Here's something I didn't know a thing about. HF Part 15 Stations operating in the 13.553 - 13.567 mHz region!

http://home.att.net/~weatheradio/part15.htm

-A

(HIFER) = Acronym for "High Frequency Experimental Radio", basically the same thing as a LOWFER or MEDFER but at HF (see LF and MF Keys for more detailed explanations). "New" term coined by the LOWFER/MEDFER community to accommodate this "newly discovered" and rapidly-burgeoning field of experimentation.

No Suffix = As with the other listings these denote stations operating primarily or solely as broadcasters rather than as HIFERs, or those which include a significant broadcast-type program content in their operations.

HF Part 15 stations occupy a narrow slice of the 22 meter shortwave band in accordance with the provisions of 15.225, which specifies a field strength limit of 10,000 uV (10 mV) per meter at 30 meters from the antenna. In practice this works out to 1.8 mW transmitter output power into a 1/2 wave dipole, or 3 mW into an isotropic (0 dBi) radiator. While this power level may sound minuscule remember that by comparison, only a fraction (< 1%) of the power a 100 mW Part 15.219 AM transmitter feeds to its antenna is actually radiated by even the most 'efficient' 3 meter antenna; in fact, the amount radiated is roughly comparable what is permitted in this HF band, yet some impressive DX as well as local coverage has been achieved at MF. On this HF band, unlike Part 15 mediumwave, there is no limitation on the size or type of antenna, feedline or ground nor on power output of the transmitter, except with respect to whichever combination of antenna and power chosen is required to reach the legal limit of field strength without exceeding it (and recalling that any gain effect even if incidental, such as might result from proximity to a reflecting suface or object, would cause an increase in field strength in the direction of maximum reflection which must be taken into account). In any case while the power output allowed here is not tremendous, it is indeed enough to "work the world" based on Amateur Radio observations on similar frequencies and power levels, via the excellent ionospheric skip characteristics of the band. Local range depends of course on the receiver used, its antenna, the prevailing noise and interference levels, etc. but should be at least comparable to and probably significantly better than that of a mediumwave Part 15 station - unlike MF, at HF especially this high in frequency, there is essentially no significant groundwave component and thus a major

source of path losses is removed - local propagation is via direct wave - and also the baseline atmospheric noise level is far lower here than at mediumwave.

The other main requirement under this Rule subpart is a frequency stability of +/- 0.01% under supply voltage variations of 85 to 115% of normal at 20 C (68 F) and under temperature variations of from -20 to + 50 C (+4 to +122 F). This might tend to scare off some potential builders but it is actually only 100 ppm, which is easily achievable with any reasonably decent oscillator and power supply circuit design and good quality crystals which are readily available from a supplier such as JAN or Bomar. Another possible design example: a CB crystal for 27.120 MHz and a simple 74HCTxxx series frequency divider would give 13.56 MHz and whatever the stability of the crystal originally was, it would be doubled (drift halved) using this scheme. It is also probable that this rule really applies to commercial manufacturers seeking Type Acceptance and for the homebrewer the FCC would tolerate a lesser degree of accuracy.

Canadian RSS-210 rules, Section 6.2.2 (e) permit operation in the same band but at slightly higher field strength, 15.5 mV/m at 30 m. Their frequency stability requirements are similar. Canada also has another license-free HF band not available in the USA; 6,765 - 6,795 kHz. Field strength and frequency limits are the same as those for 13,553 -13,567 kHz.

For AM broadcasting use, assuming a standard 5 kHz max. audio frequency (10 kHz occupied bandwidth), there really is only one frequency which can be used in such a narrow band: 13,560 kHz (this leaves a 2 kHz guard band on top and likewise, on the bottom of the band as well). It is recommended, in the interest of allowing as many as possible to use the band, that those considering broadcasting here either (a) reach an equitable time-sharing or scheduling agreement with other stations to avoid mutual interference, if using AM, or (b) operate SSB (Single Sideband), which is used by many full-power HF broadcasters around the world and occupies much less bandwidth than AM does. Inasmuch as most shortwave receivers can "hear" SSB (have a BFO), this should not be a problem. Using less audio bandwidth on AM, when possible (for instance, 3.5 or 4 kHz instead of 5) can help reduce interference potential as well. Narrowband FM can also be used but unfortunately, many shortwave receivers likely to be owned by the public cannot "hear" this mode. NBFM might be better than AM though, due to less noise, for wireless studio-to-transmitter link (STL) use of this frequency range in feeding other Part 15 units on AM (MF) or FM bands (an idea originated by the author).

To the author's knowledge, no commercial manufacturer currently sells Certified transmitters for this band; or not, at least, for hobbyists/broadcasters - so it's"homebrew heaven" for those so inclined. Here is a page with some schematics to get the experimenter started. One company, MaxNet, does offer lease of Certified NBFM

transmitters for this range, at a HIGH cost, for STL/TTL use as part of a complete system of Part 15 FM's to be used along highways as sort of a commercial "TIS" setup.

Contrary to what some folks have been (erroneously) told by FCC personnel not intimately familiar with Part 15 Rules, this band is not strictly for ISM (industrial, scientific, and medical) use only; the author, in consulting with contacts in the FCC who write these Rules has learned that broadcasting here is indeed permissible (there are no written provisions to the contrary). However, United Parcel Service is planning to use this spectrum for specific applications and being a Part 15 operation as well, sharing the band and acceptance of occasional interference will necessarily be the order of the day (let's hope UPS sees it that way!) Also, those electronic anti-theft tags (RFID) found on clothes, CDs and just about everything else in stores today operate here too; you may want to avoid transmitting on this band too close to your local Mall!

The lack of experimental broadcast stations operating here is truly amazing, considering the relatively generous field strength allowance and great (world-wide!) propagation in this frequency range. This Part 15 band is available in the USA and Canada for use by people like us: hobbyists, low-power radio and broadcast enthusiasts, and experimenters; not many people in other countries are so lucky, and in the face of commercial pressures there increasingly is less and less spectrum available anywhere to the average RF experimenter - why not make good use of the band?

2. Chukkeesukkee tries weaseling out of it...HARDEEHARRHARRHARRR!!!

Only your fellow criminals see it your way chukkee...thats why you
garbage got yanked on QRZ.com.

You totally denied EVER selling illegal equipment. Then you got popped
via the archives. LIAR LIAR CHUKKEESUKKEE LIAR!!!

And anyway, the business wasn't worth the trouble because you are too
stupid to run a business.

I suppose you are gonna deny you live with your mommy, too. You are a
hopeless failure, Chukkeesukkee...hopeless. And you know it in your
fat, ugly socially mutated heart.

Hey Chukee...
You liar, you said on QRZ that you NEVER sold illegal stuff. WHEN does not matter. You were proven a liar again. Just like your CCW permit and just like denying you threatened N8's family, just like when you said you work for Roush racing. just like when you said you were in the latin Counts, just like when you said you were buddies with the iron coffins. Liar, liar, Chukkeesukkee liar.

An sissy mentally disturbed weenie of the 1st degree. Everyone here knows it.

You were a failure in business because you are a fat disgusting mentally disturbed failure in life.

I suppose next you will deny that you live with your mommy, too.

LIAR LIAR CHUKKEESUKKEE LIAR!!!!

Scott are you that dumb or you just playin? his suggestion was for post
regarding part 15
If you don't mention something related to part 15 then you don't have to add
anything.
How many threads are related to part 15 to start a new group?

> Sounded like a whine to me. I suggested a new group just for part 15.

I suggested you quit your crying.

> That's more constructive then forcing people to put "P15" in their subject
line.

How is he forcing anyone to do anything he made a suggestion, to help
identify part15 discussions
same as you would if you listed an item for sale and used FS, or listed and
auction as FA, or listed Off topic as OT.

My statement has no indications what so ever of looking to start a fight. I inquired as to what exactly his status was, and made the comment that, through his writing style, the particular post I was reply to made him sound like one of these types of people. I can see that you clearly sound like one as well. It's too bad that somehow you managed to get through my filer on this group, which incidentally, I make great use of. Thus, your comments about filters, to the contrary, are null...

Not entirely true. One may obtain nearly 100 watts EIRP with tradeoffs
between output power and antenna gain in certain bands. Check out the
following site for more information:
http://www.qsl.net/kb9mwr/projects/wireless/part15.html

Interesting reading, huh?

If it doesn't work any better on 21 than it does on 28 we have nothing to
worry about. Man, that receiver is a pile of crap.

> was, it would be doubled (drift halved) using this scheme.

**** END DANGER, WILL ROBINSON ****

uhhhh ... the stability of the crystal would be doubled? Run that one by me again. Which, in parts per million, is the greater error - 1,000 Hz at 10 MHz or 100 Hz at 1 MHz? True, the error, in Hz, would be less at the lower frequency, but the requirement of 100 ppm would also imply that the error, in Hz, would also have to be HALF the maximum error at the higher frequency. Simple enough, but you yourself know the dangers in believing everything you see posted on the internet. There are folks that believe 100 Hz at 1 MHz is 10 times more accurate in PPM that 1000 Hz at 10 MHz. Oh well. Now, if that crystal would just swing!

Are you certain tubes would be simpler? You can buy a dds on a chip - come to think of it, you can buy whole sections of radios on a chip. I'm not convinced that tubes would be 'easier' at all.

> 21mhz mode. :) any body tried this? does it work? does it work well?
> "just wonderin......" gunslinger

You deserve a better answer than I gave you. Without having the schematic in front of me or the mod you have, I would venture the following:

1) Fiddling with PLLs is so common, it would be no surprise that someone figured out how to do this one. So one part of the rig is now tuned to 21. If that is all there is to it, the mod won't work worth squat, because:

2) on the transmit side there almost has to be a tuned (sort of) circuit somewhere coming out of the mixer to suppress the LO and i.f. sideband signals from coming out and this would take re-tuning to get up some drive not to mention suppress crud. There may be similar problems downstream. The finals may be broadbanded but not everything can be. This is a really big excursion to ask a tuned circuit to make. And, of course, harmonic traps, etc are now along for the ride.

3) on the receive side, and this rig's receiver is a laugh to begin with, there has to be some front-end selectivity to keep the input to the mixer somewhere on freq. Usually these are bandpass filters which while fairly wide ain't that wide. So to do it right would take some work. Leaving it stock would add to this receiver's well-known problems the sensitivity of a brick.

All told, without some rebuilding the effect of the mod would seem to make the freq display read 21.305 and precious little else.

And this is a problem even within a more restricted range. The Cobras that seem to wander thru the spectrum at will have similar diseases and are basically laughable as communications devices although they are not bad by CB standards in their design range. Things just sorta poop out. By the time this or any other rig got to 21 it would really be pooped out.

Like a lot of technicianing, the three rules apply:

1. Know when to quit.
2. Know when never to begin
3. Do not try to outengineer the builder armed with two fanzines and a parts catalog.

Dick, you are right. As you mentioned, the Chief-to-Indian ration has gone bezerk. We had a stuporvisor we called Ken Clueless (unfortunately, my boss at the time). He handed the people the wrong rate card (someone else's rate card). One of the office denizens who also worked for Mr. Clueless, was very hard to find. It took them a YEAR AND A HALF to discover that he showed up for work at 7:30 AM and would be gone by 8:30 or 9:00 AM. Yep, for a year and a half he was paid for 40 hours but only worked 5 to 8 hours a week! The whole thing is unbelievable. I wrote some software for some machines and waited for the approval. We were running it, but the documentation never came. Finally, documentation was released, but it was not correct! (yep, one guy does the work, someone else writes the documentation). I asked for clarification; i.e. do they want me to change the program to conform to the documentation or what? You guessed it; now they want me to do the documentation (which should have been the case in the first place). Sigh. Yep, in the 70s, you paid off Social Insecurity by July. Now .... maybe you do, maybe you don't. Usually, you don't. As for the guy who was paid for not working for a year and a half, they fired him. Had I been in management, I would have kept him another 24 hours so I could fire his boss first. That boss, although removed from supervising back 3 years ago was making in the mid 80s then - and has received raises since! Nice little country club they've got going. You're right, however, about us not knowing the grief our parents knew ... Unfortunately, I agree with your apprisal as to where we are headed. I'd give it another 15 years or so and we may well be another has - been country. Hope I'm wrong.

there very well might be, but I can tell you, from a design standpoint,
the radio will nto work there very well at all (roughly about 5% of what
it would where it was designed to operate. too many L-C circuits would
have to be changed and too many other circuits modified to make it
practical (economically or otherwise).

Gee. I'm sorry Mr. Did I hit a soft spot. You really should seek some help. You are so full of aggression. Maybe you just need to relax over a nice home-cooked meal. Some say that accupuncture can resolve these issues.
I also notice that you tend to capitolize words that don't need to be. Is this because you are yelling or do you suffer from Terrets Syndrome. If in fact it is Terrets, there is medication that may help calm that down a tad.
Also, you seem to have changed all of my wording from its original state. This really serves you in no way because the people here will read what I wrote first and they will know that it was your own filthy, twisted, medical needing mind that came up with it all.
Well you have a good day, and if I can help out at all I will certainly try.

Yep, they are cbers who operate illegally, freeload, bootleg and
pirate radio on bands they have no license for.

Yep - just like the 5 Hams that got notices from the FCC for operating illegally in the CB band. The difference is that ALL Hams should know better - many CBers have never read the regulations.

And there are many more Hams that create as much havoc on the CB band as they can.

There are legal and illegal operators in both groups.

Since I didn't write the material you might want to take up your
concerns with the authors of the page. However we are glad to have
you around to ensure the technical accuracy of material posted in the

NG. So what about the HIFER concept itself? Ever heard of it before? Could 2 way comms over some distance be viable with such a setup? Know of any existing circuits suitable for application? How about sharing the band segment with UPS? Lots of other material to chew on within that page.

-A

One of the classic stories in the insurance biz is the actuary at the old Insurance Company of America (INA, now part of Cigna if that even exists) who decided that teachers made good, pre-underwritten risks and ran his own company, Horace Mann, from his desk at INA for years.

I am not preaching gloom and doom so much as the power of demographics and generational conflict. Being on the leading edge of the post-war baby boom had its good points although us tweeners knew we would never be allowed to retire gracefully. But at no time in our history did we have so high a proportion of population doing useful things (more or less) with so few dependents and hangers-on.

I didn't like Boomers 40 years ago and I don't like them now. But I don't have to bury them.

That's because, generally speaking, the audio quality on AM, from most
Icom radios, is fair to poor. You really have to know what you're doing
to make them sound acceptable. The AM out of a Yaesu FT 101 or FT 757
series radios is almost indistiguishable from a standard CB. That's why
there are more Yaesu's on 11 meters than any other ham radio.

Ah! I was figuring you were going for that "Bootlegger = Neanderthal"
comparison, where survival depended on being the biggest and baddest. A
sort of social comparison between primative cultures and the modern CB
redneck.

I'd be curious how one of those looks on the spectrum analyzer. Is it
just as dirty as the 2970's etc.?
How about frequency stability? Galaxies are noted for drifting, which is
probably not an issue for an AM/FM rig, but will be for the all mode.

Replace the echo with a good speech processor, and it'd be a winner
IMHO.

Not to mention that the audio amp chip, has been discontinued (for quite
some time) and is generally no longer available. Keep this in mind if
you contemplate pushing the modulation. If the chip blows, you can
either try to retrofit a newer chip (can be done, but could take some
time), or relegate the rig to paperweight status.

You're asking $375, but it's firm? Anyway, at that price this must be
troll bait, or a typo. Nobody is dumb enough to pay $375 for a 2970.

I have found those little pill amps to deliver very clean signals through out 10-80. they are wide band by nature and will deliver good service if powered and driven correctly. Their no tune makes freq. change a snap until you get your main amp. on line

Unlicensed CB-type communications is commonly found in the
5,6,8,10,12, & 15 mHz bands. Most of it originates from the
USA and is land based communications. HF comms equipment
is sold throughout the U.S., and maritime equipment is particularly
popular with these "freebanders." The enforcement authority in the
U.S. is the FCC, which closed down all its monitoring facilities
six years ago. The FCC feels by pretending there is no problem that
they will not have to deal with it. Meanwhile, the problem grows
larger each year. My company is licensed to use HF freqs., and we
are jammed all the time by HF freebanders in the 6, 8 & 10 mhz
bands.

None of these frequencies are "freebands". That is a cb myth. All
those frequencies are allocated to other services and require the
proper FCC license or permit to operate on them.

well 6/ 8 and 10 mhz......thats not the free band freqs that we operate in any way.and to the earlier question .....yes there are also those who operate in the 25 mhz band.which is basically totally unused these days. you will occasionally hear operators on these freqs. some times the "skip" quality is very good because the band is virtually silent.generally.the easily modified galaxy,superstar,and r.c.i. radios are designed to take advantage of these bands. 25mhz,26,mhz,27mhz. the manufacturers know this,and continue to market radios that are modifiable by anyone.(ie;simple "plug and play" designs) the radios are sold un-modified,which makes them "legal" 10 meter rigs. what the owner does after the sale....is the operators business. gunslinger

Maybe not the right word for it, i guess so. But is'nt there any more
specific detailed info regarding the use of
frequencies by "Illegal CB-wannabe's" ???
Maybe that were more accurate.
Since the 27.555 is commonly used for USB-calling, along with 26.285, what
else, further down ?
Somebody has to know something, or is the 27Mhz area the only one with long
tradition ??

T.

BULLSHIT! multiple complaints are filed. The "unmanned"
system is a joke, just that, it is never manned and broke most of
the time. One give a shit jackass sitting in Laurel MD is not and
never will be "monitoring." Last year an unlicensed pirate
station operated within five miles of Laurel MD for months, and the
wizards at the "unmanned" facility never detected it. A collection
of flashing lights, bells, and computer screens set up just to impress
visiting congressman and other fools. Monitoring? Never!

may build one such device yearly for personal use. <<

>Not according to Skipp! He has a license to use an amp on services
between 26 and 54MHz! But for some reason he won't answer the simple
question: What services between 25 and 34MHz (24 and 35MHz?) are allowed
to manufacture and market power RF amplifiers? < <

Education time.....radio "services" aren;t in the business of
manufacturing anything.

>Hey Skipp, there is such thing as an honest mistake, <

Agreed, but your laughable "A0=" chickiehawk/aaron scratch is due your
technical incompetence rather than a mere honest mistake. The word or
meaning of "honest" isn't to be found among your limited virtues.

>but claiming you have a license that contradicts federal law is a
stretch. Care to respond? Or will you, like the rest of the BS shoveling
outlaws in this newsgroup, ignore this challenge to your integrity?<

Hmmm......that's exactly what Muenzler did. He took this "policing" of
the airwaves too serious and realized he was skating on very thin ice
using the ARRL name to put forth lies for his own personal agenda.
Couple this with his quick re-wording of what he self-professes to be
(he is no longer an "Offical FCC Observer, but merely a volunteer with
the ARRL who records information and relays it to the FCC.) and it
appears that for some unknown reason he abrubtly ceased to refer to
himself as "Offical FCC Observer." And just think, Frank, he didn't even
need a challenge, just a tiny nudge and he about went over that cliff
head first he is perched so precariously on. Since he is now in the good
company of yourself and Lelnad, it can be presumed he will eventually
leap and find himself among the rodents and bottom feeders of amateur
radio. How many chances does the ARRL give before they send out that
letter that" thanks" the participant for all their efforts and
contributions and then informs the recepient that their services are no
longer needed or required? I bet not more than one, should they continue
to receive multiple complaints. Isn't this akin to "ratting out"?
The difference, Frank ma' boy, is "you" claiming anything about
"integrity", is taken for what it was solicited and paid for.

>Sparky, I simply posted my point of view. You can agree or disagree with whatever it is that i say on any given post. That is your option and your right.
As to my comments, i think that they are pretty self-explanatory. I am of the belief that radiated power should be kept "in-band" regardless of the frequencies used. Since most "hacking" (especially of amps) results in an even greater amount of distortion, i do agree with "hams" that this should be left up to people that are qualified to make such modifications and have both the know-how and test equipment to do it correctly.
I also agree with quite a few of the ham's here that think that the mass majority of cb type amps on the market are JUNK. This is especially true of many "competition" style amps i.e the Dominators / Real Deal's, Skullcracka's, Foxie, Storm, etc... Many of the more commercially available amps such as TNT / Comet / Silver Eagles, Gray, etc... and the "generic" amps produced under the names of Palomar, Boomer, Superstar, Shooting Star, Cobra, Galaxy, etc.. are all under-designed pieces of crap that should be avoided. Other examples of products that should be avoided are similar to the one shown in the pictures that started this thread i.e. one-off "customized" pieces that show a lack of basic understanding and the knowledge of how to properly achieve greater output without compromising the product to a great degree. Whether or not you agree with this point of view is up to you. Whether or not others support or disapprove of this point of view is up to them. Let them speak for themselves as to what they find pertinent to any conversation or thread. Even if the mass majority of folks here don't agree with me and don't want to hear my opinion, i can still post it here no matter what. One does not need a vote of popular approval to post here as can be evidenced by the mass majority of chaos that takes place here. Sean
"Sparky" <sparky@cet.com> wrote in message
news:3d1ee51e.275229@news.cet.com... <

Not much to disagree with, especially where spectral purity is concerned. As far as owning a Palomar.......guilty...can't help it, the thing was perfect for the boat and from what I was told, can actually make for a driver that may work for some of the smaller amps. Hell, it's how I talked to Moses this weekend.....sounds like.....Gigahertz.

And I assumed as much; that is pretty consistent with what I have seen.

It is the receiver section where most of these things fail, simply because the cost of a decent front end is a bit steep if you are selling them to people who wouldn't know a good receiver if it fell on their toes so the Marketing Gnomes and Accounting Trolls are in full control.

Ranger is a Chinese company and like it or not China gets to produce basically commodity equipment. Farming production is fairly common in the electronics biz but if a Yaesu or Icom or Kenwood or Sony or whatever is going to stay in Japan and have production facilities they build the high value-added stuff at home and build their Belchfire line for Walmart in China. They really have to do this because the alternative is to have copies available in Guandong Province 24 hours after it is put into production there.

Doesn't seem like much until you realize that Chinese engineers do not themselves use this gear or anything like it. Korea is the same to a lesser extent. So you see Sharp make one of their periodic goobers with their carosel (a stupid idea, really) and you have visions of the grand Poobah at Goldstar threatening doom if it happens to them. So the next year Goldstar has carosel drives that would winch your cabin cruiser out of its moorings. Yes, there are some first-rate engineers in China but they work for the military much as they do here.

Japan does not have a military establishment that will pay first-rate prices for first-rate unusual gear and China's Army would not know first rate gear if it hit them in the head. So they do not have a Ten-tec, a Rockwell Collins, or any of the pacemakers. Nor for that matter do they have much of an Amateur Service where a lot of strange things get tried and out of the failures come gems.

There probably has never been a good front-end built on a commercial basis in China nor are the parts available to do it. So what you are seeing with the 2950 et al is a learning experience using essentially cheap CB

concepts to build a market. That is what is available.

So I would suspect the front-end bandpass filters are fairly tight in the attempt to protect a spongy front-end as well as can be. And if the unit has an attenuator on the front panel, it is a real fair bet this is the case. These units fail with what is called an 'intercept point' which is a measure of its ability to handle strong signals near a weaker one, sometimes on adjacent channels. The Ranger rigs would need to shape up a lot to be called fair-to-poor in a ham band dogpile.

Any frequency excursion like this whether Ranger or anyone else is going to require some serious attention to the receiver bandpass filters. These things are typically switched in and out, a lot of times automatically. Even the cheapo SW receivers switch from the ferrite loopstick antenna to the whip at about 7 MHz so it is nothing all that new but it really helps if it is already built in.

As I suspect you suspected when you asked the question, getting the LEDs to read 21 MHz is the easy part. Getting output power and hearing anyone takes some moxie.

Take it easy!

The best suggestion I can make is to get something like the Sony 7600 that can tune these freqs and do a comparative listen from where you live.

As this sort of thing is quite illegal, isn't it expecting a bit too much to see it advertised??

they shoukld be given hugher priority?

If you expect things to happen by themselves you are seeing the
results of such waiting.

>One give a shit jackass

Your command of the English language is exquisite....

If you think someone is not doing his job, file a complaint with the
Inspector General.

>sitting in Laurel MD is not and never will be "monitoring."

Depends what you call "monitoring". If you are thinking of the
classic "cruising" where someone is spinning the dial up anf doen
the bands looking for signals that shouldn't be there, forget it
with present staffing.. The Congress was very clear in its slashing
of posiitions in 1996 that they are not interested in spending money
on radio enforcement, especially the manpower necessary to do cruising
as compared to folks who deal with wireline carrier competition, media
conglomeration, and getting new non-licensed wireless gadgets into the
hands of the know-nothing public.

The system is designed and used for long-range spot-frequency
HF DF-ing on call, so to speak, and for HF band occupancy
studies in connection with international surveys.

Is your problem that you don't have an on-call priority like the
military and Federal law enforcement folks do?

>Last year an unlicensed pirate station operated within five miles of
>Laurel MD for months, and the wizards at the "unmanned" facility never
>detected it.

Pirate in what service? If it was that close to the station the
case would have been in the jurisdictionof the field investigator
(single) for action as appropriate depending on the priority assigned
which depends on where in the spectrum the signal is and who filed the
complaint.

>A collection
>of flashing lights, bells, and computer screens set up just to impress
>visiting congressman and other fools.

Are you a salesman for Zrta Systems who were POed because we
didn't buy their DoD-overrun packages (as I and several others
had recommended)?

My man at Laurel assures me that the system works very well for
its intended purpose - long range HF DF to the precision to put a
mobile DF unit close enough, or for sitting on a specific frequency
for a specific purpose.

>Monitoring? Never!

Or at least until The Congress breaks loose the funds for
cruising.

Hmmm......that's exactly what Muenzler did. He took this "policing" of
the airwaves too serious and realized he was skating on very thin ice
using the ARRL name to put forth lies for his own personal agenda.
Couple this with his quick re-wording of what he self-professes to be
(he is no longer an "Offical FCC Observer, but merely a volunteer with
the ARRL who records information and relays it to the FCC.) and it
appears that for some unknown reason he abrubtly ceased to refer to
himself as "Offical FCC Observer.

.....
.....
.....

Twithed is states clearly at times, they may be required to gather evidance
for the FCC

" Description: Official Observer

The Official Observer program has been sponsored by the League for more than
50 years to help amateurs help each other. Official Observer appointees have
assisted thousands of amateurs to maintain their transmitting equipment and
operating procedures in compliance with the regulations. The object of the
OO program is to notify amateurs by mail of operating/technical
irregularities before they come to the attention of the FCC.

The OO is also the backbone of the Amateur Auxiliary to the FCC. OOs are
certified in the Auxiliary by passing a mandatory written examination.

The OO performs his function by listening rather than transmitting, keeping
an ear out for such things as frequency instability, harmonics, hum, key
clicks, broad signals, distorted audio, over deviation, out-of-band
operation, etc. The OO completes his task once the notification card is
sent.

In hard-core rules violations cases, OOs refer problems to higher echelons
of the Amateur Auxiliary, and may be requested to gather evidence for
possible FCC enforcement actions.

I have a MINT, case never opened up, NEVER MESSED with, Radio Shack TRC-457 base SSB CB. It is a stock 40 Channel, but can be modified to go 26-29mhz. I also have the modification instructions from SECRET CB. It takes 3 switches and some wire, basically to do it.

This is a Classic 1977 Vintage radio with the Uniden 858 PLL chip in it.

Comes with a Radio Shack amplified desk mike.

The radio is 9.8 on a scale of 1 to 10..no bull...excellent shape..

I will take 150 bucks for it...

email n8wwm@aol.com

If yer in Chicago area you can come pick it up.

Keep thinking that there isn't anyone in MD listening.
I witnessed a freebander in Houston get busted using the monitoring system . When a fcc field agent shows up at Your door with the local law enforcement behind him and notes of what times You were operating and the content of Your conversation , You have to wonder where He got all this information . And also the fact that He shows up an hour after Your gone to bed . Then You get a letter from the fcc wanting You to explain Your actions of the allegations against You as evidence in the monitoring facilities .
Also suggesting the charges levied to be " Operating on frequencies designated for Department of Defense" Yes , That's right D.O.D ! Any frequency not being used for a specific purpose is automatically designated for the department of defense.
The fcc's monitoring station is very elaborate and can track a signal down within 5 seconds and 5 feet of the station. The good news is , there is not enough money in cb to pursuit and Riley Hollingsworth was not hired to chase down CBers.
Now considering today's events taking place around the world , I would be very careful where I went and what I said on those "freeband" frequencies.
Oh and the frequency this Guy got busted on was 27.565

The VE at a test session is allowed to keep $4.00 out of the $10.50 charged by the fcc and arrl
"Twistedhed" <twistedhed@webtv.net> wrote in message news:23901-3D1B28A7-130@storefull-2311.public.lawson.webtv.net...
From: oris@dirtball.com (Oris)
Most local cops don't even know cb exists anymore (nor care), let alone there is a statute allowing them to enforce certain aspects of it.

>Well that is a power play. The cops here in GA know. The cops in Franklin CO have amps for CB radio in their POVs as well as their police cruisers.<

Yea, some know and some may care.
In a large metro area or city, cb doesn't even exist as far as the law is concerned, unless it presents itself in a negative light.

> One or two of them have bad ass stations. Who is going to bust them? Once they find out you can bet they along with local governments are going to try and take control. I have already heard stories about so of the police in texas busting illegal CB stations right and left. <

Yea, I read the thread too, but that's all they are...stories. Take notice that when pressed for details, the origin of these stories clammed up.

As always, there are bound to be exceptions, and no doubt, we wil hear of them as they occur. Any sooner and it will be play-by-play.

>This will be based on the CB station operator. If he can get his station clean enough not to bother his neighbors TV's VCR's Radios and Telephones there should be no problem with the local police department. No madder what rule he or she breaks.<

I tend to agree with this, but clean stations can and do still leak RF. Scratch that....lemme put it this way....poorly designed consumer devices are still prone to receiving interference from the cleanest stations. Even if the burden IS on the owner of the cheap device, it doesn't stop them from initially lodging a complaint.

As far as ham radio is concerned, when they stop charging a fee for licensing is when the enforcement will suffer. The cash is the only reason any enforcement exists now.

>That statement is false the fee that they charge for testing is for the test itself. The VE can not be paid in any matter for what he or she is doing. Fees for test would not even put a dent in the FCC's budget <

I dunno. I don't believe the physical tests cost that much to reproduce...mere pennies is more like it. Considering they are using VOLUNTEER administrators, that is quite a tidy sum when all added up. I believe the FCC would definitely miss that cash cow, for the time being.

Sooner or later, the hammie spectrum
will be just like cb..only the safety pissers and extreme violators will be problematic.

> Well I would welcome how 'bout it skip land or DX land. I think that that is more fun then calling CQ in real terms CQ is a morse code call. The proper voice term is seek you on my radio. Calling Seek You Calling Seek You. The proper end greeting is 73 not 73es the think there is 73es has creeped into the ham bands.<

Old habits die hard.

> THe language has changed over the years and as more people test in (you know that to test in now days isn't that difficult) the lingo and terminology will change. So I look forward to a time when Seek you skip land will be the status quo.<

You aren't alone. Hell, even many hammies are asking for ham radio to ease up..witness the no-code non-phenomenon.

Hi all. This is actually a friends of mine email address. Here is the thing, on all the CB channels on my radio, there is like 5-9 pounds of constant noise. Not the typical CB traffic noise, but more like an interference static transformy type of noise. you know like when an FM station is just noise. As I go up in frequency outside the CB range, the noise gets less and less, and around 28 mhz, it is significantly reduced. Is anyone else on the east coast noticing that there is more noise than usual? Esepcially on the CB range? I have been into radios for awhile, and this is something I've never heard, It even drowns out the typical sideband stuff you hear on channels 37 and 38. Yikes.

Perhaps someone has more knowlege than I do on this and can offer a better time frame. I believe the FCC started shutting down facilities a long time before six years ago. We had a monitoring facility near Rochester, NY - it was located in Canadagua, which is only 25 miles or so from here. The FCC used to be a powerful government agency which DID enforce the regulations. I don't know what the extent its' monitoring facilities are, but there are FAR fewer FCC field agents than existed in the 60s. Anyone have info on this?

Source record: 129081

According to what i've been told, these units are spectrally pure up to about 125 watts of output. I was seeing very nice looking waveforms at output levels WAY, WAY above that on my scope. For the record, my scope has recently been calibrated and reads quite linearly to above 125 MHz. If the circuitry was looking "funky", i can see it.

As to the problem with frequency drift, this uses the newer 6900 board. This board is infinitely more stable than the earlier and still current 3600 boards used in the 33 / 44 / 55 / 66 / 73 / 77 / 88 / 99 series radios. The 6900's did show a small amount of drift when used in the 12 bank radios but this is only an 8 bank unit. If you've ever played around with any of their other radios, the basic board is the same as the DX 2517 base radios.

As to substituting the echo with a speech processor, that would be both a waste of time and money. Echo's can increase intelligibility if properly set. A speech processor does nothing but raise the average level of audio and clip off the peaks. This same feat can be easily achieved by working the circuitry that is already present within the radio. In my opinion, the generic speech processors that i've seen installed in more than a few radios are one of the most over-rated products on the market. Just ask Cobra how well their "speech processor" aka "Soundtracker" worked for them. The fact that they have pulled this "feature" out of most of their radios should tell you something. Sean

Are any of you interested in turning this forum into something that can be used for educational purposes ? Would you prefer to be thought of as someone that helped people do the right thing or as someone that only preached condemnation and pushed them away from getting their license ? I think you know what i'm getting at. You can catch a lot more flies with honey than you can with vinegar.

As such, how many of you are willing to contribute to threads in a manner that may help cber's learn from and possibly even look up to the Amateur community ? If you want people to do what is "right", you have to help them to understand why the things that they are doing are "wrong". In order to do that, you have to educate them and explain things along the way. If you are willing to do something like that, please make it known. I encourage those of you that want to make things "better" to use your personal along with your call sign.

I'm sure that there are more than a few folks that post and read here that could easily end up being respected members of the Amateur radio ranks if properly nurtured. Even if some / most of these people don't become licensed amateurs, they will have at least gained knowledge as to what the TRUE nature of the Amateur community is about. Do us all a favor and become an "Elmer". Everyone like's an "Elmer" more than they do a "Peckerhead". While i know that there are more than a few "Peckerhead's" on each side of the fence, it won't be hard to tell them apart from the people that really do care once we can get going. That is, IF we can get things going. Sean

It's about time they cleaned up thier radios.

>As to substituting the echo with a speech processor, that would be both a
>waste of time and money.

This I disagree with.

>Echo's can increase intelligibility if properly
>set.

Sean, You've hit a sore spot here with me, I *VERY STRONGLY* disgree
with this... The *ONLY* thing I've *EVER* noticed with echo, is it
makes a station sound like crap. How in the heck, do you get that an
echo can make one sound good. It can't. It only makes you sound
horrible! I don't care HOW you set it... Echo is a "noise toy"!
Period. It serves no purpose, except to annoy people. what valuable
purpose does it have in a CB? None, just another TOY!

> A speech processor does nothing but raise the average level of audio
>and clip off the peaks.

Okay, I'll buy the first part. I use the processor in my Kenwood
TS-950SDX... It gives me a bit more punch to get over the static on 75
meters. Plus it enables me to drive the rig to full power, when I use
my Heil Headset. (I own a pro-set plus... which I use all the time...
great mic... Not a RE-27 or anything... but works well for what I
need.... http://www.heilsound.com)

>This same feat can be easily achieved by working
>the circuitry that is already present within the radio.

Bzzzzzzzzzzzzzzzzz... Wrong. Not all radios, Like those of the "CB"
nature have good audio circuit's... Of course, we're talking about
radios, that most people take and cut the mod limiter. Which in some
cases is a good thing... you ever heard a cobra with the mod limiter
in it??? Now... I've heard your galaxy/ranger type radios, when you
cut the limiter it can harm the audio circuit.

>In my opinion, the >generic speech processors that i've seen installed
>in more than a few radios are one of the most
>over-rated products on the market. Just ask Cobra how
>well their "speech processor" aka "Soundtracker" worked for them. The fact
>that they have pulled this "feature" out of most of their radios should tell
>you something.

well, *chuckle* that's because it was a piss poor design! You ever sit
and looked at that soundtracker shit on a scope... those guys had this
wild idea, "we'll put a propiertary sound processing circuit in our
radios and everyone will buy our radios to be able to use it" and look
what it got them, nowhere!

If Cobra, Galaxy, Ranger, Ect... wants to do something smart. They
need to sit down with the engineers over at kenwood, Yaesu or Icom and
ask them, "How can we build our radios better?" and... possibly have
one of these guys start building thier radios for them... The problem
with galaxy/ranger/connex bunch is thier wanting to market a 10 meter
radio that is convertable for the 11 meter band, and kenwood won't
even think of going near that sort of a market, as they would tarnish
thier image to the Ham Radio crowd.

While were on the subject...:

I really wish Texas Star would stop building these Sudo-10 meter
transmitters, and start building some REAL Amps, for the Ham Radio
Community, Believe me, right now, Ameritron/MFJ has that market
cornered. and if Outcomm were smart, they'd clean up thier design, put
some filtering in those boxes. Add bandswitching, Tuned inputs, a jack
for line keying... and make the 10 meter optional.. (with mods
available to license holders...) and believe me, they could sell a TON
of the boxes... I wouldn't use the Texas Star name, as people would
associcate it with CB... But right now, currently, there are no Full
Legal Limit boxes for mobile use... I realize there is alot more to
it. But it could be done... they just have to apply themselves and
that could make a great product.

enjoyed your post and for a change it's great to see some posts in
here that are above the troll level...

73 to you Sean.

It all depends on how tall you would want to go... myself, I've use
with good success... 8ft Francis, 102' steel whips... I would stay
away from firesticks... can't handle power, Skipshooters, I'm told
work well.. 102' whips work well, they can handle power, and they bend
in the wind easy. A spring helps...

hope this helps.

Other than a pic in the July 02 QST I have never heard of one and his is homebrew. He uses it on a 1200 sq ft steel roof in Richmond VA. If you are talking about a vehicle roof, be sure the thing is not so strong that it becomes easier to remove the roof.

Hi Dave,

I'll take your word for it re. the AM. I bailed out of the AM scene approx. 25 to 30 seconds after receiving my first SSB rig back in 1978. (A Royce 1-639.) In the mid 80's, most of ham rigs that I QSO'd with were of the Yaesu FT-757GX or Kenwood TS-140S variety. I think I remember one fellow with a IC-735, but he was about the ONLY one. Oh well, like I said...ancient history. I have an unmodded FT-840 now and have only heard of two other guys using them on 11-meters. Tim and a local Long Islander. I do wish the FT-840 had a green/blue display as opposed to the standard amber one. It'd be much easier on the eyes, IMHO. I really am not inclined to open her up to change anything at this point, so amber she'll stay. Hope you and your family/friends have a safe and happy Independence day.

If you're a serious SSBer, then things change a bit. Back in the 70's, most Kenwood rigs didn't even have AM in them, so only the serious SSBers ran Kenwoods like the TS 520 and 820. Icoms are also excellent SSB rigs (It's what most hams use anyway). The IC 735 had one of the best receivers out there for its time, and even now. They worked great on SSB. Just don't use them on AM, if you want quality sounding audio.

I guess it all depended on what type of operating you did and how you felt about your equipment. Many people bought the FT-101's because they used both AM and SSB, and felt that if they were buying such an expensive rig, that it better work great on both modes. Other people, didn't mind switching rigs, in a pinch, to work occasional AM.

I much prefered the lack of noise and hetrodyne of SSB, but most of my friends hung out on AM, so I usually did too.

Is it a Spectrum analyzer or an oscilloscope? While an O'scope can show
major harmonic and spurious emissions as "fuzz" on the modulation, you
really can't see the individual distortion products or tell accurately
how strong they are.

That's good news. Trying to "fix" the inherent design flaws of the older
boards is not very cost effective, (Xtal ovens help) and it is sure
annoying to guys running SSB. The easiest and cheapest workaround has
been to open the fine clarifier, and tell people to deal with it.

>
> As to substituting the echo with a speech processor, that would be both a
> waste of time and money.

That depends on what you're looking for in audio quality.

> Echo's can increase intelligibility if properly set.

Key words: "If properly set". I can safely say that I've never heard
someone running an echo that has it "properly set". All they manage to
do is create the sound of someone in a tunnel. I don't believe that the
dime store CB echo units are even capable of a decent reverberation
effect similar to what was popular on some broadcast stations in the
60's and 70's, which DID seem to boost depth and presence of the voice.
Then again, they had broadcast engineers set them up.

> A speech processor does nothing but raise the average level of audio
> and clip off the peaks. This same feat can be easily achieved by working
> the circuitry that is already present within the radio.

True to some degree. The modulation limiter acts as a sort of speech compressor, and will achieve the effect that you've described, assuming it is allowed to function. A "good" speech processor does other wave shaping as well to minimize the distortion that results from clipping. The net result is a higher average modulation percentage, without sounding compressed.

> In my opinion, the generic speech processors that i've seen installed in more than
> a few radios are one of the most over-rated products on the market. Just ask Cobra how
> well their "speech processor" aka "Soundtracker" worked for them. The fact
> that they have pulled this "feature" out of most of their radios should tell
> you something.

The fact that a "feature" was pulled from a radio could have many meanings. The fact that a great percentage of CBers do not understand the how's and why's of proper modulation techniques, and prefer to to just crank the knob to the right as far as it will go, says more about a misunderstood feature never gaining popularity.
Personally, I've never played with a sound tracker radio. I've been out of the CB circles since I moved out of my old area a couple years back, so I don't see many radios (mostly fried) from the locals who love to run them hard. So I really don't have personal experience with ST and whether or not it really helped or was just junk. When you have marketing types designing radios rather then engineers, this can happen....

True enough. And if you remember, that's what this forum was like a few years back. Then the fights started whenever someone tried to correct "CB science" with good engineering practice. Sooner or later, things degenerate into name calling, and then the stereotypes fly, and mutual disrespect is assured.

For some reason, the perception is that CBers don't like hams, mainly because in their efforts to educate, they are seen as "preaching" or condesending. Many CBers have openly stated that they don't feel that earning a ham ticket is an achievement worth any respect despite what other credentials the "ham" may also have.

Many hams feel that CBers are reckless and lack respect for rules, whether operational or technical, and approach technical issues with a "damn the torpedos, full speed ahead" attitude rather than a more methodical, theoretical approach.

When you have these preconceived notions, it's hard to overcome them to achieve any meaningful dialogue. Once the facade of mutual back slapping becomes tired, and someone gets into a disagreement about how something should be handled, the old defenses pop up, and further constructive debate becomes useless.

>

> to understand why the things that they are doing are "wrong".

No one will understand what it is that they are doing wrong, if deep down inside, they don't believe that it's wrong in the first place. Any attempt to correct that notion only reinforces those earlier preconceptions. If someone feels that "god" gave them the right to operate as they please, or that they break selective federal laws as a form of civil disobedience, then it's going to be a hard battle to win that person over.

Then you have the guys who will religiously hold on to their "outlaw" beliefs and will do their best to undermine any attempt at credible education, sensing that success in properly educating people will threaten their own empires and will ultimately effect them both psychologically and financially, in some cases. There's a lot of money to be made by perpetuating "CB science", and education is the bane to that existance.

Technical issues usually degrade down to a "I know more than you do" arguement, with each side attempting to boost their credibility by listing their accomplishments, or their college degrees etc. One only has to dig up an old thread about coax lengths to see this in action.

> In order to do that, you have to educate them and explain things along the way. If you
> are willing to do something like that, please make it known. I encourage

> with your call sign.

Some people (and I include myself) tend to be blunt and straight to the point. This can be interpreted as copping a superior attitude, and may turn off other people, even it it was unintentional. There is a fine line between "explaining" something, and pounding it in for those that are a little slow, or stubborn.

Many CBers have expressed the opinion that they have no desire to become hams. Despite the vast increases in privileges, and spectrum, and the relative ease of the exam today, they stubbornly refuse to go the route. Now there could be many reasons for this. Many are turned off by the "ham culture", as it were, even though you can create your own culture if enough of your friends upgrade as well. Many, I suspect (although they'd never admit it), are truly afraid of the test and of failing it. Imagine the blow to one's psyche to fail, what everyone touts as, an "easy" test.
I just don't understand why someone, who enjoys the thrill of freeband DXing, who operates a ham rig, would not want to upgrade to ham radio, where the DX can be found anytime, and not just on 11 year cycles?

Hey, I agree with your proposal, but like the realist (some would say pessimist) that I am, I see too much difficulty succeeding with it. I try to offer up information to help people see things more clearly. If they understand it, great! If they refuse to accept it, then there isn't much more I can do.

In the late 60's it was learned that FCC direction finding facilities
had caused a rare interaction with the soil under the DF antennas.
Interterpolation of HF radio signals over the years with certain
bacteria's in the soil and other chemicals caused formation of rare
and little know lithium-diaganose crystals, which are highly prized on

the international market. As a public cover story, the FCC began closing down various DF sites around the country, while opening subterranean mining facilities which collected and purified the rare lithium-diaganose crystals. FCC employees who would not consent to mining the rare crystals were purged, while those who consented to being sent down in the mines were given huge promotions and bonuses for the crystals they mined. I know this sounds crazy, but I was given a rare tour of some of the subterranean mining facilities and let me tell you, these guys are making some hay! So, today, the story persists that the FCC has converted to a remote monitoring network, but we know that's not true at all, since the FCC is the sole source of lithium-diaganose crystals. Believe me, some people in the FCC are getting wealthy beyond your wildest dreams!

I think you know what i'm getting at. You can catch a lot more flies with honey than you can with vinegar. <

>>True enough. And if you remember, that's what this forum was like a few years back.<<

Yea, agreed. When Dogie came in and was denied any respect for his trashy, potty mouth a few years ago, he went berserk, and the AKC was formed, with you being part of it Dave, or did you forget your aligment with them? Say the word and I'll referesh your memory.

> Then the fights started whenever someone tried to correct "CB science" with good engineering practice.<

Dave, you are a regular piece of work...why not try injecting a little truth...and while we are on the subject of truth, why do you feel the need to lie? No Dave, just cause your memory is a false one doesn't mean that most present don't remember Dogies entrance.

> Sooner or later, things degenerate into name calling, <

How about sooner, like immediately after any off the self-professed AKC's are disagreed with.
Again, this was patented by Dogie and furthered by Frank.

>and then the stereotypes fly, and mutual disrespect is assured. <

Don't forget the lies, such as the bullsht you are attempting to sling now.

>For some reason, the perception is that CBers don't like hams, <

For some reason? I never heard that. Some cbers don't like some hammies who ignorantly claim you either obey all laws or get labeled a criminal, such as yourself.

>mainly because in their efforts to educate, they are seen as "preaching" or condesending.<

Let's see, you called many names, beginning with "criminal"to those who you have absolutely nothing to base that accusation on other than speech content. That makes you one of the "name-callers" you are hypocritically

ranting on about.

> Many CBers have openly stated that they don't feel that earning a ham ticket is an achievement worth any respect despite what other credentials the "ham" may also have. <

And "certain" hammies are obviously ego-bruised by this.
One isn't entitled to respect, Dave. One must earn it, and a license isn't any big achievment. For those that feel it is, congratulations, but when you attempt to impress that "feeling" on others, you create problems for yourself them look around for someoen to blame...how convenient, you're in a CB ng, who shall you blame?

>Many hams feel that CBers are reckless and lack respect for rules, whether operational or technical, and approach technical issues with a "damn the torpedos, full speed ahead" attitude rather than a more methodical, theoretical approach.<

Good thing most of us don't give a squat what "many" hammies feel.

>When you have these preconceived notions, it's hard to overcome them to achieve any meaningful dialogue.<

So tell us, why do you continue to perpetuate these "stereotypes" you speak of.

>Once the facade of mutual back slapping becomes tired, and someone gets into a disagreement about how something should be handled, the old defenses pop up, and further constructive debate becomes useless.<

Well, why don't you do a statistical search and see where the names come from. Between George and Frank, they have that type behavior locked up at a ratio of like 7 to 1.
Drone on Dave, drone on.

>>As such, how many of you are willing to contribute to threads in a manner that may help cber's learn from and possibly even look up to the Amateur community ? If you want people to do what is "right", you have to help them to understand why the things that they are doing are "wrong". <<

>No one will understand what it is that they are doing wrong, if deep down inside, they don't believe that it's wrong in the first place.<

Such as you holding that anyone that doesn't see it "Your" way is not socially responsible?
Such as we all have a duty to remain ethically
bound to morals the way YOU see fit? No, Dave, it doesn't work that way at all.

Any attempt to correct that notion only >reinforces those earlier preconceptions. If someone feels that "god" gave them the right to operate as they please, or that they break selective federal laws as a form of civil disobedience, then it's going to be a hard battle to win

that person over. <

You highlight my point perfectly, esconcing the fact that you see a battle,,a fight...something to be "won or lost" between cb and hammie radio..it is thinking like your own that does more to separate such hobbys.

>Then you have the guys who will religiously hold on to their "outlaw" beliefs and will do their best to undermine any attempt at credible education, sensing that success in properly educating people will threaten their own empires and will ultimately effect them both psychologically and financially, in some cases. <

I notice you intentionally left out any wrongdoing by any hammies. Why is it so diffcult for people as yourself to present a balanced side of an argument and let the masses make up their own minds? I'll tell you why, the same reason you had to retreat to posting under a pseudonym, withholding your name...it's BS!

>There's a lot of money to be made by perpetuating "CB science", and education is the bane to that existance. <

To the point of hammies telling outright lies concerning enforcement in attempted order to intimidate cbers? Yea, we know the drll, Dave. Sorry, most cbers aren't intimidated as much as certain hammies, evidenced by our willingness to think outside the box and NOT conform to anothers picture of righteousness.

>Technical issues usually degrade down to a "I know more than you do" arguement, with each side attempting to boost their credibility by listing their accomplishments, or their college degrees etc.<

Again, you speak of Frank.

> One only has to dig up an old thread about coax lengths to see this in action. <

Or any of a shitload of Frank's post claiming his technical certificate and/or education is somehow relevant. I agree, it has no place. I must say though, your prioritie seem to be clouded along with your judgement, Hall.
Why can you set forth your ticket as a condition of an accomplishment but you feel threatened when someone does it with their education? It seems to me that a college degree or certificate means way more than your ticket, but you never cease to surprise. Holding your ticket above education is no surprise.

>>In order to do that, you have to educate them and explain things along the way. If you are willing to do something like that, please make it known. I encourage those of you that want to make things "better" to use your personal along with your call sign. <<

>Some people (and I include myself) tend to be blunt and straight to the point. This can be interpreted as copping a superior attitude, and may

turn off other people, even it it was unintentional. There is a fine line between "explaining" something, and pounding it in for those that are a little slow, or stubborn. <

Slow or stubborn to to see the light as YOU see it is a goal most have already accomplished, intentionally.

>>I'm sure that there are more than a few folks that post and read here that could easily end up being respected members of the Amateur radio ranks if properly nurtured. Even if some / most of these people don't become licensed amateurs, they will have at least gained knowledge as to what the TRUE nature of the Amateur community is about. Do us all a favor and become an "Elmer". Everyone like's an "Elmer" more than they do a "Peckerhead". While i know that there are more than a few "Peckerhead's" on each side of the fence, it won't be hard to tell them apart from the people that really do care once we can get going. That is, IF we can get things going. <<

>Many CBers have expressed the opinion that they have no desire to become hams. <

And therein lays your problem. So what?
What business is it of yours if a cber wants nothng to do with hammie radio? You just can't get over yourself.

>Despite the vast increases in privileges, and spectrum, and the relative ease of the exam today, they stubbornly refuse to go the route.<

Actually, what has unfolded here, is your
inability to comprehend why people don't see it your way. It's actually amusing the extent you go.....

> Now there could be many reasons for this. <

You don't have to understand WHY, Dave. Just accept it instead of creating such problems for yourself and others.

>Many are turned off by the "ham culture", as it were,<

No! Not as it WERE! AS it stands in HERE, as demonstrated by "hammies" such as yourself, with no regard for anyone else, unless they conform to the ways you hold dear

> even though you can create your own culture if enough of your friends upgrade as well. <

Not pertinent to cb in anyway whatsoever.

>Many, I suspect (although they'd never admit it), are truly afraid of the test and of failing it. <

And many already have a hammie license.
And many have already let one expire. Gee Dave, kinda blows your theory all to hell.

>Imagine the blow to one's psyche to fail, what everyone touts as, an "easy" test. <

That's it Dave, further insult all those who don't have a license, but you ought to try to disguise it a little better, as one can tell you are talking yourself into an anger position right before our very eyes. Is this "failing of a license" anything like how you feel due your inability to grasp why all cbers don't become hammies? Feelings of helplessness and no control? I bet it is.

>I just don't understand why someone, who enjoys the thrill of freeband DXing, who operates a ham rig, would not want to upgrade to ham radio, where the DX can be found anytime, and not just on 11 year cycles? <

That is what I have been saying all along,,,you don't understand. So what did you do when confronted with something you can't comprehend......you insulted them. This meshes nicely with your reluctance and stated dislike for change.

>Hey, I agree with your proposal, but like the realist (some would say pessimist) that I am, I see too much difficulty succeeding with it. <

Because you intentionally add to the problem. You just insulted all cbers, yet sit here and attempt to play martyr.

>I try to offer up information to help people see things more clearly.<

Most already have their views.
Most aren't interested in seeing cb the way you do, that has been proven time and time again..I think your radical views and being in the minority is taking it's toll on you.

> If they understand it, great! If they refuse to accept it, then there isn't much more I can do. <

Why, you can always come in and let loose with a string of insults and present a one sided-argument and insult all cbers like you just did.

the skip out here on the shoreline has been dead. i was able to have a short qso with "slop jar" down in the sandpile this morning,working a horizontal di-pole. but conditions were poor,and dropped out after only a couple of minutes. :(this sucks,i guess i could use my rig as a boat anchor for the time being.....at least my 2990 is heavy enough to be used for that purpose. :)
any way tell the crew in elpaso well be back soon. still out here on the ocean.....trying to catch a "wave".....talk to yah later 555 gunslinger

I am not in this group because I am a ham trying to educate, I am here
because I also enjoy the cb radio hobby and have for many years. I have my
thoughts and beliefs, like religion, if someone asks I'll share them but I
do not go shoving my opinions down someones throat.

I agree though that some benefitial discussions could be had here by all if
we could get the name calling and back biting to stop.

In closing I would like to wish all of those in this group who are American
a happy and safe 4th of July holliday.

Now THERE'S a wierdo! I've heard of this "diet" and wouldn't get near someone selling it. Especially since "Dr." Malkamus is under "cease and desist" orders in several states for making unsubstantiated claims. Anyone with half a brain would see that this "doctor" is selling nothing but snake-oils.

Where did you hear of this guy?

Dave,

Forgive the top post (you already know what you said), but I have already stopped
trying to help, for the most part, because it seems to start "fires". If someone asks
the dreaded "coax length" question, and I answer with the true dope that coax length
doesn't matter except when placing antennas in phase, it starts a long discussion of
VF and counter-claims ad infinitum. So I generally keep quiet these days except for
the most innocuous questions. I do find it hard not to respond to the
"freeband" questions, particularly where it concerns illegal operations in the ham bands.

Dave, i basically agree with many of your comments. I do have to say that many CBer's reject the information that Ham's post due to the way that the Ham's present it, not that the CBer's think it is "wrong" or "does not apply". While everybody would like to be handed a shiny red apple, nobody wants one with a nail sticking out of it.

There are a few exceptions to this rule, one of them being Bill Nelson. While i have not been here in a long time, i see that Bill is still around and doing his best to present both level headed and factual responses to much of the chaos here. As such, i think that he has truly been "accepted" by the CB crowd even though he is "one of them" (a Ham). Most of this has to do with his attitude and how things are presented, not the actual messages. If that were not the case, he would have been "rejected" as he does not promote the typical ideologies that most CBer's have adopted. As such, i think that Bill has served as a role model for both parties involved in all of the fracas. Hat's off to him for sticking it out AND doing it in a manner that befits a true gentleman.

Maybe if there were a few more hams like Bill on this group and less of the condescending and negative assholes (that is what they come across as) that tend to dominate most of the threads and represent the amateur community in a poor fashion, we might make some progress around here. After all, who likes getting slapped in the face, kneed in the groin and told that they are doing something wrong. I think that most people would prefer being told that there is a better way and have someone that will demonstrate the superiority of a slightly different approach. Since not everyone has the same level of understanding nor do we all learn at the same pace, it might take some longer than others to fully understand where we are going. Sean

I had,for years,believed that the best height for your antenna is right in a wavelength.I have heard dealers discussing it.I have had many conversations about it.Now some is telling me that wavelengths do not exist for citizen's band,only for ham bands.I just have to ask,how in God's green Earth can wavelengths exist for ham but not for citizen?And if they do exist,at what heigth are they located?I've also heard different measurements over the years?
Thank you,
Donnie

Phil, you make a good point. Years ago, I kept complaining to the City of Rochester about a property behind me. Not only were weeds growing, but there were a couple of junk cars and old tires. I kept after the city for a year - THEN I took some pictures and went to my attourney. In less than a week, city crews were there, along with a tow truck, garbage truck, and equipment to clean it up. I'd have loved to see that idiot's tax bill the next year!!! ;)

Sean wrote:
>
> Are any of you interested in turning this forum into something that can be
> used for educational purposes ?

No. I'd have to say that most of the people in this NG
have no interest in 'educational' purposes. They are here
primarily for entertainment.

Would you prefer to be thought of as
> someone that helped people do the right thing or as someone that only
> preached condemnation and pushed them away from getting their license ? I
> think you know what i'm getting at. You can catch a lot more flies with
> honey than you can with vinegar.
>
I'm not interested in 'catching flies', to start with.
Those
who want to know more about electronics (or Ham radio) will
make
an effort to do so. If 'they' are not interested, why should
I
be?

> As such, how many of you are willing to contribute to threads in a manner
> that may help cber's learn from and possibly even look up to the Amateur
> community ? If you want people to do what is "right", you have to help them
> to understand why the things that they are doing are "wrong".

If people haven't been taught the difference between right
and
wrong by the time they can figure out how to operate a
computer
and read this NG, it's a bit late. I don't think people are
quite
as 'dumb', or naive(?) as you make them out to be. There's
absolutely
nothing wrong with being uneducated. There absolutely is
something
wrong with staying that way.

In order to
> do that, you have to educate them and explain things along the way. If you
> are willing to do something like that, please make it known. I encourage
> those of you that want to make things "better" to use your personal along
> with your call sign.
>

I don't have the time or the inclination to be a
'crusader'. If
'they' want help, I am more than willing, it only takes a
question.
As far as 'making it better', what makes you think that your
idea
of 'better' is the same as mine, or the next guy's? Be
careful of
what you ask for...

> I'm sure that there are more than a few folks that post and read here that
> could easily end up being respected members of the Amateur radio ranks if
> properly nurtured.

I'm sure there are! And I'd be happy to welcome them, after
they've made the effort. The 'effort' is required, otherwise,
how do you know they're interested? If they're not
interested,
it's like trying to teach a cow to dance. You're wasting your
time, and the cow couldn't care less.

Even if some / most of these people don't become
> licensed amateurs, they will have at least gained knowledge as to what the
> TRUE nature of the Amateur community is about. Do us all a favor and become
> an "Elmer". Everyone like's an "Elmer" more than they do a "Peckerhead".
> While i know that there are more than a few "Peckerhead's" on each side of
> the fence, it won't be hard to tell them apart from the people that really
> do care once we can get going. That is, IF we can get things going. Sean
> >
I think an 'educational' NG would be a fine thing. If
that's
what you want, then I would suggest starting one, not trying
to
'take over' an existing NG that doesn't want to be 'educated'.
This NG is the way it is because the people here want it this
way. If they didn't want it to be the way it is, it would be
different. Do I want this NG to be the way it is> Not
really,
but that doesn't mean that I think it should be a 'ham' NG!
That
isn't it's stated purpose, nor do the majority of people here
want it to be. Expectations are fine, but they also have to
be
realistic (no pun intended, well, maybe a little)...

>this?

"During my time" the FCC had three types of monitoring/DF
facilities.

In the mid 1970s the "primary" at Santa Ana CA was closed and
moved to Ferndale WA, the "secondaries" at Juneau AK, Spokane WA,
Chillicothe OH, Beaumont TX and Canandaigua NY were closed,
and the FCC contingents at four "shared" sites run by another
Federal spook agency were relocated to existing FCC stations.

The property at Canandaigua was retained throigh the years
and served as a test bed for development of the remote control
system in the mid-90s. It is still "on line" remote/unmanned.

RUSTYAMERI,
Sounds like you may have some 'local' noise from
something. I think if you have a portable radio that
will pick up this noise, I'd take a walk around the
neighborhood to see if I couldn't locate it. If/when
you find it, or at least narrow things down, you have
a chance of 'curing' it.

They exist all right. The metric formula is easiest to remember
l(meters)=f(MHz)/300 which was a stock question on the Amateur Novice
license for eons.

The major reason why one might mount an antenna at one lamda (std abbr for
wavelength) is that at that height, the ground reflection effects have
steadied down and your antenna reflects its characteristic impedence etc.
In other words it tends to work like the book says it should.
And as lamda at CB freqs is about 36 feet, it is also a pretty good
compromise between performance and mechanical complexity and expense.

A few feet either way will not be noticeable.

With lambdas on several ham bands nearing the football field in length, it
is not generally a consideration to Amateurs; we pretty much play the hand
that is dealt. And at higher freqs there is no substitute for altitude.

Interesting Question.

Wavelenghts most certainly do exist for cb, the wavelength for cb is 11m.
I guess the differences is with how the different wavelenghts propogate,
i.e. vhf/uhf is line of sight.

HF uses skywave and groundwave depending on what portion.

I see some HF antennas that start right at the ground, but these are 80-160
meters using groundwave propogation.
for 11m the rules state that the tip of the antenna can be no higher than
60ft above the highest point on the property.

73 de Keith

P.S. if I am incorrect in some of this please feel free to correct me, I
never claimed to know everything, and the only way to learn is to be given
the correct information.

If you do indeed find this to be local, start with the closest
electrical pole near you. Some of these baluns get "dirty" after time
and can cause some real havoc. The power company here have fixed line
problems for me three times that I can recall...once was a downed line
due to a tree branch in a storm, and twice to switch out their
ill-functioning equipment.

153. Re: Attn: All Amateur Radio Op's

Newsgroup: rec.radio.cb
Date: 2002-07-02 19:27:10 UTC
From: twistedhed@webtv.net
Message-ID: <6123-3D21FE8E-187@storefull-2311.public.lawson.webtv.net>
Source record: 129182

From: joxendi@bellsouth.net (Jerry Oxendine)
Dave,
>Forgive the top post (you already know what you said), but I have already stopped
trying to help, for the most part, because it seems to start "fires".<

Um, Jerry..... so does referring to cbers who enjoy DX as "wannabe hams". (Told you I read the thread in that group). You don't think that comment is inflammatory? Amazing some of you hammies fail to see your own derogatory comments directed toward cbers.

>someone asks
the dreaded "coax length" question, and I answer with the true dope that coax length
doesn't matter except when placing antennas in phase, it starts a long discussion of
VF and counter-claims ad infinitum. So I generally keep quiet these days except for
the most innocuous questions. I do find it hard not to respond to the "freeband" questions, particularly where it concerns illegal operations in the ham bands.
73
Jerry<

And that's a damn shame, Jerry, as you have much knowledge to share concerning non-hammies. But you ain't no dummy, and you can more than likely see that most of the freeband questions are shill ringers in order to start trouble,,follow that trail.

Sure, wavelengths exist, but your cb antenna will perform better the higher it is. Sure 36 feet may mean something technically, but again, for all practical cb real-world purposes, 60 feet has a huge advantage over 36. The higher the better..go as high as you feel comfortable with.

How much are we getting for the shirts? I am getting a booth at Timonium Ham fest and will be selling them there.
If all goes well they will be offered at the rest of the hamfests this season.

Just so you know, HTML postings are not welcome on UseNet groups not specifically designated for such things, such as "binaries" groups.

One last bit of advice... None of the rest of us can see your background or the two pictures in your signature... Only you can, as you have the proper "cookie" from Tripod. All I see are blank boxes where the images should be... I can barely read the text, either. Pink text on a light grey background just don't cut the mustard...

PH

I don't know if this will help but it could be skip. Does it seem to go away when the sun is down? If it does then it could very likely be skip. When you get 100s of CBers on the radio at the same time it will be just like you described and fade away as you go further away from the regular 40 ch but remain prevalent up to 28 MHz. I can remember back in the late 70s I couldn't squelch out the skip or talk to the end of the block even on ssb. Back then we also had to contend with the Russian Woodpecker, (over the horizon radar from Russia) and that would bring up a lot of questions. Some people thought that it was a form of radio tracking used by the FCC or DOC. Get a good tunable short-wave receiver and see if you can pick it up. Then tune to see if their is a center frequency or if it is the same across all 40. then look at the drop at the front and back i.e.. 26.000 MHz and 28 MHz. If it drops sharply below Ch-01 or above Ch-40, (26.9650 MHz or above 27.4050 MHz) then it is just skip. If you can find a center frequency then it is just as easy to track as tracking an other CBer. You may want to look at some of the things in your house like your computer, (bad generators of RF on 11 meters) Florescent lights and even radio scanners will do it. Even a bad power supply to your radio can generate it. Try shutting all of the electrical things down in your house 1 by 1 and see if it stops. The troublesome ones are things like house alarm and motion detectors that have no on or off switch. I hope that I was some help. It has been a while since I have had to track non-human noise on 11 meters.

Call the power company and file a complaint. They are required to either prove they are not the source, or if they are the source, to take all reasonable measures to remedy it. That being said, if it's been really dry where you are for a long time, it could be leaking insulators. In that case, all you can hope for is a hard rain.

Have you noticed the noise on your TV as well? Especially on channels 2-6?

BTW, the reason the noise gets lower when you get higher or lower in frequency, is because you are getting further away from where your antenna is resonant.

There is a noise problem with operating at 13.56MHz because that's the
freq on which a lot of plasma generators operate. Noise is very heavy
near industrial areas, and many times near universitiy campuses. But
if you can cut through the QRM it's a pretty decent freq for Part 15
operation.

I'm the newsgroup moderator? When was I bestowed such an honor? Whish I would have known sooner, half the dumb-asses on here would have been booted by now...

I was merely informing a WebTV user that such postings are generally not welcomed, before he finds out the hard way, through some other person who is not quite so nice about it.

Keep your unwanted, and little needed, comments to yourself... Thanks!

PH

One thing I have noticed in this group is that many people say that they are Hams and post call signs but the call signs are not in the data-base or the call and the names don't match or even the ISP in the header and the address in the data-base aren't in the same state or province. The are just Ham wana-bees that are either out to start fights or think that people will take them seriously if they say they are hams. This goes on on CB all the time. I have heard people bragging on 11 meters about being hams and when I ask them to meet me on 2 meters or 20 meters the excuses start to pore out. My 2 meter rig is broken or my antenna is down. They can keep a CB running but not a 2 meter hand-held??? Next time someone is beating you with a night-stick don't assume it was the police just because it looked like a police night-stick.

>73 from Rochester, NY
>Jim

You are right, tubes are not necessarily simpler. For a basic superhet
design all you need is the local oscillator, the mixer, and the
detector. That's just two transistors and a diode. You might want to
add an IF amp for better sensitivity, and an AF amp to use a speaker
(or just send the output to your stereo). And it's just as simple with
tubes. The difference is in the construction. It's not very easy to
plug together a tube radio on a proto-board. You also need both HV and
filament power supplies. And because of the high impedance with tubes,
you need really good grounding, plus you need to watch the wiring to
prevent feedback paths that could cause oscillation.

I think the expression of desire to not get a license stems from the crap that goes on in here. I know that for time being, I have little to no desire to get a license. Why would I? I have no desire to associate myself with the idiots that troll around in this group. Granted, from what I hear and read, most hams are not like this, but I find it hard to believe as I see little to no "decent" hams adding anything to this group. All I see are a bunch of power hungry idiots thinking that before they have the license, they are now GOD, and do whatever they please. They belittle and harass the hell out of that don't have a license. Why would anybody want to associate themselves with such asses? I know I don't want to...

We understood what you meant, PH. You were saying that anyone who
opposes illegal operators is actually a ham that hates CBers, and that
if they can have an attitude then so can you. Nice justification,
except for two very important points: Not everyone that opposes
illegal operation is a ham, and not all hams hate CBers.

Here's my 2 cents on the subject. I'm a licensed ham, but spend more
time on 11 meters. When I'm at work I spend a lot of time on 70cm and
220. When I'm home at night, I spend most of the time on 11 meters. As
for illegal operators, I have no problem with people running ham gear
on 11 meters, as long as they don't get carried away. I admit my radio
at home is a 2980 base. Yes it has 100's of channels, and yes it puts
out a whopping 10 watts AM, 25 watts SSB. With my A99 on the roof I
have no problem talking 30+ miles on AM, and I can talk skip all over
the world on SSB when conditions are good. I have no desire to use an
amp, or run a radio like the 2990 that has a lot more power. There are
a few idiots that talk on adjacent channels that I use, that are
running 100's of watts with dirty radios, splattering all the
channels. Those are the assholes that I hate.

.....And to the "anti" trolls, don't bother replying. I have most of
you filtered out anyway.

How do you feel about unlicensed operators on 10 meters or any other
ham band "as long as they don't get carried away"?

If your radio you use is... well, just 'slightly' illegal, why not
just run legally?

>.....And to the "anti" trolls, don't bother replying. I have most of

No, they should not be on any Amateur Band. I meant by "carried
away", running power.

>> I admit my radio
>>at home is a 2980 base. Yes it has 100's of channels, and yes it puts
>>out a whopping 10 watts AM, 25 watts SSB. With my A99 on the roof I

Because every 11 meter CB base I've owned was junk. The only exception
was the "Washington", which was good, not great. Now some people will
say that 2980/Saturn is junk, but at least the one I own works and
sounds great.

I don't remember mentioning Hallelujah Diet in this newsgroup.

Yes, my wife used to use the Barley Green Supplement until we learned a bit more about what that company sells. It was suggested by one of her friends. So what. There is a BIG difference between taking a Barley Green Supplement that hacres sells and subscribing to the diet. I see that you must have done a search with my name in order to dig up some dirt or something. Go back to your sandbox, keep digging.

Hey Keith. Nope, wasn't really putting it out to anyone in
particular,,,just talking to hear myself talk...in retrospect I guess it
came from the poster asking about wavelengths. If someone picks up on
it, great, if not, that's great too. They'll fare better at a higher
altitude for their antenna.

This is hammie voodoo, for all practical purposes. The higher the antenna the better.

BUT.....he was asking in relation to CB, which is 11 meter. The higher the better, for all practical cb related purposes.

I can see you are seriously trying to get yourself filtered... For your information, or lack there of, I DO NOT own any form of amplification device that pertains to RF communication. The only amplifiers I own are those which power the speakers in my car and my home. As I stated in a previous post to you...

"...your comments [are] unwanted, and little needed, and... ...you really should keep such stupidity to yourself. If you want to make yourself look like an idiot, by all means, be my guest..."

Hi Sean,

I'd love to see a pic of this new Galaxy. Can you supply a link or e-mail me a pic?

>As to the problem with frequency drift, this uses the newer 6900 board.

Not to bust chops, but I have the 148FGTL DX+ and it too is based on the newer (non-SMT) 6900 board and it drifts a tad while warming up to. My first Galaxy was a 3600-based Galaxy 2100 and to tell you the truth, the receive on it was so good, I didn't mind the little bit of drift a bit.

>A speech processor does nothing but raise the average level of audio
>and clip off the peaks.

Set correctly, it can mean being the one heard in a pile-up or even "closing the band."

>In my opinion, the
>generic speech processors that i've seen installed in more than a few radios
>are one of the most over-rated products on the market.

I'll take a SP-1a over an echo device any day of the week.

>Just ask Cobra how
>well their "speech processor" aka "Soundtracker" worked for them.

Cobra's 'Soundtracker' is not a speech processor, it's a compandor and requires the receiving station to be likewise equipped. I'm no fan of it either.

>The fact
>that they have pulled this "feature" out of most of their radios should tell
>you something.

Yep, it sucked. <ggg> Take it easy, Sean.

Getting pretty bad when you have to twist around my words and put them in a context they weren't intended to be in... Sorry pal, but you have some real growing up to do...

And for your information, or lack there of once again, the handle was given to me by the locals, and came from the fact that at one time I lived on top of a large hill, and basically had "power" over the area, as I was the one and only person able to relay messages back and forth to those that could not make the contact to the person they desired to speak to. The area is VERY saturated with iron ore, and rather hilly, thus making communication more difficult...

Been a while since I have been called GOD. I do pretty much what I please tho. Like the proverbial rabbit who was asked why he slept in a refrigerator, "This is a Westinghouse and I am Westing" call it rec.radio and I will recreate to my heart's content.

Seriously tho, I am more or less the senior ham on this group, Bert is a new Extra, Jerry Oxendine is, Jim is and we all make no pretense of much of anything and put out the call signs for all to see; Wysiwyg. Doc and a few others choose not to be so accomodating but they are pretty calm grandpa types like the rest of us. So I kind of wonder who you are

talking about.
Yes there is George but he is simply insane and blocking giganews does him in. Dr. Strangelove is the current manifestation or infestation as you like.

Aaron denies a ticket, Sparky denies a ticket and they seem to be the local branch of Legal, Eagle, Beagle, and Briefcase. There are a few Lifer Techs floating around trying for respect and not getting it. There are any number of Temp Techs (e.g. Jay in the Mojave) who are reasonable. Just whom might you have a problem with?

I will admit to being a little tough on CB Mythology wherever I see it. But in general I believe ignorance to be curable where stupidity is for life so I try to educate the ignorant where I can and killfile the stupid. But I don't often use the hobnail boots and the rest of the guys are far nicer than I am.

Sure, wavelengths exist, but your cb antenna will perform better the
higher it is. Sure 36 feet may mean something technically, but again,
for all practical cb real-world purposes, 60 feet has a huge advantage
over 36. The higher the better..go as high as you feel comfortable with.

>heh hiya twist, were you responding to me or Donnie? I couldn't tell
for sure, this news server sometimes messes up and mixes threads around.

Hey Keith. Nope, wasn't really putting it out to anyone in
particular,,,just talking to hear myself talk...in retrospect I guess it
came from the poster asking about wavelengths. If someone picks up on
it, great, if not, that's great too. They'll fare better at a higher
altitude for their antenna.

Twist there comes a point of diminishing returns, the loss from extra coax
to go higher may not be made up with additional height.

Dick this is not a flame but using your call on this NG is like using it on CB. It is out of place. I have no problem with you but the use of ham calls seems to be what is causing the trouble.

> Dick N�BK
>
Maybe we should all post with our Handles on this NG and leave the HAM calls to the ham NGs. It's like using 10-4 good buddy on 2 meters. You would get shunned and laughed off the radio.

Twisty, do Hams Operate with a different set of Electron Magnetic Laws than
Cbers?
Normally height is might, it depends on what you are trying to do,

> Muncie,IN

All radio frequencies have wavelength. The two are inversely
proportional, the higher the frequency the shorter the wavelength.
As far as placing an antenna a certain wavelength above ground,
well, there is ground and then there is ground (RF ground vs
ground ground) and the two are seldom the same. RF ground may lay
well below the surface of ground ground, it depends upon the soil
type. Some soils are good for RF ground and for some other soil
types RF ground doesn't exist. So trying to get an antenna a
certain height above RF ground may be difficult. Just to get the
antenna at least a wavelength above ground ground and don't worry
where RF ground may be.

Right George, but if you mount the X-Force on the tower and turn the preamp
on, you can lick that problem! LOL

Not hammie voodoo, suggest you get a copy of "The Radio Amateur's
Handbook" and do a little reading on antenna theory, you just
might learn something.

223. Figured out noise on my CB..Computer monitor..Help

Doubtful, buttplug. I'm running a 19" Dell monitor with a GeForce 2ti 64 meg vid card. Nothing looks funny but you. If you really are using that cheesy 10" monitor in the pic, maybe you should consider upgrading so that you can see what the rest of the world does.

What exactly is "junk"? I own many CB radios, and have owned many,
many more. I never did care much for the Washington/TRC-490: lots of
problems, fussy tuning, not a very sturdy package, and the sound was
terrible even with an external speaker. OTOH, I have a Kraco that has
been beat to hell and back, and it still works like new. I have a
Johnson Messenger 223 (tube rig) that has the best sensitivity of all
of my radios, and a Hallicrafter's CB-3A that comes darn close. I have
a SBE Trinidad III and a P/S Bengal that are both workhorses. The two
Super Lynx's are pretty good radios, too. I also have a few Radio
Shaft models, some better and some worse, but as long as some idiot
hasn't "modified" it with a saber-saw and an arc-welder, they usually
do the job for which they were intended. I guess that's true for all
CB radios, though.

OTOH, I have a few of these so-called "good" radios: The GE Superbase
is junk (poor quality components), the Tram has audio/AGC issues, the
Ranger has major drift problems, and the RCI has such a cheap PCB that
it is actually warped. These are radios I keep on the shelf as
conversation pieces, because they aren't good for anything else.

So maybe I don't know how you define "junk". Care to elaborate?

>>>.....And to the "anti" trolls, don't bother replying. I have most of

Where did I say that you owned an amp? I didn't. I am fully aware
about your love-it-to-death Cobra and other radios with the power and
frequency mods. You may not run an external amp, but by your own
admission you exceed the power limitations.

BTW, do you run anything legal? Just curious...

Good thing you had those power mods done on those Cobras, huh? Or did
you still have that 250 watt amp that you used with your dad's radio?

>---REMOVE PROMARS FROM MY E-MAIL ADDRESS TO E-MAIL ME

What you are hearing is a high harmonic of the horizontal sweep
circuit, and possibly some noise added from the switching power
supply. CRT-type computer monitors are notorious for their lack of RFI
shielding. This problem cannot be fixed unless you fully encase your
monitor inside a metal box.

There are three things you can do:

1. Change the refresh rate on your monitor. This will change where the
band of harmonics lands, so that could be either good or bad. But you
won't know until you try.

2. Turn the monitor off.

3. Get one of those LCD flat-panel displays, or maybe a nice laptop to
use while the CB is on. They might also make some noise, but not
nearly as much.

But that's the false logic of that position. When you get a ham license, you aren't accepting some ego-crazed maniacs as your permanent roommates, you are earning yourself a ticket to associate with whomever you want to, on any of the bands that you have privileges for. If stuffed shirts turn you off, seek out other people on other bands. When you're DXing internationally, there isn't much difference in the contact other than procedural or style.

Ham radio is what YOU make it. For someone, who is truly a radio enthusiest, to use the excuse that they don't like some of the people in ham radio, as a reason for not pursuing a ham license, that, to me, is just a cop out.

When I went for my license 20 years ago, I wasn't too thrilled with the stuffed shirts (And they were worse then), but enough of my friends also bit the bullet and took the test, and we started our own group. We didn't need the approval or acceptance of the stuffed shirts. We did our own thing. That's the beauty of ham radio. Plenty of room for everybody.

> running 100's of watts with dirty radios, splattering all the
> channels. Those are the assholes that I hate.

Be careful what you preach here, because you could unwittingly be part
of the same group. A Galaxy 2980, combined with an A99 antenna, has been
the cause of more than enough TVI/RFI problems over the years. The radio
is not particularly clean spectrally, and the decoupling issues with the
A99, allow it to radiate RF into nearby homes with greater strength than
other antenna types. I would be surprized if none of your neighbors have
a problem with your operating habits. Maybe you don't bother them enough
to mention it yet.

I'm not going to take the "holy high road" and demand that you only run part 95 accepted equipment. But if you do decide to run something other than that, you need to be keenly aware of the interference potential that non-type accepted radios can produce. To that end, it is helpful to have test equipment and understand enough about radio theory, so that you can do the responsible thing and be as clean as possible, even if you don't obey the letter of the law.

>
> So maybe I don't know how you define "junk". Care to elaborate?

Wow! Looks like you've gone though your share of radios over the years.

As to your question of what constitutes junk? Well, the answer to that
is complicated. Many people just repeat the heresay that they've been
told by other people (Like don't buy Radio Shack, they're junk,
meanwhile RS used the same Uniden boards as Cobra, president and
others). Many radios are called "junk" simply due to misperception. Is a
TRC-490 junk, while a Cobra 142 GTL not? Same radio, different badges.

Then there are radios that are "junk" by virtue of the fact that they just don't work right. But then you have to ask, has this radio been hacked by a screwdriver tech? Is this radio junk by design, or through improper alignment or modifications?

I guess any radio that does not perform to your expectations is "junk". Maybe some people have higher expectations then others. Which is why one person can be perfectly happy with a 30 year old Lafayette, while another buys and sells new radios every other month claiming that "they're all junk!".

YMMV

But one of the valid points that have been raised by some of the CBers, is that posting a ham call, is sometimes viewed as "flaunting" the ticket. I have mine in my e-mail header, but I don't post it for just that reason. If the topic of discussion heads in that direction, I will state the truth. Unless there's a specific reason to mention a ham license, I usually try not to, as it is not usually relevant to the topics that are discussed here.

Agreed. In today's society, it's about 10% substance and 90% flash.
People are more concerned with how things appear to be, then what they
really are. There are many people on here that try to read things into
the infomation that is presented, that in most cases, is just not there.
They twist meanings, take statements out of context, and try to make an
issue out of nothing. In short, paranoia

I've said before that I'm not good at mollycoddling. I present what I
know, and like to exchange experiences with other intelligent people,
and hopefully come away with more knowledge than before. But if I tell
someone, for example, that clipping a modulation limiter is not such a
good idea, and explain the reasons why, I am not responsible for someone
else interpreting that as "another ham spouting off his superior
attitude".

> There are a few exceptions to this rule, one of them being Bill Nelson.

It's a difficult path to take, to walk that fine line and not be looked
at as hypocritical. If you offer up only information and resist the
temptation to get into the politics, you stand a chance. Otherwise, once
you take a stand on an issue (I.E. illegal operation vs. legal) you are
more or less bound by your position, and you stand to lose credibility
or character if you offer up information that differs from your stand.
Just like there is no such thing as being "a little pregnant", there is
no such thing as being "slightly illegal". So if you take a stand that
amps are wrong because they are illegal, you can't very well tell
someone else how to mod a radio for extra channels, since that is also

illegal. On the other hand, if you have no real problem with small amps
and a few radio "enhancements", then you have no room to complain that
another user is running thousands of watts and splattering the band, and
cite regulations to back up your complaint.

The whole issue of illegal operation has gotten completely out of hand.
Once upon a time, if someone wanted a little more power or a few more
"getaway" channels, it was no big deal. No one got hurt, and no one was
denied access or kept from enjoying their hobby. But like most things,
when a little extra is good, a lot more must be better, and things have
reached the point of critical mass in some cases.
Since you can't legislate morality, and it comes down to a matter of
opinion as to whether certain illegal operation is rude or inconsiderate
to other users, the only recourse that many have had, has been to fall
back on the rules and regs. Now there can be no question that what is
happening is against the law (Although there are still those that try to
argue that since it's not on the same level as murder, it's no big
deal). The hope is that some fear of enforcement will throw a little
water on the fire and settle things down a bit. This isn't hams bashing
CBers. It's CBers fighting to save some dignity for their hobby. The
fact that many of these same CBers are also hams is totally irrelevant.
One CAN love both services (Although not all of the people on them).
This has forced many of us to pick a side. I am not totally comfortable
siding with the letter of the law, since most of my CBing in the past,
involved some form of illegal equipment. But like I said before, it has
gotten out of hand, and something needs to be done.

I'm not a "letter of the law" kind of guy, but something has to be done
if this service is to retain any credibility, and any hopes for future
expansion as a hobby service. As long as the perception by lawmakers, is
that the CB service is overrun by outlaws, there will be no serious
considerations toward added bandwidth or increased priviledges. I, for
one, would love to see 11 meters opened up from 26.0 to 27.995, with
rigs up to 100 watts PEP (25 watts AM carrier) and FM. There have been
others proposing similar. But it'll never happen as long as there are
people who openly and blatently defy the law.

>
> Maybe if there were a few more hams like Bill on this group and less of the
> condescending and negative assholes (that is what they come across as)
> that tend to dominate most of the threads and represent the amateur
> community in a poor fashion, we might make some progress around here.

Not as long as any attempt to offer up legal alternatives is read as
"hams bashing CBers", even when the people citing the rules may not even
be hams.

> After all, who likes getting slapped in the face, kneed in the groin and told that
> they are doing something wrong.

No one, but my parents did similar things to me when I was growing up,
and did things wrong. Punishment is what makes someone think in

retrospect about what it was they did wrong. As long as the people here believe that they are not doing anything wrong, there can be no progress.

It's also tough trying to make a point when there are certain mentally challenged people on here that obfuscate, distort, and take each and every sentence out of context. It's no wonder many of us loose our cool from time to time.

> I think that most people would prefer being
> told that there is a better way and have someone that will demonstrate the
> superiority of a slightly different approach.

It's the same thing. As long as they're convinced that their's is the best way, their minds are closed to new ideas (or old ones that work better). It's way too easy to dismiss something out of hand as "CBer bashing" than to consider the merits and have the intellectual honesty to admit that you MIGHT be wrong.

> Since not everyone has the
> same level of understanding nor do we all learn at the same pace, it might
> take some longer than others to fully understand where we are going.

I am patient with people who are willing to learn, but just haven't grasped the concepts. I will explain it as many times and ways as it takes to get the point across. But if people have already made their minds up that you're blowing smoke, no amount of explaining will convince them.

Power Mods on Cobras?? Have no idea what you are referring to there... Is
there a point in turning the power up from 4-watts to 5 or 6-watts?
Wouldn't make a bit of difference... Incidentally, the radio I used was a
Midland 40-channel SSB base from the mid to the late 70's. Didn't even own
a Cobra at the time, so I have no idea where you got that crap from...

250 watt amp huh? Doing a little history checking are you? In the only
posting I every made in reference to that, I said it was "at my disposal

when needed" Never said I actually used it. Being up on the hill, it was not needed, but it was there just the same; I won't deny that.

Sorry, I probably should have clarified a little better on that.

I don't have the time to go around and verify if a person has a ticket or not, or whether their claims at actually having one are valid or not. If they indicate in some way or another that they have one, then I just look at them as being a Ham operator, whether they actually are or not. I know that it's not quite right of me to do so, but some of us just don't have time to waist validating a persons claims of such.

I make great use of my killfile, and as you can see, I am replying to your post. Basically that means I haven't found you to be an incompetent idiot, so I really wouldn't worry about that too much. If I must back my claims, I'll drop you a copy of my killfile, and you can pick up the pieces from there if you like. It would be those in my file that I am referring to...

That actually would be helpful for me as well. My monitor interferes with my scanner, though not as bad as this damn, RF Hash creating, Linksys router! My god what an awful broadband noise that thing emits. Personally, my TV is what interferes with my CB. I'm sure the solution would be similar if not the same as for a monitor... Anyone?

I know most of my neighbors, and nobody has complained in the 3 years
my A99 has been up. Considering my roof is an antenna farm with 4
antennas (A99, 2 discones, & dual-band), they'd know where to come if
I was a problem. I have asked my closest neighbors if they ever heard
me, and they said no.

Yeah, being the inept little webmaster that he is, he told me to fix my monitor, and then quietly, he ran back behind the scenes and screwed with the dimensions.

You know, IF that were truly his family, I'm sure he'd have some newer pics by now. That one is rather dated. I guess he didn't plan on his little charade lasting this long when he originally set up the fictitious page.

BTW, if you look VERY closely at the pic with the computer desktop, you can see the letters "FCC" rather crudely added to the monitor. What a wannabe! LOL!

Dave Hall wroted:
>But that's the false logic of that position. When you get a ham license, you aren't accepting some ego-crazed maniacs as your permanent roommates, you are earning yourself a ticket to associate with whomever you want to, on any of the bands that you have privileges for.<

When one attains a hammie ticket and is disillusioned (oh, you better believe it happens..just look at the perma-nocodes for proof) one usually returns to their roots,,angry, and caught in a limbo where they neither want to be nor are wanted by either faction. Facts is what the facts is.

> If stuffed shirts turn you off, seek out other people on other bands.<

I don't hear many stuffed shirts on hammie radio. Boring, yea, stuffed shirts, no.

> When you're DXing internationally, there isn't much difference in the contact other than procedural or style.
Ham radio is what YOU make it. For someone, who is truly a radio enthusiest, to use the excuse that they don't like some of the people in ham radio, as a reason for not pursuing a ham license, that, to me, is just a cop out.<

So far Hall, you have allowed that ANY reason a dxing cber gives for not getting a ticket is a cop-out. The problem is on your end. Maybe a another hammie could assist on your dilemma. Sounds likie ya' a need a refresher elmer.

>When I went for my license 20 years ago, <

Here we go...war stories by our resident paranoid hammie who admittedly has deficits in dealing with change of any type, begins to reminisce about :"the olden days" and "the way it WAS".

>I wasn't too thrilled with the stuffed shirts (And they were worse then),<

And the snow, of course, was much, much deeper than it is today.

> but enough of my friends also bit the bullet and took the test, and we started our own group. We didn't need the approval or acceptance of the stuffed shirts. We did our own thing. That's the beauty of ham radio. Plenty of room for everybody.

>Be careful what you preach here, because you could unwittingly be part of the same group. <<

You mean he's not? What happened to your theory that "laws are there to protect all, you either obey them or are a criminal"?

>A Galaxy 2980, combined with an A99 antenna, has been the cause of more than enough TVI/RFI problems over the years. The radio is not particularly clean spectrally, and the decoupling issues with the A99, allow it to radiate RF into nearby homes with greater strength than other antenna types. I would be surprized if none of your neighbors have a problem with your operating habits. Maybe you don't bother them enough to mention it yet.
I'm not going to take the "holy high road" and demand that you only run part 95 accepted equipment. But if you do decide to run something other than that, you need to be keenly aware of the interference potential that non-type accepted radios can produce. To that end, it is helpful to have test equipment and understand enough about radio theory, so that you can do the responsible thing and be as clean as possible, even if you don't obey the letter of the law.
Dave
"Sandbagger" <

In any event, I am jubilant to see you have been educated in the matter and can now comprehend not all radio rule breakers are "criminals" as you have in the past tried to put forth. Congratulations. You have a long, hard road ahead of you, but I commend you for your first step.

Ummm .... Jim is ... uh, what? New extra? First extra as WB2OSP in 1966, WA3RJX in around 1971, N2JH later in the 70s ... first call WN2CJV in 1962 (although I know you have me beat on that by a few years). Heck, with this order your own callsign, one can't even tell where someone else is (roughly) without either being told or looking it up on qrz.com. We've got a couple of local ops here in Rochester, NY with eighth district callsigns.

73 from Rochester, NY
Jim
ps - 1st phone in 66 as well as the telegraph and radar endorsement. Means about as much as Moose Cud .. er .. Moss Code these days! ;)

Source record: 129295

Dave Hall wroted:
>It's a difficult path to take, to walk that fine line and not be looked at as hypocritical. <

It sure is. Ever wonder why? Get some of the enlightened hammies who aren't looked upon in that matter to clue you in. I do believe you may be on a roll to recovery, Hall.You obviously recognized your err in calling everyone who doesn't adhere to every rule "a criminal", as you have ceased that behavior. Recognizing the way you are looked upon by the cb masses is another step. As I said, an enlightened hammie can assist you, all you need do is reach out and ask for their assistance, if your pride and ego will allow it.

>If you offer up only information and resist the temptation to get into the politics, you stand a chance. Otherwise, once you take a stand on an issue (I.E. illegal operation vs. legal) you are more or less bound by your position, and you stand to lose credibility or character if you offer up information that differs from your stand. <

Your predicament is becoming more clear, now that you have shared the amusing manner in which you view. Hint: The majority doesn't think this way, only the minority interested in further dividing the 2 services.

>Just like there is no such thing as being "a little pregnant", there is no such thing as being "slightly illegal".<

Where is Sparky, the non-sequitur cop, when he is needed?

> So if you take a stand that amps are wrong because they are illegal, you can't very well tell someone else how to mod a radio for extra channels, since that is also illegal. <

20 years a hammie and you are still slinging big bullshit. It is NOT illegal in any way shape or form to mod a radio for extra channels nor to exchange said information.

>On the other hand, if you have no real problem with small amps and a few radio "enhancements", then you have no room to complain that another user is running thousands of watts and splattering the band, and cite regulations to back up your complaint.<

WTF does THAT last line mean?

>The whole issue of illegal operation has gotten completely out of hand. Once upon a time, if someone wanted a little more power or a few more "getaway" channels, it was no big deal. No one got hurt, and no one was denied access or kept from enjoying their hobby. But like most things,

when a little extra is good, a lot more must be better, and things have reached the point of critical mass in some cases. <

So this is how you were misinformed and fell astray into believing that everything must be categorized, pigeonholed, labeled, and such.

>Since you can't legislate morality, <

And you were doing so well.......

>and it comes down to a matter of opinion as to whether certain illegal operation is rude or inconsiderate to other users, the only recourse that many have had, has been to fall back on the rules and regs. <

And therein illustrates your mindset. You continue to place mortar and sling bricks and add to the wall of separation between cb and hammies with comments such as "recourse (read: vengeance)" and talk of cbers who do not attain a ticket as being "lazy" . Not all suffer from your affliction of not being able to see the forest through the trees.

>Now there can be no question that what is happening is against the law (Although there are still those that try to argue that since it's not on the same level as murder, it's no big deal). <

Paging the non-sequitur cop.......

>The hope is that some fear of enforcement will throw a little water on the fire and settle things d own a bit.<

Exactly! This is what Muenzler tried and failed with, but thanks for the admittance to what was obvous to most.

> This isn't hams bashing CBers.<

You're right. Try as those few may, they just can't get a grip on competency.

> It's CBers fighting to save some dignity for their hobby. <

Funny, you don't see many cbers in here fighting at all, unless, of course, it's with a discontent hammie who can't control his anger and emotions resulting in his insults.

>The fact that many of these same CBers are also hams is totally irrelevant. <

If you really believed that you wouldn't make so much noise about not being able to comprehend why cbers don't become hammies. You really ought to think before you post.

>One CAN love both services (Although not all of the people on them). This has forced many of us to pick a side.<

Note yourf word selection...."forced"..as in not having control in the matter.

> I am not totally comfortable siding with the letter of the law, since most of my CBing in the past, involved some form of illegal equipment. <

And of course, you weren't a "criminal" when you had your fill, but now that anyone else does what you did, they are criminals.

>But like I said before, it has gotten out of hand, and something needs to be done.
I'm not a "letter of the law" kind of guy, <

Riiiiiiight! All those you referred to as criminals for not obeying all laws and all ordinances and all rules all the time,..you were FORCED to do so.

>but something has to be done if this service is to retain any credibility, and any hopes for future expansion as a hobby service. <

Nether service is expanding, and hammie radio is in constant danger of losing more spectrum every day.

>As long as the perception by lawmakers, is that the CB service is overrun by outlaws, there will be no serious considerations toward added bandwidth or increased priviledges. <

That's not the perceptions by lawmakers. MOST lawmakers don't even know cb still exists. Those that do consider it a non-issue, with the exception of those who throw bones to wealthy constituents, sorta like the observer program that you mad hammies consider a gleaming endorsement/second coming by the feds.

>I, for one, would love to see 11 meters opened up from 26.0 to 27.995, with rigs up to 100 watts PEP (25 watts AM carrier) and FM. There have been others proposing similar. But it'll never happen as long as there are people who openly and blatently defy the law.<

You mean like how the entire country disobeyed the 55 mph law until it was (ahem) disregarded.

>>Maybe if there were a few more hams like Bill on this group and less of the condescending and negative assholes (that is what they come across as) that tend to dominate most of the threads and represent the amateur community in a poor fashion, we might make some progress around here. <<

>Not as long as any attempt to offer up legal alternatives is read as "hams bashing CBers", <

It's not ANY attempts that is read like that, only the ones that were intended as such.

>even when the people citing the rules may not even be hams. <

They are. Your insinuation is an extension of the main problem and superbly indicative of yours.

>>After all, who likes getting slapped in the face, kneed in the groin and told that they are doing something wrong. <<

>No one, but my parents did similar things to me when I was growing up, and did things wrong. <

Then that is another issue you should work on. Abuse is no laughing matter.
This revelation casts a new light on your bizarre behavior. It is never too late to deal with past issues.

>Punishment is what makes someone think in retrospect about what it was they did wrong. As long as the people here believe that they are not doing anything wrong, there can be no progress. <

As long as victims such as yourself continue to justify what happened to them by thinking you somehow deserved it as "punishment" because you were being corrected, you can never begin to heal or recover.

>It's also tough trying to make a point when there are certain mentally challenged people on here that obfuscate, distort, and take each and every sentence out of context. It's no wonder many of us loose our cool from time to time. <

"MANY" don't lose their cool..only hotheads that have no self-control over their actions and emotions, and those who respond poorly with no obvious thought. As I said..ironic that certain hammies are hammies when effective communication appears to be the least adept skill demonstrated.

>> I think that most people would prefer being told that there is a better way and have someone that will demonstrate the superiority of a slightly different approach. <<

> It's the same thing. As long as they're convinced that their's is the best way, their minds are closed to new ideas (or old ones that work better). <

Such as "the way it USED to be?"

>It's way too easy to dismiss something out of hand as "CBer bashing" than to consider the merits and have the intellectual honesty to admit that you MIGHT be wrong. <

(chuckle) Walk the talk.

>>   Since not everyone has the
same level of understanding nor do we all learn at the same pace, it might take some longer than others to fully understand where we are going. <<

>I am patient with people who are willing to learn, but just haven't grasped the concepts. <

As defined by you, no less.

>I will explain it as many times and ways as it takes to get the point across. <

You not grasping why cbers don't all get tickets has no point.

>But if people have already made their minds up that you're blowing smoke, no amount of explaining will convince them.
Dave
"Sandbagger"<

The best way to avoid this is to avoid "blowing smoke". Try it, you too can earn the respect you think you are automatically entitled to by virtue of your ticket, if you emulate the majority of hammies that are enlightened among us.

Great! One thing I noticed once I got a fast 'puter is that it was putting a LOT of noise in my rf output on my cable tv. The thing doesn't bother the 36 incher as I'm using baseband audio and svideo; rather, it is clobbering the kitchen tv and the upstairs tv which are connected to the rf output on channel 3. I bought a filtered outlet (not surge suppression, that is another one in front) from Rat Shack (only 15 dB isolation - I would have preferred 30) and it really cut down the noise. Both my monitor and computer are plugged into the thing. It certainly won't help stuff that is directly radiated, but if it is conducted back to the 110, the isolation will cut down interference quite a bit.

>>True enough. And if you remember, that's what this forum was like a few years back.<<

Yea, agreed. When Dogie YOUR ABSOLUTE SUPERIOR AND OWNER YOU FAG. came in and was denied any respect for his NO ONE NEEDS RESPECT FROM SLIME LIKE YOU FAGGOT BOY! trashy, potty mouth a few years ago, ANTI BOYS OWN THE NG!!!!!!!!!!he went berserk, and the AKC was formed, with you being part of it Dave, or did you forget your aligment with them? Say the word and I'll referesh your memory.

> Then the fights started whenever someone tried to correct "CB science" with good engineering practice.<

Dave, you are a regular piece of work...why not try injecting a little truth...AND WHILE HE IS AT IT PERHAPS INJECT SOME MANY COCK INTO YOUR CUM SUCKING FACE, HUH QUEERBOY?and while we are on the subject of truth, why do you feel the need to lie? No Dave, just cause your memory is a false one doesn't mean that most present don't remember Dogies YOUR ABSOLUTE SUPERIOR AND OWNER YOU FAG. entrance. HIS ENTRANCE WAS THE DEATH KNELL FOR THIS GROUP OF FAG ASSED FEDERAL CRIMINALS, HE LED THE CHARGE IN HIS HONESTY AND NOBILITY, AND CLAIMED OWNERSHIP OF YOU! HE STILL BUGS THE SHIT OUTTA YOU CUZ YOUR FAGGOT ASSED 1MANGAYBOY BULLSHIT HAD ALL THE ANTI'S LAUGHING SO HARD!!!! YOU SAID "chickenhawk", WE SAY "LICK OUR STALKS"

> Sooner or later, things degenerate into name calling, <

How about sooner, like immediately after any off the self-professed AKC's are disagreed with. Again, this was patented by Dogie YOUR ABSOLUTE SUPERIOR AND OWNER YOU FAG. and furthered by Frank. AND THE ANTI'S KICKED YOUR PATHETIC FAGGOT CUM SLURPIN ASS LIKE YOU WAS THE RED HEADED STEP CHILD!

>and then the stereotypes fly, and mutual disrespect is assured. <

Don't forget the lies, such as the bullsht you are attempting to sling now. YEAH WE WONT FAGGOTBOY!

>For some reason, the perception is that CBers don't like hams, <

For some reason? I never heard that. Some cbers don't like some hammies who ignorantly claim you either obey all laws or get labeled a criminal, such as yourself. YOU ARE A CRIMINAL FAGGOTBOY. MUST BE RELATED TO JOSEPH GOEBBELS

>mainly because in their efforts to educate, they are seen as "preaching" or condesending.<

Let's see, you called many names, beginning with "criminal"NOT A NAME YOU COCK MUNCHING SHIT HUNK, IT IS A FACT! to those who you have absolutely nothing to base that accusation on other than speech content. That makes you one of the "name-callers" you are hypocritically ranting on about. WAHHHH WAHHH MY NAME IS TWATHED AND THE BAAAAAD HAMMIES CALLED ME NAMES!!!! MOMMEEEEEE!!! PLEASE SAVE ME! CAN I GO BE 1MANGAYBOY AGAIN MOMMMEEEE? PWEEEEEZE??????

> Many CBers have openly stated that they don't feel that earning a ham ticket is an achievement worth any respect despite what other credentials the "ham" may also have. <

And "certain" hammies are obviously ego-bruised by this. NO SEMEN FACE, WE ARE FUCKING ENTERTAINED! THIS IS ABOUT HAVING A GOOD TIME AT YOUR EXPENSE YOU STUPID ASS CRIMINAL CUM SUCKING QUEER!!! BWAHAHAHAHAHAHAH LIFE IS SOOO GOOD WHEN YOU ARENT A STUPID ASS CRIMINAL CUM SUCKING QUEER!!!One isn't entitled to respect, Dave. One must earn it, and a license isn't any big achievment. For those that feel it is, congratulations,
but when you attempt to impress that "feeling" on others, you create problems for yourself them look around for someoen to blame...how convenient, you're in a CB ng, who shall you blame? BLAME?? NOPE!! TORMENT!!! POOR WIDDLE TWATHED...TAKING THE BRUNT OF THESE VICIOUS ATTACKS... AFTER ALL IT COULDNT BE BECAUSE YOU ARE A FAGGOTY STUPID ASS CRIMINAL CUM SUCKING QUEER!!! IT IS THE FAULT OF THE MEAN HAMMIES...."MOMMEE", TWATHED PATHETICALLY CRIES "I WANNA PLAY 1MANGAYBOY AGAIN" "THE MEAN HAMMIES ARE CRUSHING ME WITH THEIR SUPERIORITY."

>Many hams feel that CBers are reckless and lack respect for rules, whether operational or technical, and approach technical issues with a "damn the torpedos, full speed ahead" attitude rather than a more methodical, theoretical approach.<

Good thing most of us don't give a squat what "many" hammies feel. BUT YOU WILL GIVE A SQUAT FOR A MANLY DICK CRAMMED UP YOUR ASSHOLE, WE KNOW IT TO BE FACT!

>When you have these preconceived notions, it's hard to overcome them to achieve any meaningful dialogue.<

So tell us, why do you continue to perpetuate these "stereotypes" you speak of. YOU PERPETUATE THE STREOTYPE OF A FUCKING CRIMINAL AND A FAG ASSED COCK SLURPING HUNK OF DISEASED WORMY DOG SHIT!

>Once the facade of mutual back slapping becomes tired, and someone gets into a disagreement about how something should be handled, the old defenses pop up, and further constructive debate becomes useless.<

Well, why don't you do a statistical search and see where the names come from. Between George and Frank, they have that type behavior locked up at a ratio of like 7 to 1.
Drone on Dave, drone on.SUCK ON FAGGOT, SUCK ON. TRY NOT TO GAG. YOU ARE A FUCKING CRIMINAL AND A FAG ASSED COCK SLURPING HUNK OF DISEASED WORMY DOG SHIT!

>>As such, how many of you are willing to contribute to threads in a manner that may help cber's learn from and possibly even look up to the Amateur community ? If you want people to do what is "right", you have to help them to understand why the things that they are doing are "wrong". <<

>No one will understand what it is that they are doing wrong, if deep down inside, they don't believe that it's wrong in the first place.<

Such as you holding that anyone that doesn't see it "Your" way is not socially responsible? YES ASSHOLE YOU ARE A FUCKING CRIMINAL AND A FAG ASSED COCK SLURPING HUNK OF DISEASED WORMY DOG SHIT!
Such as we all have a duty to remain ethically
bound to morals the way YOU see fit? NOT FOR ASSHOLE FEDERAL CRIMINALS LIKE YOU WHO SUCK COCKS IN TRUCKSTOPS IT DOESN'T.
No, Dave, it doesn't work that way
at all.

Any attempt to correct that notion only >reinforces those earlier preconceptions. If someone feels that "god" gave them the right to operate as they please, or that they break selective federal laws as a form of civil disobedience, then it's going to be a hard battle to win that person over. <

You highlight my point perfectly, esconcing the fact that you see a battle,,a fight...something to be "won or lost" between cb and hammie radio..it is thinking like your own that does more to separate such hobbys. WHAT BATTLE? YOUR COCK LICKING ASS GETS WHIPPED DAILY! IT IS SO MUCH FUN TO WATCH YOU POST SHIT LIKE THIS! YOU FAGGOT ASSED DICK MUNCHING PIECE OF WORMY DOG SHIT!

>Then you have the guys who will religiously hold on to their "outlaw" beliefs and will do their best to undermine any attempt at credible education, sensing that success in properly educating people will threaten their own empires and will ultimately effect them both psychologically and financially, in some cases. <

I notice you intentionally left out any wrongdoing by any hammies.
THE ANTI'S ARE HERE TO STAY AND YOUR FAGGOT ASS CANT DO SHIT ABOUT IT. YOU SHOULD SHUT YOUR SEMEN CRAVING GOBUTET AND GO BACK TO THE TRUCKSTOP AND WORK! BETTER TAKE THAT KID WITH YA, LOOKS LIKE HE"S GETTIN THE AGE WHERE HE WILL SOON NEED A TRADE!
Why

is it so diffcult for people as yourself to present a balanced side of an argument and let the masses make up their own minds? I'll tell you why, the same reason you had to retreat to posting under a pseudonym, withholding your name...it's BS! YEAH? WELL ADMIT YOUR CRIMINALITY THEN YOU COCK MUNCHING FAGGOT ASSED JIZZ GOBBLING PIECE OF ROTTEN DOG SHIT! THAT WILL BE A GREAT BALANCER!

>There's a lot of money to be made by perpetuating "CB science", and education is the bane to that existance. <

To the point of hammies WHO ARE ALL SUPERIOR TO YOU! telling outright lies concerning enforcement in attempted order to intimidate cbers? SO WHAT? YOU ASSWIPES LIE TO YOURSELVES ALL THE TIME. ALSO, WHAT THE FUCK IS THE BIG DEAL ABOUT AN HONEST MAN LYING TO A CRIMINAL? Yea, we know the drll, YOU KNOW THE DRILL CUZ YOUR ASS HAS BEEN DRILLED!
Dave. Sorry, most cbers aren't intimidated as much as certain hammies, evidenced by our willingness to think outside the box OUTSIDE THE BOX! BWAHAHAHAH! "BOX" IS A WORD THAT MEANS PUSSY...TWATHED HAS BEEN "OUTSIDE THE BOX" ALL HIS FAGGOT CUM LICKING LIFE! and NOT conform to anothers picture of righteousness. LIKE IN THE CASE OF YOUR COCK SUCKING AT TRUCKSTOPS FOR MONEY, RIGHT TWATHED?

>Technical issues usually degrade down to a "I know more than you do" arguement, with each side attempting to boost their credibility by listing their accomplishments, or their college degrees etc.<

Again, you speak of Frank. WE OWN THE NG, SAY ANYTHING YA WANT!

> One only has to dig up an old thread about coax lengths to see this in action. <

Or any of a shitload of Frank's post claiming his technical certificate and/or education is somehow relevant. I agree, it has no place. ANYTHING AN ANTI BOY POSTS HAS 10 TIMES THE RELEVANCE OF A GAY ASS COCK SUCKING PIECE OF SHIT LIKE YOU, TWATHED I must say though, your prioritie seem to be clouded along with your judgement, Hall.
Why can you set forth your ticket as a condition of an accomplishment but you feel threatened when someone does it with their education? It seems to me that a college degree or certificate means way more than your ticket, but you never cease to surprise. Holding your ticket above education is no surprise. AND YOUR CRAVING FOR THROBBING DRIPPING DICKS IS NO SUPRISE EITHER, YOU HAVE BEEN A DICK SUCKING SPERM GOBBLING QUEER ALL YOUR MENTALLY RETARDED LIFE, AND ALWAYS WILL BE!

>>In order to do that, you have to educate them and explain things along the way. If you are willing to do something like that, please make it known. I encourage those of you that want to make things "better" to use your personal along with your call sign. <<

>Some people (and I include myself) tend to be blunt and straight to the point. This can be interpreted as copping a superior attitude, and may turn off other people, even it it was unintentional. There is a fine

line between "explaining" something, and pounding it in for those that are a little slow, or stubborn. <

Slow or stubborn to to see the light as YOU see it is a goal most have already accomplished, intentionally. NO IT IS SLOW CUZ YOU COCK LICKING HOMOSEXUAL ILLEGAL FAGGOT KEYCLOWNS TRY TO JUSTIFY YOUR FAGGOT ACTIONS AND WE READ YOUR POSTS AND LAUGH OUR FUKKIN ASSES OFF!

>>I'm sure that there are more than a few folks that post and read here that could easily end up being respected members of the Amateur radio ranks if properly nurtured. Even if some / most of these people don't become licensed amateurs, they will have at least gained knowledge as to what the TRUE nature of the Amateur community is about. Do us all a favor and become an "Elmer". Everyone like's an "Elmer" more than they do a "Peckerhead". While i know that there are more than a few "Peckerhead's" on each side of the fence, it won't be hard to tell them apart from the people that really do care once we can get going. That is, IF we can get things going. <<

>Many CBers have expressed the opinion that they have no desire to become hams. <

And therein lays your problem. So what?
What business is it of yours if a cber wants nothng to do with hammie radio? You just can't get over yourself. NO FAGBOY, ITS YOU THAT HAS A PROBLEM. YOUR PROBLEM IS THAT YOU CRAVE SEMEN AND ARE AN ILLEGAL FAG KEYCLOWN WHO SUCKS COCKS FROM A TRUCKSTOP FOR MONEY!

>Despite the vast increases in privileges, and spectrum, and the relative ease of the exam today, they stubbornly refuse to go the route.<

Actually, what has unfolded here, is your
inability to comprehend why people don't see it your way.
NO FAG ASS, ITS YOUR INABILITY NOT TO CRAVE COCK IN YOUR FACE AND NOT TO BE AN ILLEGAL FAGGOT SPERM SUCKING KEYCLOWN! It's actually amusing the extent you go.....NAH, AMUSING TO SEE YOUR FAG ASS TRY TO JUSTIFY YOUR CRIMINALITY BY ATTACKING OTHERS. YOU SAWED OFF FAG PIECE OF WORMY DOG SHIT!

> Now there could be many reasons for this. <

You don't have to understand WHY, Dave. Just accept it instead of creating such problems for yourself and others. THE ONLY OTHERS HAVING PROBLEMS ARE THE FAGGOT ASSED DICK SUCKING ILLEGAL FAGBOY KEYCLOWNS ON THIS NG. THEY WILL ALWAYS HAVE PROBLEMS COCK SUCKER! THE ANTI'S ARE HERE TO STAY AND YOUR FAGGOT ASS CANT DO SHIT ABOUT IT. YOU SHOULD SHUT YOUR SEMEN CRAVING GOBUTET AND GO BACK TO THE TRUCKSTOP AND WORK! BETTER TAKE THAT KID WITH YA, LOOKS LIKE HE"S GETTIN THE AGE WHERE HE WILL SOON NEED A TRADE!

>Many are turned off by the "ham culture", as it were,<

No! Not as it WERE! AS it stands in HERE, as demonstrated by "hammies" such as yourself, with no regard for anyone else,
HAW HAW HAW! YOU ASSWIPES ARE SOOO ORIGINAL! YOU ARE BLAMING THE HAMS FOR THE FACT THAT YOU ARE FAGGOT ASSED DICK SUCKING ILLEGAL CHUMP ASSED KEYCLOWNS! unless they conform to the ways you hold dear! YOU CAN DISH IT OUT TWATFACE, BUT YOU CANT TAKE IT CUZ YER A FUCKING QUEERBOY!

> even though you can create your own culture if enough of your friends upgrade as well. <

Not pertinent to cb in anyway whatsoever. ANTI BOYS OWN THE NG YOU SHIT LICKING FAGGOT ASSED DICK SUCKING PIECE OF SHIT! WE DECIDE WHAT IS PERTINENT, NOT GAYBOY SAWED OFF FUGGLY KID MAKING ASSHOLES LIKE YOU!

>Many, I suspect (although they'd never admit it), are truly afraid of the test and of failing it. <

And many already have a hammie license. JUST SHOWS HOW DUMB THEY ARE. And many have already let one expire.LIKE YOUR DISEASED BRAIN EXPIRED! Gee Dave, kinda blows your theory all to hell.BETTER TO HAVE A THEORY BLOWN THAN BE A FAGGOT ASSED COCKSUCKING PIECE OF SHIT LIKE YOU!!

>Imagine the blow to one's psyche to fail, what everyone touts as, an "easy" test. <

That's it Dave, further insult all those who don't have a license, INSULT AWAY! YOU CB FAGGOTS ARE CRIMINALS! but
you ought to try to disguise it a little better,
AS IF ANYONE WOULD GIVE A SHIT IF YOU FAGS FEEL BAD ABOUT BEING LABELED PROPERLY! POOR WIDDLE TWITHED, ALL OFFENDED AND SHIT! BWAHAHAHHAAHHA!
as one can tell you are talking yourself into an anger position
BETTER THAN THE GAY SEX POSITION YOU TAKE EVERY DAY WHEN YOU LOWER YOUR FAGGOT ASSED LIPS TO THE DICKS OF EVERY LAST MAN YOU CAN FIND TO DO IT WITH! BETTER THAN YOU BEING A RECTAL BITCH BOY, TOO...YA FAGGOT PIECE OF DOGSHIT! right before our very eyes.
Is this "failing of a license" anything like how you feel due your inability to grasp why all cbers don't become hammies? Feelings of helplessness and no control? I bet it is. NO, IT IS LIKE YOUR LACK OF COMPREHENSION THAT YOU ARE A FAG ASSED DICK SUCKING CRIMINAL MORON!

>I just don't understand why someone, who enjoys the thrill of freeband DXing, who operates a ham rig, would not want to upgrade to ham radio, where the DX can be found anytime, and not just on 11 year cycles? <

That is what I have been saying all along,,,you don't understand. YOU DONT UNDERSTAND THAT YOU ARE A HOPELSS HUNK OF SHIT WHO SUCKS THE COCKS OF STRANGE MEN IN TRUCK STOPS! FAGGOT MOTHER FUKKA! So what did you do when confronted with something you can't comprehend......you insulted them. This meshes nicely with your reluctance and stated dislike for change. YOU FAGGOT ASSED DICK SUCKERS WILL NEVER SEE ANY CHANGE. YOU HOPELESS PIECE OF DRIED CAMEL SHIT!

>Hey, I agree with your proposal, but like the realist (some would say pessimist) that I am, I see too much difficulty succeeding with it. <

Because you intentionally add to the problem. You just insulted all cbers, THEY ARE NOT CBERS! THEY ARE ILLEGAL FAGGOT ASSED DICK SUCKERS JUST LIKE YOU TWATHED!
yet sit here and attempt to play martyr.

>I try to offer up information to help people see things more clearly.<

Most already have their views. THE VIEWS OF CRIMINAL MINDS LIKE YOU, YA STUPID ASSED FUGGLY KID MAKING ILLEGAL FAGGOT ASSED DICK SUCKER. Most aren't interested in seeing cb the way you do, that has been proven time and time again..THATS BECAUSE THEY ARE ILLEGAL FAGGOT ASSED DICK SUCKING KEYCLOWNS

I think your radical views and being in the minority MINORITY MY ASS FUCK FACE! PEOPLEWHO RESPECT THE LAW ARE NOT THE MINORITY, MORON!is taking it's toll on you.

> If they understand it, great! If they refuse to accept it, then there isn't much more I can do. <

Why, you can always come in and let loose with a string of insults and present a one sided-argument and insult all cbers
THEY ARE NOT CBERS THEY ARE ILLEGAL FAGGOT ASSED DICK SUCKERS LIKE YOU! like you just did.

When do you ever have a valid point Randy, I think you here more for the entertainment/troll value rather than helping people or learning about things.

Your posts have no point to them either why you being a hypocrite?

> That's just two transistors and a diode.

The design you are describing above sounds like it would only be some strange form of direct conversion with some 'wasted' circuitry in it!

The whole purpose of a superhet is to bring the received frequency down to a lower, intermediate frequency that the following stages of amplification can be optimized for, and then the diode detection is done after that IF amplification.

If you don't have an IF amplifier in your design, there is absolutely no need for a local oscillator or a mixer; so you might as well just use those two transistors for Q-multiplication and RF amplification and then envelope detect the result with the diode.

> You might want to add an IF amp for better sensitivity,

AH!, Now you are talking about making it into a superhet!

> and an AF amp to use a speaker

That would would be a good idea in either case......

> (or just send the output to your stereo). And it's just as simple with

Isn't that how they came up with the first super-regenerative receiver?

Hello Keith:

Yes right back at ya, have a happy and a safe 4th of July.

We is all gettin ready fer Fire Works and such here in the Mojave Desert, not the safe and sane kind, but the unsafe and insane kind, Ya Hoooo!!!

Got a big BBQ to go to, with Rock n Roll Music, up the side of one of the local Mountains, its a lot cooler there, and has a nice view. There figuring on a few dozen folks from all over. There hired this BBQ Professional guy to come and BBQ all the meats and such. Will even Have a little Mexican food out for all to have. I can't wait.

Jay in the Mojave

I'll get to revisit the good old days thursday, I'll be riding in one
of the Toledo Ohio FD rigs. Ought to prove interesting.

im well aquainted with your problem!!
you obviously are a diehard cb-er (as i am),and like to have a radio in all your vehicles. of course you dont want to mess up the paint,or plastic on a nice car.you certainly dont want to drill any holes. i was faced with a similar problem a few years ago when i was actually lucky enough to own a delorian.it was an 81 with 25,000 actual miles.naturally i didnt want to do anything to "mess up the car" i settled upon a "through the glass" type of cb antenna. its tunable,and i believe they are still available. they wont handle more than a few watts. so you wont be running a linear. but it sufficed to find out where the smokies were,and to answer the truckers questions,like "gawd almighty,whut kinda kar is that?) these antennas also look like an over sized cellular antenna,so they dont look silly on a nice car. hope this helps. gunslinger

I'll post this one more time.....

The viruses that are being sent to me from ogp@texoma.net do
not affect my computer in any way other than the fact that
the computer informs me that it caught them.

These are from today........

Stan, that may be the ticket, you should also be able to run the ground strap to the frame without any problems.
Get your self a Firestick or similiar style fiberglass antenna, it may actually look pretty good.

Stan for $44.95, not sure if your into the do it the yourself but you may
be able to fabricate the bracket yourself rather cheaply,
I am sure if you took a license plate and used it as a template heck a good
cordless drill and some drill bits, few nuts and bolts
and a 1/4" or so piece of aluminum for the actual bracket,and a smaller
piece bent like a "L" to hold the antenna, then go to radio
shack for a couple of bucks and get the 3/8" x24 thread stud to attach
coax/antenna, doing it this way you may be able to make
it more of a "custom" fit to your car.

Power House,
You're probably right. The problem with any digital
(computer) signals is that they act sort of like a
square wave generator, very fast 'on'/'off' times, an
almost 'vertical' slope on the signal envelope. Also,
a square wave generator makes the absolute best 'noise'
generator you can have! For the signal to work well
with a computer, these fast on/off times are necessary,
meaning that they are the "worstest" thing you can have
for a radio. (Computer and radios hate each other)
About the only thing you can do to 'cure' this type
of noise is to shield the device very well, that encludes
the cables to/from the device, which costs money. The
people making the devices are only going to do the very
minimum that they 'have' to do to produce their devices.
Sometimes, that isn't enough (as you found out). A five
gallon bucket of torroids, and wrapping the device in
some shielding material helps. It also increases the
internal heat of the device, so it can also be self-
defeating. The absolute, most 'bestest' means of curing
this type of problem is to have a midget belly-dancer,
painted blue, do her 'thing' while the device is in use.
NEVER fails!
'Doc

You don't even need an IF amp, just a good IF filter. The whole point
of a superhet is to convert the signal to a low IF because the lower
frequency of the IF is much easier to filter to a narrow bandwidth
than the higher frequency of the RF signal, and that bandwidth doesn't
change with the RF frequency as it does in a TRF receiver. Adding an
amplifier to the IF stage is usually a good idea, but not necessary.

>> You might want to add an IF amp for better sensitivity,
>
> AH!, Now you are talking about making it into a superhet!

It's a superhet regardless of IF amplification. But if you are going
to leave out the IF amp, you might want better gain from the mixer.

>> and an AF amp to use a speaker

>
> Isn't that how they came up with the first super-regenerative receiver?

If I remember correctly, a super-regen is a regen that uses a seperate
oscillator, with a freq somewhere midway between audio and the RF
freq, to intermittantly quench the oscillation of the detector. It's
not a superhet by itself, but might be a pretty good design for a
superhet detector stage.

Yeah your right, the cbers had rather stick with their myths and
misconceptions than dig for the real facts.

I hear almost as much fighting on 2 meters as 11 meters. On 75
meters, all they do is fight over frequency rights.

Sean,

I think what goes on in this NG is not a ham vs. CB issue. A ham
license is not a guarantee of technical expertise or morality. Bill
Eitner and Toll Free are both good examples of this. All you need do
is look up the archives to see their "teaching" consisted largely of
promoting illegal CB. Attracting flies with honey is fine, but that
does not mean anyone should turn the other cheek when assaulted by
ignorance. Vinegar is appropriate, especially in the case of someone
like Twistedhead.

Not to take twisty's side of the argument, but how do you know that
every ham abides by the ARRL handbook? I have seen many "myths and
misconceptions" propogated by HAMS, and many CBers do things by the
book. I think it is people like -you- that are propogating the myth
that CBers are all technically incompetent. You wouldn't be a ham by
any chance, would you....?

Actually there are some pretty competant souls up here and I, for one, have learned a lot or been jolted into actually understanding some things I knew. You do not ever learn it all.

Amateur radio is generally fixed but becoming more mobile where CB since the Double Nickels days is more mobile but becoming fixed. The ham bands are all over the spectrum where CB is camped in a mildly wierd part of the low-VHF spectrum and exhibits characteristics of HF and VHF at various times and places. So it is not too surprising that mythologies are different but probably equally held. And hanging antennas on a big rig pulling a 45' or so aluminum box around is an art form.

And both services are capable of making mountains out of molehills. A single fact, for example that a dipole in free space reflects 73.3 ohms, has produced any number of 40 meter dipoles fed with RG-11 that don't work for squat. The first chart in the Antenna section of the RA Handbook for eons shows the effect of ground reflection on feedpoint impedence, which is far more pronounced on horizontal antennas than vertical ones to begin with. So it is not too surprising that somewhere along the line mounting one's antenna a half-wave multiple off the ground became a mantra.

Proving once more that Clark's Axiom applies: A technology sufficiently advanced cannot be distinguished from magic. And it should not surprise anyone that some treat it as a religious experience.

Let Freedom Ring!!!!!!!!!
Yes the FCC taliban is on a jihad
Now many cb'er are finding out that building your own linier is ALLOT
cheaper then the standard dollar per watt standard.
Also b4 we used to stick to our neck of the rf spectrum.
NOT ANY MORE:)
More and more big radios go above 28mhz and "pump it up!" soley to claim new
territory for the cber. And we will get it too.
Liniers are getting bigger all the time and will continue to grow.
The reason that the fcc is going after retailers is cause they are too few
to take on the sheer number of BIG Radio enthusiasts!

Troll Troll Troll your boat gently down the stream.

We haven't lost any of the world's largest UHF allocation 420-450 (you might be thinking of 220-222 some years ago, but we now can do digital in 218-220), we are about to get 5.25-5.4 plus primary at 2400 plus some LF space and there are more licenses than ever. It looks like the world may get our 7-7.3 band and we will be rid of broadcast. Dying my pink patootie.

If a Ranger qualifies as a ham rig with a receiver inferior to a 1938 Zenith, OK I guess.

And how the hell much danger can we be in from someone who can't spell 'linear' let alone build one? Linear, as in 'along a line' as in the output bears some resemblance to the input.

Keep on tootin' as the sunspots are a fallin'.

Dick NBK

small ps.

For those whose idea of freedom is to avoid this leadhead and those like him:

http://ah0a.org for Morse Academy. Read the directions, buy a cheap set of earphones so those near and dear do not strangle you, and take an hour a day for a month or less.

Depends on what kind of coax you're running. Especially with verticals, ground loss at low heights is excessive. Mounting higher can gain you 6 dB over a lower mounted antenna. That is quite a bit of coax. Twist's advice is short, simple, and CORRECT (with beams/quads/what-have-you as well).

73 from Rochester, NY and you guys have a nice holiday!

Dick, at the lower (in terms of wavelengths) heights, antenna impedance varies considerably. As the height increases, the lumps and bumps of the antenna impedance smooth out. On 75 or 160, ya takes what ya can get. On 11 meters, one can get an antenna up pretty high in terms of wavelength. Would you know if the Eiffel tower is up for sale? ;)

73 from Rochester, NY - have a good holiday!
Jim
ps - I DID try a halfwave vertical on 160 once, but my Johnson Ranger 1 wouldn't match it Yep, 250 feet high - but that's another story.

Muenzler, onc again continued his charades with:
>
You sure are good at making accusations. Where's the proof? Put up or shut up. I'm beginning to wonder if you and Moparaholic aren't the same person. Your personalities sure match pretty closely. Childish. Kevin, WB5RUE<

Umm,,Muenzler, YOU made the claims that can't be substantiated. YOU made the accusations that you were popping radio violators. I merely claimed it not true. I didn't insult you, didn't call you a name, merely asked for you to substantiate your claims, which you can not do. You have been unable to do so and have been directing your anger toward members of this board. Just what we expect from a malcontent, you are making the topic personal, effectively sharing your lack of communication skills, and you are unwilling, probably unable to see yourself as the masses do. You made the claim, the burden of proof is on you. As you so crudely and rudely suggested, "Put up, or shut up." Take your own advice and stop acting like a spoiled child caught in a lie. Your tail was clipped, you can either live with it and move on, or simply dwell on it and continue to insult all those who may disagree with you. You have become very adept at the latter, solidifying your position quite nicely.

>Not to take twisty's side of the argument, but how do you know that every ham abides by the ARRL handbook? I have seen many "myths and misconceptions" propogated by HAMS, and many CBers do things by the book. I think it is people like -you- that are propogating the myth that CBers are all technically incompetent. You wouldn't be a ham by any chance, would you....?<

Yea, we wouldn't want you "taking sides", especially the correct one.
One more that feels it's about "taking sides". It's not, it's about dispelling with the bullshit.
Please explain how I was "incorrect", in any way, shape or form, that 60 feet for a CB antenna is less efficient than that of one at 36 feet.

The impedence chart out of the Handbook, and it has been the first chart under Antennas since 1955 that I know of, pretty much says the same thing. Dipoles cross 73 ohms at halfwave intervals. Height also affects the center angle of the lobe with it getting flatter with height.

At the time I was wondering how the wavelength height became a mantra and that is as close as I could come. It also happens that a 5/8 at one lamda makes the tip about 58 feet where 60 is max legal.

Depending on one's aim in life, more height is generally preferable to be sure but at the risk of opening 'skip zones' owing to the lower take-off angle. Denizens of 75 generally have a vertical, I had a HyTower, plus a low dipole where the near-vertical angles fills in the nearer skip zone so one can trade gall bladder stories with the near-locals. I got a good lesson in this with the hytower when I got into a QSO with three guys along Lake Erie from Toledo to Buffalo from St. Louis. The one near Toledo gave me a so-so report, the guy near Cleveland said strong, and the guy in Buffalo wondered how many kw I was running. Lovers of big loops have been known to raise and lower them for effect.

One more case where HF and VHF practices tend to cross at 27 MHz.

Dick, NBK

>Sean,
I think what goes on in this NG is not a ham vs. CB issue. A ham license is not a guarantee of technical expertise or morality. Bill Eitner and Toll Free are both good examples of this. All you need do is look up the archives to see their "teaching" consisted largely of promoting illegal CB. Attracting flies with honey is fine, but that does not mean anyone should turn the other cheek when assaulted by ignorance. Vinegar is appropriate, especially in the case of someone like Twistedhead.
-Aaron-<

Well, your unprovoked malice is just what one would expect from you. After all, it is I that is responsible for your creation, by virtue of ruining your rep with truths. It is I that made you crack under the pressure of absolute truths. It is I that made your real name and call "mud" by posting your antics to share with all. It is I that is responsible for you not being able to show yourself. You used to post quite freely here, but got carried away with your inability to hold your morbid tongue, and have lost any respect you were trying for. Again, it is I that drove your uncouth lying trollish self underground, and there you dwell until I decide to take you out for entertainment purposes.
Do yourself a favor, go upgrade.

ps - I DID try a halfwave vertical on 160 once, but my Johnson Ranger 1 wouldn't match it Yep, 250 feet high - but that's another story.<

Dunno how high the Eiffel tower is, but I'd love to try it. I have drove to the top of a high parking garage and messed around with an Antron a time or 2, and have set up the same antenna on the balcony of skyscraping hotels. I am certain that if the radio was on the bottom floor and coax needed to be ran that long, it would no doubt create a situation less than desirable..

Kind of reminds me of the Playpen Rebellion called the 60's. If the art historians and sociology majors had gotten any of us hard-science guys into the movement no building would be left standing.

They talked a bozo into setting off an ammonium nitrate 'stink bomb' in Madison blowing out the back of the building and several people. Last I heard the bozo was a member of the WI bar.

Let the Ham frequencies die.

Why would any one want to use them. All I hear on the Ham bands is
the un-welcome club. I hear that on this news group too. Who in their
right mind would want to put up with such sour old men.

Instead, just turn your computer on. You can talk worldwide. Or if you
like crank up the transceiver and talk wherever and whenever you
choose. Ignore the sour old men with their sour attitudes and
freeband all you want. Just keep one step ahead of the old men.

P.S. Old men are easily outrun.

I don't know ... I think if you actually met some of the hams you'd find they aren't the way a few techs are presenting the image. Some are, of course, but most aren't. A while back a thread was going around about a get - together with some of the more vocal folks - Voobner, Twistedhed, Scott (unit69), and a few others come to mind. It would have been interesting. I'd be willing to be most would cool off, quaff a few beers and have a good time - and be back at each other the next day in the newsgroup! As far as ham radio being in decline, don't hold your breath ...

Have a good holiday,
Jim

Be careful Adam! If you agree with me, thus disagreeing with Mr. Twisty,
you will be called a liar even though there isn't any evidence. Apparently
all it takes to be branded a liar by Twisty and Mopar is to disagree with
them. Again, I wonder if they aren't the same person.

19 inches of rain here since July 1, I think our drought is over.

Kevin, WB5RUE

Oh I am sure that ain't the real name, as we have all seen before.

Gettin all fired up for the 4th of July BBQ and socializin.

Jay in the Great Mojave Desert, ... just down the road ah ways from the
fillin station.

Hi Dennis.

First of all, the virus sends itself... the person is not to blame and may
not even realise.
Secondly, that type of virus is known for "spoofing" addresses. The virus
takes an address from the infected system address book and places it in the
header.
So tracking the actual infected system is not so easy... check the IP number
and see which ISP is being used, that may help.

Brainbuster.

Ground losses depends on the type of soil and amount of ground radials you have under your antenna.
Jim to say mounting higher can gain you 6db is a vague statement and an opinion on your part at best. Going from a ground mounted vertical to one that is 2 wavelengths in air will yield greater gains than going from say 1 wavelength above ground to 2 or 3. Especially at HF frequencies

How many Cbers are running hardline compared to rg8x ? No one said the coax loss would overcome the height gain but that it should be taken into consideration.

Of course he's spewing bullshit -- the line he quoted was in context to his anonymity, it had nothing to do with sending viruses or hacking firewalls. Randy is the one that has threatened to crash firewalls, and Phil has claimed to be capable of much, much more.

But if these are really viruses being sent out in the email, the recipient needs to quit whining on the newsgroup and forward the information to the proper authorities; emailing viruses and other forms of hacking are federal crimes that -are- enforced.

We're coming, we're coming, our brave little band
on the right side of temperance we do take our stand.
We don't use tobacco, because we do think
That people who use it are likely to drink.

chorus

Away, away with rum by gum,
rum by gum, rum by gum
Away, away with rum by gum
The song of the Temperance Union

and many many more verses.

Finally figured out what the AKCs remind me of.

Velvet Codpiece, tell no little lies.

Well, let me tell you.......

A person who is the President of an organization near me recently posted a sign. On that sign, were at least a half dozen misspelled words. What is this guy's background? TEACHER!!!!! A few who read the sign and knew his background shook their heads in disbelief - asking how he could have been in that position.

Another teacher I know, believe it or not, didn't know how to....hang on to your chairs... address an envelope!

Now I am NOT saying any or all teachers are bad... But you would think teacher #1 would have edited that sign before posting. It sure didn't make him look too worthy of his "educational" background. As for #2? Bankrupt in common sense?

As advanced as this country is, we still have a LONG way to go in the education area. From what "I" see, it's going backwards, not forward. Everyone makes errors, but those were blatant examples. Frightening!

My two cents.

Hi All

I have owned many radios over the past 30 years and have found pictures of all of them on the net except 1. I can't remember the Radio Shack model number but I would know it to see it. It was a 40 Ch SSB mobile with an all black face. It was all push button, (no rotary CH selector). It had 40 Ch scan and channel change on the microphone. It only ran for about 1 year in 1980 or 1981. It had many problems and was not a good radio. Every time you turned it off it went back to Ch-1 and had a bad frequency drift so I only had it for about 2 months and traded it in for an other model. If any of you can remember the radio and come up with a model number it would be appreciate. I check this NG regularly so if you could just post it here. Thanks

That's right Dick, ignore the illegal-CB trolls (who started this thread) and instead spread disinformation that pro-legals are prudes. Well, at least you admit to taking sides.

What a joik--what a maroon!! Serves 'im right.

Jerry

On the enforcement scene, it probably does not pay top brag on the Internet
that you have a banned C-B amplifier. Why?

--
Riley Hollingsworth: "The San Francisco Office of the FCC conducted an
inspection of the station of Stanley Clewett, KF6IKC of Reading California.
Clewett had posted pictures on his web page of what was purported to be a 10
kilowatt amplifier which he claimed to be using on CB Channel 6 -- perhaps
not
the best type of photograph to put on a personal web page by an Extra class
licensee. This case is still open and we will report more details later."
--

The FCC says that no other details of the inspection will be released at
this
time. This is because the matter is still under review. (FCC, RAIN)

Do you ever hear from Wendy? The Maltinos are a pretty big family,
word is they own half the town and do as they please. Big brush fire
started in the woods a couple years ago and Pinellas County Sheriff
told Richard to evacuate, but he wouldn't budge. Incidentally, if he
ever has RFI come thru his TV or stereo let me know, I can point him
in the right direction, so to speak.

Sparky, you are a dumbass. You show it and you don't even realize it.
Show us how smart you are and do the calculations to determine how
much current a 14.14 V (4 watt) signal passes through 5 pF at 27 MHz.
You will find that your number above is off by four magnitudes.

[More of Sparky's non-responsive ramblings snipped]

Talk about confusing the facts! What is a "non-reactive transmission
line?"

The fact of the matter is that forward voltage is ALWAYS IN PHASE with
the forward current. The only time the current can be out of phase
with the voltage is when there is a reflected signal summing with
the forward signal -- and it doesn't take a genius to know that a
reflected signal does not consist of a forward voltage or current.

> >> and the phase of the components of the reflected power is shifted from

> that was the whole basis of your argument several months ago.

Sparky, again it is you who does not understand the concepts involved
here. Sure, it induces an AC signal. The key to the understanding is
that we are talking about AC. It is an alternating current. There
is no way to look at this single parameter and determine the direction
of the signal on your coax. The forward signal induces an alternating
current and the reflected signal induces an alternating current. They
look the same.

> >A directional power meter will correctly measure power in a given
> >direction regardless of the load impedance.
>
> False. The readings can be distorted by standing waves. The proof
> resides in the experiment that you refuse to do.

Sparky, I've done equivalent experiments countless times. They do
not agree with your claim. And there is no underlying theory to
support your claim. You're making this up -- plain and simple.

> >> IOW, if the current at point A on a transmission line reaches it's

This answer is fluff. You've told me nothing (because you simply
cannot). You have not answered the question. Lay a little first year
physics on us. Show us how smart you are.

> > You cannot determine the direction of the current by a mere inductive

> only relevant when the the I/E phase of the reflected power is shifted

> by the reactance of the load.

Hold on here. I'm not letting you off the hook for this inaccuracy
either. This has NOTHING to do with reflected power.

You said, "forward and reflected powers are propagated at the impedance
of the transmission line..."

That means Vf = 50 * If
AND Vf is in phase with If.

But you also said, "voltage and current of the forward power are
directly opposed."
This means Vf is out of phase with If.

These two statements are contradictory. You need to explain yourself
and this obvious contradiction. Where do you get this stuff? ...out
of your shorts?

I'll give you a hint: one of the two statements IS correct.

> >I explained EXACTLY WHY you need to sample BOTH voltage and current but

>
> Since the purpose is to get the lowest SWR possible, a reduction in
> VSWR is going to coincide with a reduction in ISWR...

So far, so good.

> and consequently a reduction in the I/E phase of the reflected power.

Wrong. E and I of the reflected power always maintain the same phase
with respect to each other.

If you are referring to the phase of the reflected power with respect
to the forward power, it is possible to vary the phase of the reflected
power a full 360 degrees without actually changing the amount of
reflected power (or the SWR).

> If, as you insist,
> the current and voltage are 180 degrees out of phase for the reflected

> requires both voltage and current measurements -- then your whole
> system of SWR measurement fails in a puff of phase. Do the math and
> you will see your error.

I did the math and it works. I showed you, dumbass. Show us how the
math fails. "Do the math" is another fluff response. It is a
non-answer.

> >> While the o-scope might show a distorted

> Only when they are in phase or 180 degrees out of phase. Adding two
> sine waves of the same frequency but are phased 0 > r > 180 > r > 360
> degrees apart does not result in a sine wave.

Sparky, again you are showing your ignorance. This one can be
easily demonstrated. Just try to add two sine waves at the same
frequency with ANY phase difference and see what you get.

Go ahead and do it. If you are right, I will kiss your feet.
If I am right, you must agree that you are a dumbass.

> >> But power meters do not
> >> read instantaneous voltages or currents,
> >
> >Wrong! Stop already!
>
> What? Are you going to say that power meters can read
> voltages/currents at 27 million times per second? Yeah, right.

No problem. The voltage signals and current signals are
summed with passive analog circuitry and then detected with
a diode.

> >> they read voltages or
> >> currents averaged over time.
> >
> >You cannot explain how your theory of operation provides a
> >directional reading. It can't!
>
> It does as I explained before. Like it or not. It's called inductive
> coupling and it's a fact, so deal with it.

You did not explain how inductive coupling provided a directional
measurement. It is a fact that you did not answer this simple,
direct question. What's the problem? You can't deal with this
question.

> >> And since the interaction between forward

The forward and reflected waves are a function of time but the
standing wave is not. The standing wave is fixed; it does not move.
The points of current minimum, current maximum, voltage minimum and
voltage maximum do not change.

> >> standing waves will be read concurrently with whatever

>
> True. But any standing wave is also constant along the transmission
> line.

Hold on there!!!! It's another contradiction by Sparky (you have
so many). You just claimed that standing waves were a function of
time; now you claim that they are constant. Now, you agree with me.
Hmmm.

[snip]

> The standing wave
> deviates from the characteristic impedance of the transmission line
> proportional to its magnitude.

???

> you did) do you think you could complete that quotation now?

How soon you forget! I showed how the book DID NOT SAY WHAT YOU
CLAIMED IT SAID! You lied plain and simple. You have no credibility.

> >Absolutely not true. Sparky, you don't know jack shit.

> experiment.

No, it does not "blow my connector theory out of the water." And you
are ignoring the fact that the connectors are not the only item I
identified in the system (how convenient!). I also pointed out that
the coax may not truly be 50 ohms.

Answer this question: Is it possible to get a 1:1 SWR reading with
55 ohm coax?
I think the answer will blow your response out of the water.

> >Saying that it doesn't matter where a connector is placed in
> >the transmission line is like saying that it doesn't matter
> >where you put the antenna coil.
>
> Oh please! Are you now going to say that to throw a pebble is the same
> as moving a mountain?

WTF are you talking about? Do you honestly believe that it does
not matter where a device which introduces an impedance change is placed
in your transmission/antenna system?

[snip]

> Or did you sleep through statistics?

Sparky, I do not believe that you took college physics or statistics.

> >> >And be sure your coax is truly 50 ohms impedance -- don't rely on

>
> Don't get anal with that comment: I was addressing the fact that RS
> isn't the best place to get coax. I agreed with you. Or do you
> disagree with your own comment just because I agree with it?

Well, wait a second. You're doing your experiment with coax that
may not be 50 ohms impedance. You haven't verified it. You don't
know that it is truly 50 ohms. But you accept the potentially flawed
experimental results as proof of your claims.

Sparky, believe me, I've done equivalent measurements countless
times. I don't need to do your experiment. I've worked with
vector network analyzers from tens of MHz to tens of GHz. They
directly measure impedance (which can be directly converted to SWR).

And I understand their theory of operation (which wouldn't work if
what you said were true). I've been there; done that.

> (forward power impedance being low or high compared to the load
> impedance).

Oh, boy! Sparky, you are just plain wrong. And I'm growing weary
of correcting you. The location of the nodes along a transmission
line are directly related the phase (i.e. the real to reactive
relationship) at the point of mismatch.

> >>It is
> >> at these points where power measurements are the MOST ACCURATE, not

It is just as persuasive as your statement.

> inductive pickup (the function of which you deny). The funny part is
> that your denial is in partial contradiction to your claim that SWR
> can be read accurately at any point along the transmission line.

Oh, it does indeed create a problem with the inductive pickup.
The net current is zero. An inductive pickup detects nothing.
But you have a problem here, Sparky. My meter still shows forward
power even at this point where the net current is zero. How is that
possible? How can a meter that senses current show a reading when
the current is zero? Hmmm, could it be that the meter is also sensing
voltage? Could it be that what I say is correct? (should be a
no-brainer by now)

> >[snip]
> >> The antenna manufacturers are not recommending 18

>
> Another persuasive argument -- "No they aren't". Care to elaborate why
> antenna manufacturers recommend 18 feet of coax? Oh, that's right, you
> can't. I forgot that you don't have an explanation for that, even
> though you have an explanation for why everything I say is wrong.

Again, my response is just as persuasive as yours.

My antenna manufacturers make no recommendation regarding coax length.
They have no reason to.

> That's ok, CLP, I understand -- after all I have had experience with
> other obsessed individuals like twistedhed, Phil, and Randy. I
> understand that the next "I hate Sparky" support group is open for new
> members -- maybe you should apply.

I don't have a problem with multiple individuals as you do. Maybe
this should tell you something.

I do have a problem with anyone spreading fiction as fact and
propagating myths regarding SWR and coax length.

> Did you miss something really fundamental here? If the characteristic
> impedance of a transmission line is the signal impedance where the
> transmission line works to contain the signal, doesn't it stand to
> reason that if the signal is not that of the characteristic impedance
> then the transmission line will not contain the signal?

It is not a matter of containment; it is a matter of propagation.
The characteristic impedance dictates the voltage to current
relationship of the signals. Anything different is reflected
at the interface.

> After all, how
> does a transmission line work? Isn't it a distributed balance of

>
> NO! All signals DO NOT propogate at the characteristic impedance of
> the coax. You can run DC through your coax, but does the impedance of

> that DC need to be 50 ohms? Of course not!

Sparky, DC does not "propagate." Did you ever try to talk on the
DC band? I'll bet you didn't get many contacts.

We are talking about electromagnetic waves here (or did you forget?).
There are no electromagnetic waves at DC. Plug a frequency of zero
into your Maxwell's equations and see what happens.

[snip]

> >Consider this scenario:
> >What if you transmitted short pulses such that the forward power

Wha are you talking about? I have facts and reasons. That's more
than you can say.

> Do
> the experiment. Actually, I encourage anyone remotely interested in
> this discussion to do the experiment. See it for yourselves. Then come
> back here with your explanations and/or excuses.

By the way, I never did get your excuse for totally misrepresenting
what was in that book that you referenced. You lied about its
contents to support your claims. I showed this in excruciating
detail. What's your excuse? Why would anyone need to lie about
the contents of a reference book?

385. Re: Original Text of Frank "Sparky" Aaron's SWR web page.

>much current a 14.14 V (4 watt) signal passes through 5 pF at 27 MHz.
>You will find that your number above is off by four magnitudes.

For starters, I meant to say a 1mA meter (I don't think you, me, or
anyone here has a wattmeter with a 1uA meter -- too bad you coudn't
see my mistake and correct me instead of nitpiking).

Anyway, if you shunt the cap right to ground it will pass 12 mA. If
you have ever seen a schematic for a wattmeter, these caps are NOT
shunted to ground. Why? Because it would pass 0.17 watts, which is
more than 4% of the signal. That's not 'measurement', that's a power
tap! So if they are not shunted to ground, what do they connect to?
Well, usually a fixed resistor somewhere in the neighborhood of 10K,
which by a rough estimate will give you the 1mA you seek. So you are
correct....

BUT WAIT! If your 5pF cap will give you full deflection on the meter,
why bother with the inductive coupling? By golly, some wattmeters
don't! Some wattmeters work via capacitive coupling, not inductive.
Didn't I say that somewhere before?

Also, if you read some of those schematics (try it sometime, you might
learn something) you will see that most of the time when an inductive

coupling is used for the measurement of power, the caps aren't even
connected to the meter's rectifier! Did you ever think that maybe
those caps are just used to compensate for the inductance of the
unshielded section of transmission line used for the pickup wire plus
the inductive load of the coupling? Of coure you didn't, "dumbass".

>> now backpedalling away from.
>
>Sparky, you are delirious. And you didn't answer my question.

Hey, I bet even Rat Shack's dictionary knows this one.

Characteristic impedance:

1. The driving-point impedance of a line if it were of infinite
length. [it doesn't say 'the impedance of the signal at the
driving-point', does it? It's talking about a characteristic of the
transmission line, NOT the signal!]

2. In a delay line, the value of terminating resistance which provides
minimum reflection to the network input and output. [since this is an
instance where the transmission line is not necessarily used as a
transmission line, I'll give you a break here.]

3. The radio of voltage to current at every point along a transmission
line on which there are no standing waves. [Gee! No standing waves!
How about that!]

4. The square root of the product of the open- and short-circuit
impedance of the line. [describing a method to measure the
characteristic impedance of a transmission line, NOT the impedance of
the SIGNAL.]

Now try this, "dumbass". Take a common AC plug and a piece of coax.
Hook up the plug to the coax and terminate the coax with the resistor
of your choice (choose wisely). Now plug it in and measure the
impedance of your new signal at any point along the transmission line.
Does it equal 50 ohms? Not unless your terminating resistor was 50
ohms.

So when was the last time you actually measured the characteristic
impedance of a transmission line, "dumbass"?

>> >Now an example for the slow thinkers out there:

>Talk about confusing the facts! What is a "non-reactive transmission
>line?"

Ohmigosh! Take some time out of your day to look up what it means to
have a 'flat' transmission line. Hint: it has nothing to do with the
physical characteristics.

>The fact of the matter is that forward voltage is ALWAYS IN PHASE with
>the forward current.

Just to clear up any possible misunderstanding, are you saying that
the point of highest potential is also the point of highest current?
And this condition exists along what is effectively a series-network
of pi circuits?

> The only time the current can be out of phase
>with the voltage is when there is a reflected signal summing with
>the forward signal -- and it doesn't take a genius to know that a

>is no way to look at this single parameter and determine the direction
>of the signal on your coax. The forward signal induces an alternating
>current and the reflected signal induces an alternating current. They
>look the same.

Oh really? Well, I guess it really doesn't matter which end of that pickup the diode is connected to, since it's just AC, right? And if it's just AC, then the direction really doesn't matter either, does it? After all, the current is alternating, meaning it goes one way then the other, and you can't tell if it's coming from one end of the coax or the other, right? Judas Iscariot Priest....

But that's an interesting point of view, and I'll explain this for other readers as well:

Imagine measuring the instantaneous voltage of house current at any two points along a lamp cord and compare them. At any given time, it looks like DC, doesn't it? Current is going one way in one wire and the other way in the other, and the two measurements show practically no difference.

Now do the same thing with an RF transmission line. Make the two points 1/4 wave apart. At any given point in time, you might have zero volts at one point and max volts at the other, or you might have the same voltage at both points. It doesn't matter either way, because if you don't know which way that wave is going it's all meaningless (it's all "just AC"). You need a way to see which direction that wave is travelling.

How do you do this? It's easier than you think. As an analogy (and I like water analogies when talking electronics), think of being on a small boat on an ocean with big waves. If the bow is higher than the stern when you feel the boat rising on a wave, then you know the wave is coming from the front. OTOH, if you feel the boat rising on a wave but the stern is higher than the bow, you know that the wave is coming from the rear. You can do the same thing in electronics:

First, you add an inductive link, less than 1/4 wave in length, next to the transmission line. Then you measure the induced potential from one end of this pickup wire with reference to the other end AND ALSO with reference to ground. If potential at end A is HIGHER than end B - WHILE THE SUM OF THE POTENTIALS IS RISING - then the signal is moving in direction X; conversely, if the potential at end A is LOWER than end B - again WHILE THE SUM OF THE POTENTIALS IS RISING - then the signal is moving in the OTHER direction.

You don't need pontoons to tell which direction the wave is coming from, and you don't need caps to compliment an inductive link. Like I

said, it's basic electromagnetics, DUMBASS!

>> >A directional power meter will correctly measure power in a given

>of your shorts?
>
>I'll give you a hint: one of the two statements IS correct.

You caught me, but for the wrong reason. I should have said that when
the forward power is propogated at the characteristic impedance of the
transmission line, there is no point in measuring both voltage and
current of the signal because only one value is needed to determine
the other. OTOH, the impedances of a standing wave deviate from the
characteristic impedance of the transmission line (-regardless- of the

impedance of the reflected power), and only THEN might someone be
interested in measuring both voltage and current (assuming you really
had the desire or need to do so, which most people don't).

>> >I explained EXACTLY WHY you need to sample BOTH voltage and current but

>Wrong. E and I of the reflected power always maintain the same phase
>with respect to each other.

Yes, with respect to each other, but not with respect to forward
power. Forward I/E phase is equal to reflected I/E phase only if the
load that causes the reflection is non-reactive. That's rarely the
case.

>If you are referring to the phase of the reflected power with respect
>to the forward power, it is possible to vary the phase of the reflected

I don't think that introducing a purely reactive load is a practical
method of reducing SWR.

>
>Go ahead and do it. If you are right, I will kiss your feet.
>If I am right, you must agree that you are a dumbass.

Pucker up, "dumbass" -- I can shift the phase to give the original freq at twice the magnitude, or I can shift it so both signals cancel and I get a flat line, or I can shift it so I get a double-humped sine wave. It was real easy to measure because I have a variable phase-splitter on the bench. It's a nice piece of equipment to have when you work on a lot of professional audio amps. Got a Peavey 1.3K on the bench right now in bridge mode. Ever see what happens to a 2000 watt amp that gets hooked up in bridge mode and one of the driver amps is phase-shifting? You don't 'see' it as much as you 'hear' and 'smell' it.

>> >> But power meters do not

>summed with passive analog circuitry and then detected with
>a diode.

Now that makes sense... NOT! What the hell are you doing summing measuring power with the sum of the voltage and current when you need the PRODUCT of the voltage and current? And what is your "passive analog circuitry"? The whole wattmeter is "passive analog circuitry", even the diode! You don't even know what you are talking about, "dumbass"!

>question.

No problem at all, as you have read above. Although I'm really
disappointed that I had to put it in such a rudimentary explanation,
as I honestly thought you had studied the basics.

Now, back to the subject of this particular paragraph: Do you know how
to connect a resistor, a capacitor and a diode to build an averaging
circuit? Or did you sleep through that class, too?

>> >> And since the interaction between forward

>Hmmm.

I didn't disagree with you before, you just misunderstood the
difference between a function 'over' time and a funtion 'of' time.
Instead of looking for points to criticize, maybe you should try and
understand what you are reading, "dumbass".

>[snip]
>
>> The standing wave
>> deviates from the characteristic impedance of the transmission line
>> proportional to its magnitude.
>
>???

What's the SWR at 100% reflection? Now, what's the impedance when
voltage is doubled and current is almost nil? You don't see the
relationship there?

>> BTW, did you ever to find a copy of that book I referenced? I remember
>> you xeroxed a couple pages but were unable to quote the first few
>> words from a very important page. If you have the book (like you said
>> you did) do you think you could complete that quotation now?
>
>How soon you forget! I showed how the book DID NOT SAY WHAT YOU
>CLAIMED IT SAID! You lied plain and simple. You have no credibility.

You proved a negative? I don't think so. In fact, I asked you to prove
you had the book and not just a couple xeroxed pages, but you refused.
It was YOU that lied when you said you had the book.

>> >Absolutely not true. Sparky, you don't know jack shit.
>> >PL-259/SO-239 connectors have become the defacto standard over
>> >the years but they are not 50 ohms. Did you ever see a vector
>> >network analyzer (basically an impedance measurement device) that
>> >used these connectors? Never.
>>
>> I didn't say that they weren't 50 ohms, I said that the influence they
>> have over SWR is negligible, which is true. This is because the brief
>> impedance variation they cause is not significant enough to even
>> register on a power meter, even on a Bird. That is true, and you can't
>> prove otherwise because UHF connectors are used everyday in systems
>> that achieve a 1:1 SWR. Kinda blows your connector theory out of the
>> water. In fact it blows your whole excuse for not performing the
>> experiment.
>
>No, it does not "blow my connector theory out of the water." And you
>are ignoring the fact that the connectors are not the only item I

>identified in the system (how convenient!). I also pointed out that
>the coax may not truly be 50 ohms.

How much total variation are we talking here? Is it enough to prevent
a practical 1:1 match? If you think the coax might not be 50 ohms,
measure it. Oh hell, that doesn't even matter anyway, just find a load
that gives you 1:1, then remove it to get some standing waves. You are
just trying to complicate the issue.

>Answer this question: Is it possible to get a 1:1 SWR reading with
>55 ohm coax?
>I think the answer will blow your response out of the water.

Blow this: If you think the coax is going to make a difference,
measure the damn thing, or use a different coax. Better yet, use the
same coax and cut a small chunk off the end, then you don't have to
worry about it. And if you still want a petty reason to avoid the
experiment, try putting up the SWR numbers for a 55 ohm coax in a 50
ohm system. If it's significant, I'll send you a 50 ohm coax as
measured on a recently calibrated impedance bridge.

You have run out of excuses.

<snip more whining and more excuses not to do the experiment>

>> >[snip]
>> >
>> >> When the match is low, the current nodes are
>> >> at 1/4, 3/4, 5/4, etc. wavelengths from the point of mismatch.
>> >
>> >This statement requires that antenna impedance have no reactive
>> >component. There is no guarantee that this will be the case
>>
>> Wrong. My statement is consistant regardless of load reactance. Any
>> reactance of the load will influence the current/voltage phase shift
>> of the reflected power, but will not change the nature of the mismatch
>> (forward power impedance being low or high compared to the load
>> impedance).
>
>Oh, boy! Sparky, you are just plain wrong. And I'm growing weary
>of correcting you. The location of the nodes along a transmission
>line are directly related the phase (i.e. the real to reactive
>relationship) at the point of mismatch.

Time for a quote from the book you lied about:

"Impedance Relationships

You should observe here that the characteristic impedance of the
transmission line cannot be maintained if incident and reflected
signals interact to produce standing waves on the line. You should
observe also that the phase relationships of the incident and
reflected signals are identical at the load and the half-wavelength

points back along the line. So too are the impedances the same at the load and the half-wavelength points along the line. Another relationship you may note is that the Zl/Zo radio of 3:1 yields the maximum voltage and impedance at the half-wavelength points along the line; and that this 3:1 radio is inverted at the odd quarter-wavelength (1/4, 3/4, 5/4, etc.) points along the line, yielding minimum voltages and impedances Zo/Zl of 3:1. Finally, you should note that the Zl/Zo and inverted Zo/Zl relationship is the same ratio as the minimum-to-maximum voltages and currents in the standing-wave pattern along the transmission line."

...whew! Did you get all that?

>> >>It is
>> >> at these points where power measurements are the MOST ACCURATE, not
>> >> the most skewed as I previously stated.
>> >
>> >Not.
>>
>> Now THERE'S a persuasive argument -- "Not".
>
>It is just as persuasive as your statement.

Except that I provided an explanation, and backed it up with a quote. That sure beats your "Not" all to hell.

>> You are ignoring the obvious: the lack of current from the standing
>> wave at the node of the standing wave (a consequent of the time-domain
>> which you deny) will not cause any interference on the power meter's
>> inductive pickup (the function of which you deny). The funny part is
>> that your denial is in partial contradiction to your claim that SWR
>> can be read accurately at any point along the transmission line.
>
>Oh, it does indeed create a problem with the inductive pickup.
>The net current is zero. An inductive pickup detects nothing.
>But you have a problem here, Sparky. My meter still shows forward
>power even at this point where the net current is zero. How is that
>possible? How can a meter that senses current show a reading when
>the current is zero? Hmmm, could it be that the meter is also sensing
>voltage? Could it be that what I say is correct? (should be a
>no-brainer by now)

Again you have confused a funtion 'over' time with a funtion 'of' time. The waves are there, they just cancel 'over' time. If you are reading forward waves, you are not reading the canceling reflected waves, are you? The forward power is still there, and the reflected power is still there. The problem comes when their phase combines to cause... well, for lack of a better term, double-humped waves.

<snip yet more whining and yet more excuses....>

>> Did you miss something really fundamental here? If the characteristic
>> impedance of a transmission line is the signal impedance where the
>> transmission line works to contain the signal, doesn't it stand to
>> reason that if the signal is not that of the characteristic impedance
>> then the transmission line will not contain the signal?
>
>It is not a matter of containment; it is a matter of propagation.

When you are talking coax, characteristic impedance = containment.
That's the whole point of coax.

>The characteristic impedance dictates the voltage to current
>relationship of the signals. Anything different is reflected
>at the interface.

So if I hook house current up at one end, the other end will show zero
voltage and zero current? Even better, if anything other than the
characteristic impedance of the coax is admitted, then how do
transmission line transformers work? You need to do a little bit more
studying on your transmission line theory.

>> After all, how
>> does a transmission line work? Isn't it a distributed balance of
>> inductive and capacitive reactance? What happens when you detune a
>> tank? Doesn't one component dissipate excessive power? Where do you
>> think that power goes? Does it all get converted to heat? Of course
>> not. Some of it is radiated as RF power. Stop being so ignorant.
>
>WTF are you talking about?

Basic transmission line physics. Start with page 501... oops, I
forgot, you lied about having that book. Oh well...

<snip even MORE whining and MORE excuses....>

>> Do
>> the experiment. Actually, I encourage anyone remotely interested in
>> this discussion to do the experiment. See it for yourselves. Then come
>> back here with your explanations and/or excuses.
>
>By the way, I never did get your excuse for totally misrepresenting
>what was in that book that you referenced. You lied about its
>contents to support your claims. I showed this in excruciating
>detail. What's your excuse? Why would anyone need to lie about
>the contents of a reference book?

Why would someone lie about having a book?

I misrepresented nothing. I'm still waiting for proof that you have
the book and then I will prove exactly what I claimed.

So do you still have the book?

I'm not going to waist a lot of time trying to explain it to you, as it is
clear that you aren't interested in hearing the truth, only your own fantasy
of what you want to believe is the truth. In essence, what I was saying is
that at the current time, looking back on the way things were then, it was
there "at my disposal", however I wasn't aware of that fact, at THAT TIME,
because I wasn't aware that it was an amp. Had I known it was an amp, it
would certainly have been "at my disposal."

>

Hey, look what I found:

==========

From: Power House (Power_House@PrivateBox.NET)
Subject: Re: HOW MUCH POWER did you 1st have when starting on CB?
Newsgroups: rec.radio.cb
Date: 2002-02-25 07:23:07 PST

I started out with a radio that put out 2-watts.. My fathers...
Although I
had a Texas Star DX-250 at my disposal when needed... So I guess you
could
say that I started out with probably about 150-watts...

PH

==========

So did you arrive at that 150 watt figure by averaging the amount of
time you used the amp with the amount of time you didn't? Or, if you
didn't use the amp at all, why did you state that you ran "about
150-watts..."? You're just too transparent, Mr. House.

"Twistedhed" <twistedhed@webtv.net> wrote in message news:24686-3D2460F5-21@storefull-2318.public.lawson.webtv.net... And you're probably right. I still have email sent by Frank insinuating he was going to hack me/send me viruses. He even bitched about it when he realized I (webtv) was impervious to his impotent ass, claiming "You hide behind what you think is an impentrable wall of ones and zeros. This is my your weakness and my strength." Yea, I vote it came from Frank.

>Twisty you blame kevin and others for lieing<

Oh, yea...it's DEFINITELY Frank.
If those who you refer take issue with being caught in lies....the remedy is quite simple......they should stop lying if they don;t like a light shown on their command performances.

>
  but here your spewing bullshit as usual with no ryhme or reason other than you are enamoured with Frank, Aaron, <

Au contraire. I am merely putting forth what you said.
The meaning is easily interpreted without your late panic and plea-filled excuses..

>
Kevin and the rest and can't get them off of your mind. <

Kevin is slightly ahead of you on the rungs of the ladder of evolution, but is rapidly descending. You may now be permitted to count him as one of your slugs, though. After all, I think he certainly made the cut, don't you......several lies in rapid succession and 17 insults since his original post concerning the enforcement lies. Muenzler now rests comfortably alongside the rest of you lowlives that are afflicted with the strange malady that in order to fool your tiny brains into feeling better about yourselves, you must insult others, usually from the shadows. I expect him to follow suit and resume his alter ego posting as another, as he so demonstrated a fondeness of, on past occasion.

>
Of course he's spewing bullshit -- the line he quoted was in context to his anonymity, it had nothing to do with sending viruses or hacking firewalls. <

.
Sure it didn't. Now reach a bit more while we watch you fritter away attempting to explain what my alleged anonymity has to do with your self-described strengths concerning an impenetrable wall of ones and zeros......the worst venom ever on this board since I have been frequenting it has been traced to Dogie, Frank, and Lelnad. Nothing has changed and it is all there for the pickins' in the archives..from Lelnad's threats of violence (telling me I'm dead, shooting freebanders in the head excites him, etc.) to his threats of having Dogie spam the group anytime he wishes, to Frank's threats of hacking me, posting old satellite pics of my house in a failed but humorous attempt at intimidation, to Dogie's Tourette-induced rants and threats of violence to all who enthusiastically handed him the tools to make an incredible ass out of himself. Yep, I still say it was Frank. If it wasn't, that's what he gets for the redundant bragging and self-stroking of his bruised ego concerning his self-professed prowess as relating to computers, as it means nothing among this group and even less in the overall scheme of things.

>
Randy is the one that has threatened to crash firewalls, and Phil has claimed to be capable of much, much more.<

It's the friendly cber types that are receiving the bullshit. Only the above named have demonstrated obvious anger and hate toward the group on a repeated and regular basis, and the above named have all been exposed and caught playing bullshit games, leaving no doubt as to the lows they have stooped in attempted harassment of members of this board who have the uncanny ability to reduce each of them to fodder with mere words. Phil and Randy appear quite benign next to your spiteful, hateful self.
Yea, It's definitely Frank...he was too quick to reply, and someone else on this group showed how he was answering his own posts through google before the posts would even SHOW on Google..he realized this, albeit a bit too late, and slung a buncha shit about his time being off on his pc. More lies from the source.
Also, the techs he created problems with have all shown errors in his radio related knowledge he laughingly thought was untouchable. They were instrumental in revealing Sparky is full of shit and it was the last straw he could take. It's Frank, alright.

news:24686-3D2460F5-21@storefull-2318.public.lawson.webtv.net... And
you're probably right. I still have email sent by Frank insinuating he
was going to hack me/send me viruses. He even bitched about it when he
realized I (webtv) was impervious to his impotent ass, claiming "You
hide behind what you think is an impentrable wall of ones and zeros.
This is my your weakness and my strength." Yea, I vote it came from
Frank.

>Twisty you blame kevin and others for lieing<

Oh, yea...it's DEFINITELY Frank.
If those who you refer take issue with being caught in lies....the
remedy is quite simple......they should stop lying if they don;t like a
light shown on their command performances.

>
but here your spewing bullshit as usual with no ryhme or reason
other than you are enamoured with Frank, Aaron, <

Au contraire. I am merely putting forth what you said.
The meaning is easily interpreted without your late panic and
plea-filled excuses..

>
Kevin and the rest and can't get them off of your mind. <

Kevin is slightly ahead of you on the rungs of the ladder of evolution,
but is rapidly descending. You may now be permitted to count him as one
of your slugs, though. After all, I think he certainly made the cut,
don't you......several lies in rapid succession and 17 insults since his
original post concerning the enforcement lies. Muenzler now rests
comfortably alongside the rest of you lowlives that are afflicted with
the strange malady that in order to fool your tiny brains into feeling
better about yourselves, you must insult others, usually from the
shadows. I expect him to follow suit and resume his alter ego posting as
another, as he so demonstrated a fondeness of, on past occasion.

>
Of course he's spewing bullshit -- the line he quoted was in context to
his anonymity, it had nothing to do with sending viruses or hacking

firewalls. <

.
Sure it didn't. Now reach a bit more while we watch you fritter away attempting to explain what my alleged anonymity has to do with your self-described strengths concerning an impenetrable wall of ones and zeros......the worst venom ever on this board since I have been frequenting it has been traced to Dogie, Frank, and Lelnad. Nothing has changed and it is all there for the pickins' in the archives..from Lelnad's threats of violence (telling me I'm dead, shooting freebanders in the head excites him, etc.) to his threats of having Dogie spam the group anytime he wishes, to Frank's threats of hacking me, posting old satellite pics of my house in a failed but humorous attempt at intimidation, to Dogie's Tourette-induced rants and threats of violence to all who enthusiastically handed him the tools to make an incredible ass out of himself. Yep, I still say it was Frank. If it wasn't, that's what he gets for the redundant bragging and self-stroking of his bruised ego concerning his self-professed prowess as relating to computers, as it means nothing among this group and even less in the overall scheme of things.

>
Randy is the one that has threatened to crash firewalls, and Phil has claimed to be capable of much, much more.<

It's the friendly cber types that are receiving the bullshit. Only the above named have demonstrated obvious anger and hate toward the group on a repeated and regular basis, and the above named have all been exposed and caught playing bullshit games, leaving no doubt as to the lows they have stooped in attempted harassment of members of this board who have the uncanny ability to reduce each of them to fodder with mere words. Phil and Randy appear quite benign next to your spiteful, hateful self. Yea, It's definitely Frank...he was too quick to reply, and someone else on this group showed how he was answering his own posts through google before the posts would even SHOW on Google..he realized this, albeit a bit too late, and slung a buncha shit about his time being off on his pc.

Oh yeah, you mean when he could spend hours posting to the group, but was too busy to change the dying battery in his PC? And I'm sure he had plenty of time to keep resetting the bios as well, but was still too busy to change the battery! Hell, I guess with all that reconfiguring the bios every time he started his PC, he may have been really busy. Makes perfect sense.

With the untouchable integrity he his so proud of, who would even *think* he would stoop to changing the time intentionally? LMAO!!!!!!!

More lies from the source.
Also, the techs he created problems with have all shown errors in his radio related knowledge he laughingly thought was untouchable. They were instrumental in revealing Sparky is full of shit and it was the last straw he could take. It's Frank, alright.

Subject: Re: WORM_KLEZ.G Virus
Newsgroups: rec.radio.cb:

Hi Dennis.

First of all, the virus sends itself... the person is not to blame and may
not even realise.
Secondly, that type of virus is known for "spoofing" addresses. The virus
takes an address from the infected system address book and places it in the
header.

So tracking the actual infected system is not so easy... check the IP number and see which ISP is being used, that may help.

Brainbuster.

Ummm, the accusations were yours Muenzler, I merely asked you to back
them up and you went to pieces and began acting out.

>
I don't have to provide proof of my claims. <

Of course you don't....unless you want to be believed.

>
I made statements, you called them lies, prove they are lies. That's all
I ask.<

That's pretty funny. The burden of PROVING anything lays with you. YOU
made the claims, and were caught up in the lies concerning "gag orders"
that were never issued, you then back-pedaled fiercely claiming they
were not gag orders at all, but mere requests. The requests are part of
the public record... transcripts as well as case numbers, court jacket
info., judges name, prosecutorial teams name, etc., etc., are all there
for the taking and you have failed to produce ANYTHING of substance at
all, except to insult and cry "PROVE I'm lying." I already did, only you
don't have the intellect to realize it.

> Since you are unwilling to even do this then I guess the conversation
is over.   <

It was over the first time you said "Prove I'm lying."..

Georgie wroted:
>How is he a piss poor example ? <

To begin with, he just recently learned, after much input from others that you both consider rational folks, that not all radio rule breakers are criminals. It took over a year for him to finally accept this. Or the lies he put forth as nothing more than an intimidation factor for his own personal agenda, to lend a false credibility to the myth that cbers are under the gun. Or the imposing of his morals on others. Or his admitted reluctance and dislike toward change. Or his biased actions and angry outbursts. If merely asking one to back up his claims results in the behavior that Kevin exhibited, this is one person that should not be in a positon of authority, no matter how small and trifling. The reasons are mulit-fold, the most obvious being his irrational directives dictated by his personal emotive responses. He has taken an issue and made it personal, attacking the inquirers instead of strengthening and re-enforcing his position. He has demonstrated he has not the know-how to not let his personal feelings cloud his judgement. It is no stretch to hypothesize this Muenzler character would not hesitate to abuse authority given him. I could be incorrect about that last statement, but based on his replies, I think not too many would agree with him being in a position that has a huge margin for abuse and personal redress, based on what he has allowed.

>you re the classic example <

Ahh, there you err.
I am no example, never claimed to be. I am a cber and freebander.
But Muenzler, a ticket holder, claims to be this enforcement dude who demands respect by virtue of his license...I need not elaborate on the ludicrousness of that position, as it is probably the single most greatest achievment he ever made...again, this is based on his stated token esteem he feels is deserving simply by way of licensure.

>of a delusional Cber who has lost his marbles
Your constant blaming saying everyone else is lying is a classic example of the fruedian slip. <

Only it's not everyone else. It's the same tired old dogs that have been getting de-wormed on a regular basis.

>
You lie for a living, and
most conclude everyone else does. <

Cite a single instance. Lelnad tried for years in the archives, realized there was nothing to be found, and took to forging me and posting his own forges. You ain't that pathetic yet, George, but I' m certain you have your capabilities.

>Well
Twisty, kevin is a fine example of a ham he has had a hand in 27 bust and i thank him for helping to clear the airwave. <

Thank him all you want. It doesn't make his lies come to life.

> I don't see where Kevin would have to lie about anything <

I didn't either, but Sparky hit the nail on the head when he said they post in hopes that cbers will fear retaliation,,,even if that retaliation is false or nothing more than propaganda.

>the truth hurts andthats why you want to call him a liar. <

Not even close. I called him a liar because he chose to escalate his original lies with more lies. Like a child that doesn't know when to stop. I didn;'t call him a liar until he went overboard with the "gag order" bullshit. I do agree, the truth does hurt,....look at his ignorant insultive, responses.

>If you can't believe it well it must be a lie huh Twitsy?<

Has nothing to do with what I believe,,,again,,it's not personal, but neither of you appear to be able to distinguish the difference, based on your personal attacks.
It's a lie because (among other things) the cases are NOT in the Texas court system, as he claimed.

>

Your quoting shit that I never said... Did I say ANYWHERE in that quote of your that I "RAN" any power, let alone 150-watts?? NO! I said that I ran "2-watts" ("...radio that put out 2-watts"). Being there was the amp there, a Texas Star 250, now that I know more about the equipment that was there at the time, I'd approximate a possible output of about 150-watts had it been used; that is where I came up with my figures. I know this NOW, now that I know more about the equipment that was around at the time. At the time I didn't know a lot about radio equipment, and knew nothing about linears.

I give up, you people are idiots that read between the lines too much... No point in discussing a subject that you refuse to even listen to...

Read between the lines a little more, see what other Bull shit you can invent...

At least someone here realizes what the hell I'm talking about, instead of
reading between the lines.

I realize, now, that it was at my disposal, however at the time I did not
know what it was, or what it did... Plain and simple. Had I know what it
was, would I have used it? Probably. I was young and more reckless.
Everyone went through that reckless stage in their life. If anybody denies
it, they are a flat out liar...

I have a DX99V with original box and packing material, Galaxy mic, manual, bracket, Cig lighter power cord, etc. Also includes Astatic noise canceling mic. This rig is very loud and clear, was just checked out by local radio shop and dc power plug was replaced (said these are common on Galaxy) radio was tuned and is ready to go. It was only used indoors as base.

Yeah, but the dog pulled this trick on me 3 times. The first two, it recovered fine - on the last, I would have had to use the command interface - no problem, except try and find a book with all the commands! Remember the old DOS manuals? A good two inches thick with all the commands and examples. The new stuff just shows you how to point and click. No one makes decent manuals anymore - just use the help files (this was cute learning Visual Basic with the help files, but at least I can produce usable code now). Then again, maybe the darn dog just doesn't like hammies! ;)

You are right it looked better then it worked but it is the only one that I haven't been able to find on the net. I had 2 brand new ones in 2 months and both were returned to radio shack for refunds because they did not work from day 1. I do remember the 40 Ch. scan and the push button channel selector also the ch changer buttons on the mic.

> Did I say ANYWHERE in that quote of
>your that I "RAN" any power, let alone 150-watts?? NO! I said that I ran
>"2-watts" ("...radio that put out 2-watts").

No you didn't. You said you "started out with ... 2-watts" then after
you mentioned the amp you amended your claim to say you "started out
with ... 150-watts". You used the same wording for both, so why should

anyone believe one but not the other?

> Being there was the amp there,
>a Texas Star 250, now that I know more about the equipment that was there at

There is a vocational high scgool in our county that teaches kids
trades, i,e, plumbing, electrical, building trades. These kids and
classes do projects every year. The projects include building complete
houses that people will live in, they have like a 5 year waiting list
of people wanting the school to build theure houses.

Anyway the point of this, the electrical class instructor called a
friend of mine to his house, my friend is an electrician, because the
electrical instructor din;t know how to put in a lousy 3-way switch.

Yeah buddy I am going to run roight out and have that class wire my
new house sheesh.

Hey Keith, just wondering, are you coming to Texas to assist with the floods in the Hill Country?

While it's not good in the hill country, it worse
down towards San Antonio, Seguin, New Brounfels
(Not spelled correct) I just finished talking to both
cousins, worse down south of the hill country.

Hello
i need a few old tube type base rigs old 23 channels looks not really
all that important.
something like old rybons, Kracos, Lafayette, etc.
I don't want amything expensive. junk some old tube type junkers for a
project i am working on. needs to have chassis and cabinet .
let me know what you have
thanks chris

>>
>I made statements, you called them lies, prove they are lies. That's all
>I ask.<
>
>
>
>
>
>That's pretty funny. The burden of PROVING anything lays with you.

Well, in this country at least (I don't know which on you are in) the burden of proof remains on the accuser. You accused me of being a liar, prove it. I gave you a few callsigns, check them out. You seem to be very good at going to the internet and doing searches, go for it. I never said anything about "gag orders" I said that the court requested that the cases not be discussed, there was never an order.

>YOU made the claims, and were caught up in the lies concerning "gag orders"
>that were never issued, you then back-pedaled fiercely claiming they

>were not gag orders at all, but mere requests.

Yep, just like you said that I claimed to have "personally busted 27 hams." I never made such claims and posted my exact words back into the thread. You quickly changed the conversation. I never said that there were gag orders. Go back and read the thread.

>The requests are part of
>the public record... transcripts as well as case numbers, court jacket
>info., judges name, prosecutorial teams name, etc., etc., are all there
>for the taking and you have failed to produce ANYTHING of substance at
>all, except to insult and cry "PROVE I'm lying." I already did, only you
>don't have the intellect to realize it.

You have proven nothing other than you are a blazing fool that can't hold course in a conversation. When you make accusations of something that I said and I re-post my exact words showing that it is YOU that are lying you quickly change the course of the conversation. Grow up.

>
>> Since you are unwilling to even do this then I guess the conversation
>is over. <
>
>It was over the first time you said "Prove I'm lying."..

That's right, because you can't prove that I am lying, anything else is just you blowing smoke.

>
>>
>>>
>But in the interest of fairness, to a point, here are four callsigns who

>K5UJA, WA5NOP, KC7HPA, N5NLQ <
>
>
>And these mean absolutely nothing in the context of your lies.

Because you are either too lazy or afraid to check them out. Just like you are either too afraid or lazy to check out the Official Observer pages at the ARRL. You made the claims that they don't exist. It's much too easy to just sit back and cry "liar, liar pants on fire." Like I said, you and Mopedaholic are nothing more than two (one) childish characters. No wonder it's called Children's Band.

Landshark, San Antonio and New Braunfels are both in the Hill Country,
Seguin is on the southeastern edge of it. The reason Seguin is flooding is
because the Guadalupe river flows through there after leaving the HC. Canyon
lake is also on the Guadalupe, and that's where the dam has overflowed.
Another Corps of Engineers shortcoming in design. They probably share
offices and personnel with the FCC!

LOL! but not for the people, just the offices
comment. Thanks for correcting me, but I always
thought that those spots were just outside of that,
```

but hey, your there, I only visit twice a year.
Yeah, that river runs right through his back yard
(the back 70, literally!) He said his shooting range is
under about 5 feet of water, but about 40 feet away
from cresting.
Other cousin lives off of Spicewood springs in
Austin, his little stream he crosses is running about
6 to 8 feet, so he's not a happy camper either.

Jeebus H. Quisp! Who the heck cares what proof there is? If Kevin chooses to bust a bunch of radio idiots, so be it. It's about time somebody busts the people interfering on radios and television sets "TEN FOUR BIG BUDDY "BEEP". I will side with anybody 100% that chooses to "bust" any "radio problems", be it C.B. or amateur radio. If a person disobeys the laws, hehe, perhaps they deserve to be "busted". Maybe not, but that's just MY opinion.

Don't start stereotyping because of a few bad apples. That's how the whole ham-CBer rift got started. There are good and bad people in both camps, and there are even some in both. It's those vagrants and scavengers that hang out between the two that you should be concerned with. They are the ones that infiltrate the camps and start trouble just to take the heat off of them.

Landshark, don't let it get out that we have nice places here in Texas. Next thing you know, people from Washington state will want to move here!

BTW, have you done any tubing in New Braunfels? That's a blast, and lots of sights to see on the river. I haven't checked the river flow today, but I'm sure the gates are open full tilt, which is somewhere in the 10k cubic foot per second range. At that rate, they do have trips on the river, but only guided ones, as the rapids rival anything you will find anywhere in the world. I've been there and seen it in full flood, and it's not a lazy little river anymore, it's a raging beast!

> You think they would be smart enough to get a virus scanner.

With all the new viruses and trojan horses that are being released, any virus scanner needs to be updated at least daily to catch most of the new variants. And you will never catch them all, since it takes the people who produce the detection software a short time to develop the data needed to block the viruses - and even longer to develop fixes.

100 ft deep? That's not a valley, that's a drainage ditch!

If everyone you want to talk to lives in the valley, then a 200 ft
tower might be overkill. OTOH, a ground-mounted antenna on the top of
a hill might make the lobes too steep to make any local contacts. I
would do it the other way around -- use the tower on the hill and
ground-mount the pole in the valley.

Actually, if they do away with the code requirement, it may be the CB band that goes away. The written is easy to pass, it is just getting your code speed up slightly that takes any real work.

Maybe they could even make the Tech license test free (since it is now the "entry level" class). Just think - over 5-10 years, you could force all the CBers into the Amateur Radio Service. The FCC could then levy large fines to anyone operating above 12 meters but below 10 meters - that were not government stations.

Unfortunately, there are a lot of hams that look the other way when it comes to a fellow ham illegally transmitting on the CB frequencies.

Just like there are a lot of CBers who promote illegally operating on the ham frequencies.

Hi,
pin1 - shield, mic ground
pin 2 - mic audio, central wire of mic-coaxial
pin 3 - PTT, connected to pin 1 when transmit
pin 4 - maybe not connected in this model
In cause of failure of original mic PTT you may use an ordinary on/off
switch connected between pin 1 and pin 3.
Mail me if any problems occure. I know these (and similar) transceivers very
good.
Best regards for all
Chris,
Poland

Hi,
In CB there are the same rules as in ham radio. But in CB shop is much much
MORE easy to sell anything. If the equipment shines enough - it`s very good
!!!. Good antenna IS NOT the same as nice antenna. Good performance
antenna MUST BE LONG - 6ft at least.
If you see : "Excellent !!! 6 dB Gain !!!" - it`s an ordinary LIE !!!
It`s only a commercial trick.
Let me know,if you are interested more.
Best regards
Chris

1. The test should never be free. Nothing is free because it takes time and material, so somebody has to pay. Might as well be the guy asking for the service. 7-11 isn't going to give away their products for very long and keep the doors open. Besides, if $10 is a real obstacle to someone using the radio, they can't afford the radio, anyway.
2. Most amateurs who gain higher licenses start these days as a no-code tech, learn the code at the current dumbed-down rate, and then take a general written test. If the CB group wanted to get legal access to the spectrum they would probably be following the same course, which means a lot of new technicians. There's not been a surge there, so it isn't happening.
3. A prime reason there are a lot of CB users who stay away from licensing is that they are concerned about the government control thing. You know, stay anonymous. Don't let anyone license anything--guns, cars, radios, anything.
4. There is always going to be a difference between people who are willing to work within the rules, study, learn and progress in the knowledge versus those who want something for nothing and aren't interested in anything more. I know a LOT of technician hams who got the license just so they could call home to the wife and find out if they need to get a gallon of milk on their way home. You know--the shack on the belt guys. These are the typical CBers who migrated over. All they want to do is communicate locally with someone they know on a clear frequency. DX is of no interest, and they don't want to know how the radio works, nor how to improve their signal. Therein lies the rub between the new no-coders and the traditional ham who is stereotyped as the inventor type.

Hmmmm.....Maybe they rewired a building near here!

There was a local restaurant closed down. Family retired after about 50 years. This was the Son. I'm not sure how many years his Father had it, but I know it was many as he started it as a young man and was at least 75 when he retired.....

The building itself was an old train station. Never touched except for some paint, a phone and equipment as needed. The last phone in there was a 60s style. The coolers - all but one, were 50s to early 60s vintage. There was even a 60's model TV. The place closed in the mid 90s. I mean you could see some traces of the "older" wiring and such.

Another person bought it. He chose to "rewire" it. Supposedly it was done "professionally". But, yeah you guessed it....a few weeks later, it burned to the ground. Cause? Electrical wiring.....go figure. I wonder what class he/they missed to cause that?

This unit is not available in the U.S. under that name. I suspect it is Solarcon because they like to name things after old cinema. It may be known as an Imax, A99, or Antron 99 here. You might want to check US distributors for pictures to see what it is called here.

If it is of that type, it will be a decent DX antenna, hard on your neighbors because it does radiate downward. Any vertical works better near the sea however sea air will corrode and rust things.

470. Galaxy-Ranger Service Manual--2nd Edition

Newsgroup: rec.radio.cb
Date: 2002-07-06 19:34:08 UTC
From: Lou Franklin <lou@cbcintl.com>
Message-ID: <fiheiuspaokc3dhdshbgdnnkkeho6o5kf6@4ax.com>
Source record: 129499

We've just completed an update of our very popular Galaxy-Ranger service manual. The new SECOND EDITION covers the EPT3600, EPT0696, and EPT6900 chassis types. That includes MANY brands such as Galaxy, Ranger/RCI, Superstar, Texas Ranger, Connex, etc. Complete details on this specific book are on our Web site at:

www.cbcintl.com/galaxy.htm

Check out all our CB specialty books, plans, kits, & high-performance accessories at:

www.cbcintl.com

* *
In case you didn't already know...

Who are we? Since 1976 we've been the leading supplier of books, plans, and kits just for CB radio. Do-it-yourself repairs and modifications, 10-Meter Ham conversions, amplifiers, FM converters, bleedover filters, adding new frequencies, etc. Secrets of how to increase your power, range, and privacy.

If you have any problems getting the files, or need additional details on what we offer, please email us directly at:

Lou,

I thought I'd ask a question. I wonder if you could you answer me honestly without the smokescreen of phony disclaimers. Your business targets CB'ers who fiddle around with the insides of their radios and outboard amplifiers. The results of their fiddling have all kinds of consequences, from splatter and overmod -- to out of band operation. Don't you have any conscience? You are aware that the export radios (which you distribute instructions for enabling) have begun showing up on the ham bands this year. Does that matter to you?

-Aaron-

Export radios have been around since the early 80's.

I did not say cost free - I said test free for the Tech license. It would
then be a no code, no written license.

That would supply the rational the FCC would need to move the CBers to
the Tech ham frequencies over a period of time.

475. CB Trucks and the FCC

Newsgroup: rec.radio.cb
Date: 2002-07-06 21:41:47 UTC
From: Kenneth <pwrguy@intergrafix.net>
Message-ID: <uiep0nr5n4u3c2@corp.supernews.com>
Source record: 129504

As a truck driver I can't help but laugh at the FCC wannabie agents. Out of perhaps 2 million trucks 90 percent have non-standard(read illigal) rigs. The other 10 percent will get one within a year.
Aparently truck drivers decided NOT to wait for the FCC to get of there ass and allocate new channels and more power. Most truck stops have a cb shop and I would pay money to see some dweeb walk in and tell them it's against the law. Will the FCC ever do anything about it? No Never Not in a million years.
Look at the bust's the FCC have made. Something like 8 busts over a 3 year period and half of them are Ham's. The rest are base stations that ignored repeated warnings.
Truckers will continue to buy Galaxy's and Superstar's and linier's and use them and people will sell them.
Voobner and his ilk will continue to annoy the fcc post msgs here while worring that someone somewhere might transmit more then 4 watts and generaly make an ass of himself. Frankly I fell sorry for him. If he has a liscense it brings him zero enjoyment. Everyday I use my superstar as a tool and have fun contacting people all over the US. Voobner meanwhile worries and scans the internet for someone to point his finger at and say"your the bad guy"
Buy the way three truck stops I have seen sell full blown ICOM Ham rigs and one even had a marine radio. Five guys I know wanted Ham rigs and just went out and bought them and installed them and use them and they tell me most Hams talk to them and only a few mention that the should get a liscense.
Baba Boeey! WASSUPP Can you hear me now? Good!
Sincerely
Ken

Don't get you panties in a wad, Aaronious!
Or should we say, Anal Aaron!
The information you refer to is available from a multitude of sources. As for the radio's showing up on the Ham bands, I'll bet alot of the Hams are using them...on the Ham bands and Elsewhere!

While I am involved with a project that takes pictures and makes a digital record of the driver, rig, and everything else needed to pin his ears back, I do have a minor soft spot in my head for truckers and so far we have merely jacked up the employer for it. I have long advocated a trucker band, an idea I know goes back at least 30 years. That you have taken matters in your own hands is reprehensible but understandable to a degree.

There are several trucking companies that were warned about this from the FCC including most of the major haulers and several states are thinking about using the new Federal statute allowing frequency enforcement to separate you from the contents of your wallet and some have expressed interest in the gear we use to nail you. We know for sure that an old book title, Never Trust a Naked Bus Driver, is fact. Your problem not mine. This I am sure of from the reaction of the majors to getting a picture.

When you cross the 28 line, it is not the FCC per se that should bother you. Ten meters is a treaty band and when the Commission gets bitches from the rest of the world, a few crucifixions will be performed which is what undermanned enforcement operations tend to do, witness Seattle and the LAPD. If you can't raise the ante with frequency of arrest, do it with severity.

Next time someone mentions the hams that talk with him, ask how many contacts just sort of come to an abrupt end. The reason I mention this is that this is the proper procedure under Amateur rules when a 'slim' is encountered; we cannot even suggest he get licensed. But some guys are either unaware or hot for a 10-10 number and in the 28.3 - 28.5 segment there are a lot of rookies.

I am assuming that the ham band in question is ten meters because a screwdriver is just a bit big for a mirror. As the sunspot numbers decline and they are dropping like a stone at the moment, the DX will go away and for a few years you can have it to yourself.

As one who is old enough to have been on CB before it was CB, I am going to take some heat from the forces of righteousness here for being semi-nice. Please, if you are going to take the position that rules were meant to be tactfully disregarded, remember the key word is tactfully. And the way these truck stops rape you guys over radio gear shouldn't happen to a stuffed goat.

And yes, the anti's around here remind me as well of the Anti-Saloon League and WCTU:

In good oompah waltz time:

We never eat fruitcake 'cause fruitcake has rum,
And one tiny slice turns a man to a bum

Oh can you imagine the pitiful plight
Of a man eating fruitcake until he gets tight.

Away, Away with rum, by gum,
Rum by gum, rum by gum
Away, Away with rum, by gum
It's the song of the Temperance Union.

Dick N&#65533;BK

Bill, I'm not sure I'm ready to pass judgement on your suggestion. My personal thought is if you don't spend anything (either dollars or time and effort), you have nothing invested and nothing to lose - therefore anything goes. On the other hand, identification is required and eventually if you don't, problems occur. If you do, you don't want to go too far overboard. The whole thing boils down to the fact that the spectrum (from nearly dc to light) is a shared resource. Obviously, folks want their television, some want a private conversation on their telephone - be it conventional or cellular - and still others want to listen in. Somewhere, there has to be some compromise. Where that is going to fall, I sure as heck don't know. Yep, I don't want to be regulated, but I don't want you listening in whilst I talk with my girlfriend. Any input on this mess would sure be appreciated!

I use McAfee, my dad has Norton, both more or less by default. Both are good at detecting it. As far as cleaning it, I would suggest you look it up in the virus library at http://mcafee-at-home.com to see their cleaning procedure. This Klez G worm is a bitchkitty.

Thanks. I just picked up a machine that the owner claims has a virus.
The F-Prot I just ran on it found something. The line was:
"C:\Mookie\Attach.exe is a joke file". Now I'm searching to find out
what it is.

Worst case if norton don't fit on a floppy, is to burn a CD. I'm not
attaching this machine to my network until I'm sure it's clean. Then
I copy all the data off, make backups onto CD's, nuke it and reload
a fresh, clean OS on it. This machine is a software kludge from hell!

LOL, I love how he makes up very specific "facts" (i.e. 90%, 3 truck stops, 5 guys) as he goes along.

The Klez is officially w32/klez and has variants out the waz. Just put
'Contains Klez' into the Mcafee search tool and 24 versions come up.
Unfortunately one of its cutes is to attack anti-virus tool files.

It was not a serious suggestion. But it is probably the only way that the
FCC would have the chance to move CB to above 30 MHz. Even then it would
be a long hard effort.

Of course, it wouldn't have to be a ham band. Two or three MHz anywhere
above 30 MHz would suffice. Allow VFO usage and possibly more power and
less restrictive antenna heights or allowed ranges of communication.

Probably a good thing right now Keith. Not that you aren't needed, but it is hot as hell here now! And like Scott said, it's probably just the beginning, so I'm sure you'll get your turn. Hope not though. Hurricane season generally cranks up mid August, so we're not out of the woods yet.

Take care,
-Randy

I don't know how it works in the US but in Canada the IC boys setup at scales and during the mass safety checks on places like the Trans-Canada Highway. They go through your car, truck or van with a fine tooth comb while Transport Canada does a safety inspection and the RCMP runs all of your paper work. Also fish and game look for Poached wildlife and illegal fire arms. I went through one in a taxi cab one time and was tied up for 1/2 hr while everything was checked including the radio for extra mods. While I was in there 2 truckers were busted for outlaw radios, issued fines and radios seized. Boy you should of heard them scream.

That is virtually nothing. A very good friend of mine had a friend who went to Canada and caught more fish than he should have. He hid the fish in the boat. He got caught - they took the fish, the boat, and the truck. He walked over the bridge to the US! What is going to cause problems is not the FCC per se, it will be the screaming from other countries that will force the FCC to do its' job.

It seems many CBers are VERY interested in the area of "is he/she or is he/she not a licensed Ham." Just check out the look up counter for me on QRZ. Posting the call sign answers that question right up front. Whether that has anything to do with the discussion at hand is up to the posters themselves, and silences the those who claim you were trying to hide the fact, thus having one less non-issue to argue over.

From: justwhatineedmorespam@nothanks.con (Colonel Chim Chim)
> Jeebus H. Quisp! Who the heck cares what proof
there is? <

Kevin does, otherwise he wouldn't keep crying for proof that he's lying.
It's real simple,,,check the Texas court system that he said all these
cbers were caught up in. They don't exist.

>If Kevin chooses to bust a bunch of radio idiots, so be it. It's about
time somebody busts the people interfering on radios and television
sets<

No problem with that.

> "TEN FOUR BIG BUDDY "BEEP". I will side with anybody 100% that chooses
to "bust" any "radio problems", be it C.B. or amateur radio. If a person
disobeys the laws, hehe, perhaps they deserve to be "busted". Maybe not,
but that's just MY opinion.<

If a person disobeys the laws, "hehe?"
I agree, some fo the laws are indeed a laughing matter. I don;t have a
problem with Kevin lending his self to catching radio villains, or
anyone for that matter. Liars are another story. If one lies, nothing
about them can be considered even remotely credible. Kevin made the
claims, I asked for something, anything for him to back them up, as I
knew before he even posted of the 9 cbers that were involved in state
court systems last year across the country, so if I am guilty of
anything, it is setting him up like a bowling pin to reply. And he did.
With more lies.
Kevin is full of shit.

Bill, I understand what you are saying. They have opened up MURS (2 watts, virtually no antenna restriction), but a problem remains. Someone running a KW in California could be heard (under the proper conditions) in Hawaii. I think (I could be wrong, of course) that the VHF business band is within 5 years of being trashed. Scatter will allow a moderately powered station with a good beam to communicate for well over 100 miles - even with no line of sight. Possibly 250 miles or more, depending upon power, antenna gain, height, and mode. Then folks will discover 'capture effect'. With some radios available which run a number of channels (some of which are MURS), and powering down for MURS, it won't take long for people to use the other channels (plus an amp) and wreck havoc upon the business band. There IS a reason for Motorola and Radio Shack to change their positions on MURS. My but feeling is that the businesses are going to remember who put this proposal on the table to make more money. Gut feeling is 900 MHz. Power will still allow extended range under favorable conditions, but, for the most part, folks can enjoy reasonable interference range for 10 to 15 miles with a decent antenna.

wb5rue@qsl.net (Kevin Muenzler, WB5RUE)
>Yeah, right....turn the tables to avoid having to prove your
accusations. <

Ummm, the accusations were yours Muenzler, I merely asked you to back
them up and you went to pieces and began acting out.

>What accusations did I make? <

You made many, including accusing me of being several insultive names,
because you can''t effectively have a friendly discussion or
disagreement. You turned rabid when I merely asked for some substance of
your claims. AFTER you insulted and added more lies in a failed attempt
at covering your original lie, I called you a liar, but anyone can now
contact the great state of Texas and find that out for themself.

>You are the one making the accusations. I made claims, you made
accusations of me being a liar because you don't believe them. <

Because they don't exist, Muenzler. You realized you were in over your
head when you mentioned the "request" bullshit from some judge. Judges
don't request Jack, Muenzler, they order it, especially when it comes to
not leaking something or another. What else is absolutely hilarious,
that I never even mentioned yet, is that there would be no reason
whatsoever for a judge to issue a ban on talkiing about a cb case, or
even a request, concerning ALL these hammies. None are in the court
system of Texas. Not a mystery.

>I don't have to provide proof of my claims. <

Of course you don't....unless you want to be believed.

>I really don't care if you believe me or not.
I made statements, you called them lies, prove they are lies. That's all
I ask.<

That's pretty funny. The burden of PROVING anything lays with you.

>Well, in this country at least (I don't know which on you are in) the
burden of proof remains on the accuser. You accused me of being a liar,
prove it.<

Yea? Well get this, on usenet, the burden of proof lays with the one who
makes the claims....but anyone who wishes to search, or better yet, make
the calls, will find exactly what I said......none of it happened the

way you claimed. Get over it.

> I gave you a few callsigns, check them out. You seem to be very good at going to the internet and doing searches, go for it. I never said anything about "gag orders" I said that the court requested that the cases not be discussed, there was never an order. <

See above.

YOU made the claims, and were caught up in the lies concerning "gag orders" that were never issued, you then back-pedaled fiercely claiming they were not gag orders at all, but mere requests.

>Yep, just like you said that I claimed to have "personally busted 27 hams." I never made such claims and posted my exact words back into the thread. You quickly changed the conversation. I never said that there were gag orders. Go back and read the thread.

The requests are part of
the public record... transcripts as well as case numbers, court jacket info., judges name, prosecutorial teams name, etc., etc., are all there for the taking and you have failed to produce ANYTHING of substance at all, except to insult and cry "PROVE I'm lying." I already did, only you don't have the intellect to realize it.
>You have proven nothing other than you are a blazing fool that can't hold course in a conversation.<

Oh, now that's really rich.
It was you Muenzler, not I that exhibied the deficit in the art of effective communication by hurling insults. Claimig otherwise doesn't make it any more true that your previous lies.

> When you make accusations of something that I said and I re-post my exact words showing that it is YOU that are lying you quickly change the course of the conversation. Grow up.<

All this because I merely asked you to back up what you said. You haven't.

>Since you are unwilling to even do this then I guess the conversation is over. <

It was over the first time you said "Prove I'm lying."..

>That's right, because you can't prove that I am lying, <

I had a hand in it, the great state of Texas proved you were lying.

>anything else is just you blowing smoke.
But in the interest of fairness, to a point, here are four callsigns who are no longer allocated because of convictions and/or license revocations in the past two years.
K5UJA, WA5NOP, KC7HPA, N5NLQ <

And these mean absolutely nothing in the context of your lies.

>Because you are either too lazy or afraid to check them out. Just like you are either too afraid or lazy to check out the Official Observer pages at the ARRL. You made the claims that they don't exist.<

No, re-read exactly what I typed.
You want to play semantics? It was only AFTER I claimed there was NO SUCH THING AS AN OFFICAL FCC OBSERVER that you dropped that tag like a hot potato. Incorrectly referring to yourself as an FCC observer was intentionally misleading and deceitful.

> It's much too easy to just sit back and cry "liar, liar pants on fire." Like I said, you and Mopedaholic are nothing more than two (one) childish characters. No wonder it's called Children's Band.
Kevin, WB5RUE<

Well, this group of children buried your lies.

Dipped if I know. I am using AVG and it is free and updates on its own or I can force it to update. It works. I received an e-mail from a close friend this week and it popped up and showed me what the virus was which was attached to the file. Of course, Zone Alarm has popped up before it in the past with alerts to a virus. I am still trying to gather my wits to put Linux back on the PC. I definately do NOT trust anything from the internet.

THAT is what the truckers don't understand. Often, they are full of the "I
drive BIG,
so therefore I AM". The complaints are already coming in, there are MORE
than
the 8 busts/warnings Kenneth cited, and their illegal intrusions will NOT go
unpunished.
One of the ideas that OOIDA fought tooth and nail to prevent was the very
truck in-
spections that Transport Canada did in the above post. That very thing
could come
back to bite US truckers in the butt. If anyone thinks that truckers are
bigger, badder,
and more deserving of radio spectrum than others in this country, you are
simply dense.
They already have the same "extra channels" that every other user has: MURS
and
FRS. Radio usage is a P R I V I L E G E---not a right--granted by the
government.
Like the FCC or not, their duties and powers are granted by Congress, they
have been
challenged more than once, and without them, your covetous regard for
frequencies and bands would only work against you and everybody else.
Apparently, you only see
with tunnel vision in regard to the concept of Spectrum Management, and if
your dream of unfettered access to more and more frequencies were to come
true, you and
all your friends, not to mention all users, would be plagued by such
hopeless interfer-ence that no amount of "leenyars" would help except
maybe to fry the brains of those
who use them, thus abating to some degree their useless presence on the

airwaves.

Do you really want to bet on that? I go to truck stops and verify sales of
illegal equip-
ment without ever saying a word. What's the point? I just locate, verify,
and report what I see. There are many more than 8 warnings/busts for this
very thing.

Buy 'em, use them on the 40 channels. You aren't likely to run into trouble
(yet).
Go up onto the ham bands, you're going to have trouble, guaranteed. What
you do
on the 40, I have nothing to do with. Go into my "pasture", and you're
likely to get
gored.

> > Baba Boeey! WASSUPP Can you hear me now? Good

Yes, we hear you, and the Feds are hearing complaints from people, domestic
and
otherwise about interference caused by lawless and rogue operators that want
to
take theirs and others' as well. When they amend the "Local Enforcement"
law to
include inspections of trucks, are you going to scream and moan about how,
"Ah
di'n know they 'uz gonna do tha-ut". Ah got mah 'rahts'. Pity you DON'T
know that
the battle is just beginning. I happen to know that there are letters
circulating in Con-
gress and on the desks of members of the House Sub-Committee on
Communications
complaining about truckers, and others, that think that they are going to
take over.
I'm betting it WILL be dealt with.

Oh, BTW, there AREN'T anymore CB channels to allocate--most of that
"freeband"
area belongs to the military and US government and doesn't even fall under
FCC's
jurisdiction. THAT is why they haven't "made more of them thar CB channels,
thar".It doesn't matter if they NEVER use them, they still OWN them.

You might want to subscribe to the concept of NEVER SAY NEVER. Instead of
getting more this, more that, you could end up losing what you have. Not
imminent,
but it *COULD* be argued that 27 MHZ CB, in light of modern technology, has
outlived its usefulness, and also is creating more problems than it solves.
Would you
want to find yourself on a VHF or UHF, low power, non-skip band? That is
NOT
impossible. Go ahead and scoff. The fact now is, that among the powerful
and in-fluential, CB is considered an anachronism-associated with lower
strata of society.
Not nice, but true. To them, the picture of a 1950s trailer with a
ground-plane, a
ratty "Shiv-o-lay" pickup with a long whip personifies CB radio. So be
careful
what you brag about or hope for--the end result may be exactly the opposite

of what you want. Lawlessness and mob rule doesn't achieve the correct result: rather, restrict-
ions and removal of the very thing you seem to enjoy so much.

I believe the part about the boat. We had 2 fishing boats that were using modified ham gear on VHF and didn't realize that they were on the input to the police repeter. I listened to them all day on my scanner and then they had a very nice welcoming party when they got to port. 2 nice professional fishing boats with all the gear became the property of the Canadian federal government. The trick is that if they want to get the boats back they have to take the government to court at their cost. That was problem the same with your friend. If not the stuff goes up for auction and the government gets the cash. I work as a shipper and have had trucks seized for the same offences on the way to my warehouse. We do get the trailer and the load but the truck gets locked up. They all could have BSed their way out of it if they would of had a ham license but no too lazy. I have also heard about privet cars and trucks getting seized at the road checks.

In addition to "Rabbit Ears"

New York Taxis learned the hard way not to encroach onto 10 Meters!
NEWS
Report No. CI 98-6 COMPLIANCE & INFORMATION ACTION April 27, 1998

FCC INSPECTION PROGRAM REDUCES NUMBER OF NEW YORK CITY TAXI
CABS FOUND OPERATING CB RADIOS ON ILLEGAL CHANNELS

The FCC Compliance and Information Bureau announced today that an inspection program of New York City taxicabs has reduced the number of cab drivers illegally using
CB radios on amateur radio band frequencies.

Following receipt of numerous complaints that New York City taxis were interfering
with amateur "ham radio" bands, (10 Meter Radio Band), agents from the Bureau's New
York field office began an investigation in early January, and verified that cab drivers were
not using CB radios on designated CB channels, but were using amateur radio frequencies.

In cooperation with the New York City Taxi and Limousine Commission (TLC) which governs all taxi cabs, FCC investigators began to make periodic, random inspections
of cab drivers' CB radios at the TLC taxi inspection facility in Woodside, NY, where all
New York City taxi cabs undergo an inspection once every four months. At first, FCC
investigators found that nearly every taxi CB radio inspected had been modified to operate
out of the legal CB band and in the amateur radio band. Verbal warnings were issued to all
those found to be in violation and a warning letter was sent to their homes.

After 2-3 months of random FCC inspections, evidence of CB frequency violations
began decreasing dramatically. Current inspections indicate that only one out of every 10
New York cabs operating CB radios are transmitting on improper channels. The FCC
reported that amateur radio operators have stated that taxi cab operation intrusions into the
amateur 10 meter radio band appear to have disappeared.

In addition to the FCC inspections, the TLC conducted a mailout campaign to all taxi
owners advising them of FCC regulations related to CB operations. During the inspections
the FCC agents explained to each cab driver why they were operating illegally, how they
were interfering with amateur radio users, and what the proper frequency is for legal CB
channel transmissions. Since the beginning of the inspection program, the CB radios in
approximately 100 taxis were checked. TLC rules permit taxi drivers to have CB radios in
their cabs as long as they meet FCC regulations.
- FCC -

Think inspections can't happen to trucks? Once taxis, then truckers who bring it
on themselves

Enforcement that you say isn't happening:

Before the
Federal Communications Commission
Washington, D.C. 20554

In the Matter of)
)
THE TWO WAY SHOP) File No. EB-99-ST-439
220 Columbia Dr. E.)
Kennewick, Washington 99336) NAL/Acct. No. 915ST0007

FORFEITURE ORDER

Adopted: April 6, 2000 Released: April 7, 2000

By the Chief, Enforcement Bureau:

I. INTRODUCTION

1. In this Forfeiture Order ("Order"), we issue a monetary forfeiture in the amount of seven thousand dollars ($7,000) against the Two Way Shop ("Two Way") for willful and repeated violations of Section 302 of the Communications Act of 1934, as amended ("Act"), and Sections 2.803 and 2.815 of the of the Commission's Rules ("Rules"). These violations involve Two Way 's offer for sale of linear amplifiers capable of operation in the 26.965 to 27.405 MHz frequency band.

2. On July 14, 1999, the Commission's Seattle, Washington, Field Office, issued the referenced Notice of Apparent Liability for Forfeiture ("NAL") for a monetary forfeiture in the amount of seven thousand dollars ($7,000) to Two Way for the noted violations. Patrick Cleppe, owner and operator of Two Way, filed a response to the NAL on July 26, 1999.

II. BACKGROUND

3. Two Way is a consumer electronics dealer in Kennewick, Washington. On March 19, 1999, an FCC agent from the Commission's Seattle Field Office, who was posing as a member of the general public, visited Two Way's place of business at 220 Columbia Drive E., Kennewick, Washington. During that visit, a salesman who the agent believes is named Gary Greenfield offered to sell an external radio frequency power amplifier -- commonly known as a "linear amplifier" -- to the agent. The linear amplifier offered to the agent was capable of operation in the 26.965 to 27.405 MHz frequency band, which is assigned to citizens band radio ("CB") operators. Such a linear amplifier is used to increase the power of CB stations beyond the authorized level. On May 15, 1999, two FCC agents from the Commission's Seattle Field Office, who

were posing as members of the general public, visited Two Way's place of business. On this occasion, a salesman, who the agents believe to be Mr. Cleppe, showed the agents Galaxy XL350 and Palomar 80 linear amplifiers and told the agents that an additional model (Galaxy XL250) was expected to be in stock later that day. The salesman offered to sell these linear amplifiers, which were capable of operation in the 26.965 to 27.405 MHz frequency band, to the agents. Section 302 of the Act, and Sections 2.803 and 2.815 of the Rules prohibit the sale or offer for sale of linear amplifiers that are capable of operation in the 26.965 to 27.405 MHz frequency band. On July 14, 1999, the District Director, Seattle Field Office, issued an NAL to Two Way in the amount of $7,000 for willful and repeated violations of Section 302 of the Act, which prohibits the sale or offer for sale of transmitting equipment not in compliance with the FCC rules, and Sections 2.803 and 2.815 of the Rules, which prohibit the sale or offer for sale of linear amplifiers that are capable of operation in the 26.965 to 27.405 MHz frequency band.

4. On July 26, 1999, the Commission received the response to the NAL, in which Two Way requests the cancellation of the proposed forfeiture. Two Way asserts: that Gary Greenfield was not an employee of Two Way at any time during March 1999; that Two Way is a proprietorship which has never had any employees; that its business records indicate it never purchased any linear amplifiers; and that Two Way collects sales taxes and charges $38.50 for installation and tuning. In addition, Two Way states, if its response does not close this matter, it is making a "motion for Discovery."

III. DISCUSSION

5. As the NAL explicitly states, the forfeiture amount in this case was assessed in accordance with Section 503 of the Act, Section 1.80 of the Rules, and The Commission's Forfeiture Policy Statement and Amendment of Section 1.80 of the Rules to Incorporate the Forfeiture Guidelines, 12 FCC Rcd 17087 (1997), recon. denied, FCC 99-407, (Released Dec. 28, 1999) ("Policy Statement"). In examining Two Way's response, Section 503(b) of the Act requires that the Commission take into account the nature, circumstances, extent and gravity of the violation and, with respect to the violator, the degree of culpability, any history of prior offenses, ability to pay, and other such matters as justice may require.

6. The claims made in Two Way's attack upon the factual basis for the NAL are either immaterial or are directly contradicted by the observations of FCC agents. The agents who went to Two Way's place of business observed linear amplifiers on the premises and received offers to sell linear amplifiers from salespersons believed to be Mr. Greenfield and Mr. Cleppe. This is sufficient to establish the violations alleged in the NAL and contradicts the claim that Two Way did not possess any linear amplifiers. It is not material whether the persons who made the offers to sell were employees of Two Way or proprietors.

7. Discovery is available in Commission adjudication proceedings that have been designated for hearing. Since this case has not been designated for hearing, Two Way's discovery motion is inappropriate.

8. We have examined Two Way's response to the NAL pursuant to the statutory factors above, and in conjunction with the Policy Statement as well. As a result of our review, we conclude that Two Way has failed to justify cancellation or reduction of the proposed forfeiture amount. Therefore, we affirm the forfeiture of seven thousand dollars ($7,000).

IV. ORDERING CLAUSES

9. ACCORDINGLY, IT IS ORDERED that, pursuant to Section 503(b) of the Act, and Sections 0.111, 0.311 and 1.80(f)(4) of the Rules, the Two Way Shop, IS LIABLE FOR A MONETARY FORFEITURE in the amount of seven thousand ($7,000) for the repeated and willful violation of Section 302 of the Act, which prohibits the sale or offer for sale of transmitting equipment not in compliance with the FCC rules, and Sections 2.803 and 2.815 of the Rules, which prohibit the sale or offer for sale of linear amplifiers that are capable of operation in the 26.965 to 27.405 MHz frequency band.

10. Payment of the forfeiture shall be made in the manner provided for in Section 1.80 of the Rules within thirty (30) days of the release of this Order. If the forfeiture is not paid within the specified period, the case may be referred to the Department of Justice for collection pursuant to Section 504(a) of the Act. Payment may be made by credit card through the Commission's Credit and Debt Management Center at (202) 418-1995 or by mailing a check or similar instrument, payable to the order of the "Federal Communications Commission," to the Federal Communications Commission, P.O. Box 73482, Chicago, Illinois 60673-7482. The payment should note the NAL/Acct. No. 915ST0007. Requests for full payment under an installment plan should be sent to: Chief, Credit and Debt Management Center, 445 12th Street, S.W., Washington, D.C. 20554.

11. IT IS FURTHER ORDERED that a copy of this Order shall be sent by certified mail, return receipt requested, to Mr. Patrick Cleppe, the Two Way Shop, 220 Columbia Drive E., Kennewick, Washington 99336.

Here's another of one of those "non-existent"
CB enforcement actions you are so confident of:
BTW, he was operating on the 10 meter band.

RR

****
Before the
Federal Communications Commission
Washington, D.C. 20554

In the Matter of)
)
Joshie Yasin Nakamura, Sr.) File No. EB-99-SF-646
a/k/a Marvin Eugene Barnes)
800 Weeks Street)
East Palo Alto, California 94301) NAL/Acct. No. 200132960002

FORFEITURE ORDER

Adopted: July 3, 2001 Released: July 6, 2001

By the Chief, Enforcement Bureau:

1. In this Forfeiture Order ("Order"), we issue a monetary forfeiture in the amount of
ten thousand dollars ($10,000) against Joshie Yasin Nakamura, Sr. a/k/a Marvin Eugene Barnes for
violating Section 301 of the Communications Act of 1934 ("Act"), as amended. Mr. Nakamura
operated an unlicensed amateur radio station.

2. On April 19, 2001, the District Director of the Enforcement Bureau's San Francisco
Field Office issued a Notice of Apparent Liability ("NAL") for Forfeiture in the amount of ten
thousand dollars to Mr. Nakamura. Mr. Nakamura has not filed a response. Based on the
information before us, we affirm this forfeiture.

3. Accordingly, IT IS ORDERED THAT, pursuant to Section 503(b) of the Act, and
Sections 0.111, 0.311, and 1.80(f)(4) of the Commission's Rules, Joshie Yasin Nakamura, Sr. a/k/a
Marvin Eugene Barnes IS LIABLE FOR A MONETARY FORFEITURE in the amount of
$10,000 for violating Section 301 of the Act by operating an unlicensed amateur radio station.

4. Payment of the forfeiture shall be made in the manner provided for in Section 1.80
of the Commission's Rules, within 30 days of the release of this Order. If the forfeiture is not paid
within the period specified, the case may be referred to the Department of Justice for collection
pursuant to Section 504(a) of the Act. Payment may be made by mailing a check or similar
instrument, payable to the order of the "Federal Communications Commission," to the

Federal Communications Commission
P.O. Box 73482
Chicago, Illinois 60673-7482
NAL/Acct. No. 200132960002

The payment should note NAL/Acct. No. 200132960002 referenced above. Requests for full
payment under an installment plan should be sent to: Chief, Revenue and Receivables Operations
Group, 445 12th Street, S.W., Washington, D.C. 20554.

5. IT IS FURTHER ORDERED that a copy of this Order shall be sent by Certified
Mail Return Receipt Requested to Joshie Yasin Nakamura, Sr. a/k/a Marvin Eugene Barnes at 800
Weeks Street, East Palo Alto, California 94301.

Play it again, Sam:

Before the
Federal Communications Commission
Washington, D.C. 20554

In the Matter of)
)
William L. Leavell) File No. EB-99-ST-010
Seattle, Washington 98818) NAL/Acct. No. 915ST0003

MEMORANDUM OPINION AND ORDER

Adopted: August 7, 2000 Released: August 8, 2000

By the Chief, Enforcement Bureau:

1. In this Memorandum Opinion and Order ("Order"), we deny the Petition for Reconsideration filed on March 8, 2000 by William L. Leavell. Mr. Leavell seeks reconsideration of a Forfeiture Order, in which the Chief, Enforcement Bureau, found Mr. Leavell liable for a monetary forfeiture in the amount of $2,000 for willfully violating Section 303(n) of the Communications Act of 1934, as amended ("Act"), and Section 95.426 of the Commission's Rules ("Rules"). The forfeiture had been assessed for Mr. Leavell's refusal to allow Commission Field Office agents to inspect his Citizens Band radio station. For the reasons discussed below, we affirm the monetary forfeiture in the amount of $2,000.

2. Mr. Leavell raised all of the facts and arguments in his Petition for Reconsideration in his response to the underlying Notice of Apparent Liability for Forfeiture. We reviewed all of those facts and arguments and reduced the proposed forfeiture from $11,000 to $2,000. Thus, we find no basis for modifying the Forfeiture Order.

3. Accordingly, IT IS ORDERED that, pursuant to Section 1.106 of the Rules, William L. Leavell's Petition for Reconsideration IS DENIED.

4. Payment of the forfeiture shall be made in the manner provided for in Section 1.80 of the Rules within thirty (30) days of the release of this Order. If the forfeiture is not paid within the specified period, the case may be referred to the Department of Justice for collection pursuant to Section 504(a) of the Act. Payment may be made by credit card through the Commission's Credit and Debt Management Center at (202) 418-1995 or by

mailing a check or similar instrument, payable to the order of the "Federal Communications Commission," to the Federal Communications Commission, P.O. Box 73482, Chicago, Illinois 60673-7482. The payment should note the NAL/Acct. No. 915ST0003. Requests for full payment under an installment plan should be sent to: Chief, Credit and Debt Management Center, 445 12th Street, S.W., Washington, D.C. 20554.

5. IT IS FURTHER ORDERED that, a copy of this Order shall by sent by certified mail, return receipt requested, to William L. Leavell, 7807 46th Avenue South, Seattle, Washington 98118.

Bill,
Let me understand this. You mean there would be
no fee for taking the Technician class test because
there would be no test of either theory or code. Is
that correct?
Is there anything else you would like to give away
for free, while you're at it? Why not just forget
about the Technician class, lets just make all of the
classes a 'give away' license. Hell, while we're at
it, lets just do away with all the classes of licenses,
make it a 'CB' thing altogether!
Reminds me a whole lot of another 'freebie' thing
called 'welfare'. Boy! That one sure works, doesn't
it? We can call it the "Welfare Radio Service"!
People who want something for nothing are very, very
stupid, and in most cases get what they deserve. Better
be careful what you wish for...
'Doc

Never in a million years? Yeah, right!

TRUCK-N-TRAVEL
32910 East Pearl Street
Coburg, Oregon 97408

RE: Cases EB-01-PO-188

Gentlemen:

This is an official Citation issued pursuant to Section 503(b)(5) of the Communications Act of 1934, as amended (the Act).

On July 23, 2001, agents from the Federal Communications Commission Portland Resident Agent Office observed that the following uncertified Citizens Band (CB) radios were displayed and offered for sale inside TRUCK-N-TRAVEL store located at 32910 East Pearl Street, Coburg, Oregon 97408: 1)
Galaxy DX99V
$439.99

2)
Galaxy DX88
$399.95

3)
Galaxy DX66
$280.00

4)
Galaxy DX33HML
$239.80

5)
Delta Force
$200.00

The Commission's records show that the above CB radios have not been granted an FCC equipment authorization. You are hereby warned that the marketing of those CB radios, including advertising, is a violation of Sections 2.803, and 15.101 of the Commission's Rules and may violate Sections 2.925 and 2.926 of the Commission's Rules. 47 C.F.R. Sections 2.803, 2.925, 2.926 and 15.101. Violation of the Commission's Rules is punishable under Section 503(b)(2)(C) of the Act by a monetary forfeiture of up to $10,000 for each violation per day, up to a maximum of $82,500.

Further investigation revealed that TRUCK-N-TRAVEL is registered with the Oregon Corporations Division as Eugene Trucking Haven, Inc., 800 Willamette Street, Suite 800, Eugene, Oregon 97401.

In accordance with Section 503(b)(5) of the Act, you are being given a period of 14 days from the date you receive this Citation to submit any statements you wish to make concerning the violation. In addition, you may request an interview to discuss this matter in person at the nearest Commission's office.

The Privacy Act of 1974, P.L. 93-579, December 31, 1974, 5 U.S.C. 552a(e)(3) requires that we advise you that the Commission's staff will use all relevant material information before it, including the information disclosed in your reply or interview to determine what, if any, enforcement action is required to ensure current and future rule compliance.

The knowing and willful making of any false statement in reply to this notice is punishable by fine or imprisonment under Title 18, United States Code, Section 1001.

Sincerely,

Binh Nguyen
Resident Agent, Portland (Oregon) CC:
John Anderson, President
Eugene Trucking Haven, Inc.
800 Willamette Street, Suite 800
Eugene, Oregon 97401

Editor's note: The FCC advises that some of the five models of CB transceivers listed above were capable of operating on 10 meters.

Truckers getting warned!
August 10, 2001

Derek's Trucking
3102 Rockspring Church Road
Creedmoor, NC 27522-1964

SUBJECT: Warning Notice--Unlicensed Radio Operation

Dear Sir:

Monitoring information before the Commission shows that you have been operating radio-transmitting equipment without a license on frequencies in the Ten Meter Amateur Radio Service band. Your truck bearing license plate ZB20189 was monitored transmitting on Ten Meter frequencies on July 19, 2001 at 10:30 a.m. on U.S. 1 near Cary, NC, at 2:50 p.m. on Kildaire Farm Road and from 3:00 to 3:30 p.m. from a landfill near the intersection of State Road 55 and Sunset lake Road. Re-transmissions of Nextel two-way communications were also sent from the truck on Ten Meter frequencies.

Please be advised that operation of radio transmitting equipment without a license is a violation of Section 301 of the Communications Act of 1934, as amended, 47 U.S.C. Section 301,and will subject you to fine or imprisonment, as well as an in rem seizure of any non-certified radio transmitting equipment, in cooperation with the United States Attorney for your jurisdiction. Monetary forfeitures normally range from $7,500 to $10,000.

You are requested to contact me at 717-338-2502 to discuss this matter.

Mr. Trip Williams
P. O. Box 725
Travelers Rest, SC 29690

SUBJECT: Warning Notice--Unlicensed Radio Operation

Dear Mr. Williams:

The Commission has information that you have been operating radio-transmitting equipment without a license on frequencies in the Two and Ten Meter Amateur bands and have been using an Amateur call sign not assigned to you..

Please be advised that operation of radio transmitting equipment without a license is a violation of Section 301 of the Communications Act of 1934, as amended, 47 U.S.C. Section 301and will subject you to fine or imprisonment, as well as an in rem seizure of radio transmitting equipment, in cooperation with the United States Attorney for your jurisdiction.

You are requested to contact me at 717-338-2502 to discuss this matter.

SUBJECT: WARNING NOTICE--UNLICENSED RADIO OPERATION

Dear Sir:

Information before the Commission indicates that drivers for your business
have been operating radio-transmitting equipment without a license on the
Ten-Meter Amateur band.

Please be advised that operation of radio transmitting equipment without a
license is a violation of Section 301 of the Communications Act of 1934, as
amended, 47 U.S.C. Section 301, and will subject you to fine or
imprisonment, as well as an in rem seizure of any non-certified radio
transmitting equipment, in cooperation with the United States Attorney for
your jurisdiction. Monetary forfeitures normally range from $7,500 to
$10,000.

You are requested to contact me at 717-338-2502 to discuss this matter.

ROTFLMAO!!!! More non-existent enforcement. <<snicker>>

****

Before the
Federal Communications Commission
Washington, D.C. 20554

In the Matter of) File No.: EB-01-DL-512
)
David Edwin Merrell) NAL/Acct. No.

200132500002
)
Wichita Falls, Texas) FRN 0005-0709-74

FORFEITURE ORDER

Adopted: December 20, 2001 Released: December 26,

2001

By the Chief, Enforcement Bureau:

1. In this Forfeiture Order (``Order''), we issue a monetary forfeiture in the amount of ten thousand dollars ($10,000) against David Edwin Merrell (``Merrell'') for willful violation of Section 301 of the Communications Act of 1934 (``Act''), as amended.1 The noted violation involves Merrell's operation of a radio station on an amateur frequency without a license.

2. On September 10, 2001, the Commission's Dallas, Texas, Office issued a Notice of Apparent Liability for Forfeiture in the amount of $10,000 to Merrell.2 Merrell has not filed a response. Based on the information before us, we affirm the forfeiture.

3. ACCORDINGLY, IT IS ORDERED THAT, pursuant to Section 503(b) of the Act,3 and Sections 0.111, 0.311 and 1.80(f)(4) of the Commission's Rules,4 Merrell IS LIABLE FOR A MONETARY FORFEITURE in the amount of $10,000 for violating Section 301 and of the Act.

4. Payment of the forfeiture shall be made in the manner provided for in Section 1.80 of the Commission's Rules5 within 30 days of the release of this Order. If the forfeiture is not paid within the period specified, the case may be referred to the

Department of Justice for collection pursuant to Section 504(a) of the Act.6 Payment may be made by mailing a check or similar instrument, payable to the order of the ``Federal Communications Commission,'' to the Federal Communications Commission, P.O. Box 73482, Chicago, Illinois 60673-7482. The payment should note ``NAL/Acct. No. 200132980001'' and ``FRN 0005-0709-74,'' referenced above. Requests for full payment under an installment plan should be sent to: Revenue and Receivables Operations Group, 445 12th Street, S.W., Washington, D.C. 20554.7

5. IT IS FURTHER ORDERED that a copy of this Order shall be sent by Certified Mail -- Return Receipt Requested -- to David Edwin Merrell at 704 Ross Avenue, Wichita Falls, Texas 76306.

FEDERAL COMMUNICATIONS COMMISSION

David H. Solomon
Chief, Enforcement Bureau

Federal Communications Commission
Washington, D.C. 20554

In the Matter of)
)
Mr. Jerry Smith) File No. EB-00-PA-414
)
125 Commonwealth Ave.) NAL/Acct. No. 200132400001
Claymont, Delaware)

FORFEITURE ORDER

Adopted: April 18, 2001 Released: April 20, 2001

By the Chief, Enforcement Bureau:

1. In this Forfeiture Order (``Order''), we issue a monetary forfeiture in the amount of thirteen thousand five hundred dollars ($13,500) to Jerry Smith for willful and repeated violations of Sections 95.409(a), 95.410(a) and 95.411(a)(1) of the Commission's Rules (``Rules'').1 The noted violations involve Mr. Smith's operation of a Citizens Band (``CB'') Radio Station with a non-type-accepted transmitter, with a transmitter output power greater than four watts carrier power in the AM (A3) mode, and with an external RF power amplifier.

2. On January 8, 2001, the Commission's Philadelphia, Pennsylvania Field Office issued a Notice of Apparent Liability for Forfeiture (``NAL'') in the amount of thirteen thousand five hundred dollars ($13,500) to Mr. Smith for the noted violations.2 Mr. Smith has not filed a response. Based on the information before us, we affirm this forfeiture.

3. Accordingly, IT IS ORDERED that, pursuant to Section 503(b) of the Communications Act of 1934, as amended (``Act''),3 and Sections 0.111, 0.311 and 1.80(f)(4) of the Rules,4 Jerry Smith IS LIABLE FOR A MONETARY FORFEITURE in the amount of thirteen thousand dollars ($13,500) for operating a CB Radio Station with a non-type-accepted transmitter, with a transmitter output power greater than four watts carrier power in the AM (A3) mode, and with an external RF power amplifier, in willful and repeated violation of Sections 95.409(a), 95.410(a) and 95.411(a)(1) of the Rules.

4. Payment of the forfeiture shall be made in the manner provided for in Section 1.80 of the Rules5 within 30 days of the release of this Order. If the forfeiture is not paid within the period specified, the case may be referred to the Department of Justice for collection pursuant to Section 504(a) of the Act.6 Payment shall be made by mailing a check or similar instrument, payable to the order of the Federal Communications Commission, to the Federal Communications Commission, Forfeiture Collection Section, Finance Branch, P.O. Box 73482, Chicago, Illinois 60673-7482. The payment should note the NAL/Acct. No. referenced above. Requests for full payment under an installment plan should be sent to: Chief, Revenue and Receivables Operations Group, 445 12th Street, S.W., Washington, D.C. 20554.7

5. IT IS FURTHER ORDERED that, a copy of this Order shall be sent by Certified Mail, Return Receipt Requested, to Jerry Smith, 125 Commonwealth Avenue, Claymont, DE 19703.

FEDERAL COMMUNICATIONS COMMISSION

Here's #20 in 3 years, hardly the mere 8 you mentioned.

Federal Communications Commission
Washington, D.C. 20554

In the matter of)
)
James Leger) File Number EB-01-MA-007
Lake Worth, Florida) NAL/Acct. No. 20023260001
) FRN: 0006-9264-48

FORFEITURE ORDER

Adopted: June 25, 2002 Released: June 28,
2002

By the Chief, Enforcement Bureau:

1. In this Forfeiture Order (``Order''), we issue a monetary forfeiture in the amount of ten thousand dollars ($10,000) to James Leger (``Leger'') for willfully and repeatedly violating Section 301 of the Communications Act of 1934, as amended (``Act'').1 The noted violation involves Leger's willful and repeated operation of radio transmitting equipment without a license in violation of Section 301 of the Act.
2. On April 19, 2002, the Commission's Miami, Florida Resident Agent Office issued a $10,000 Notice of Apparent Liability for Forfeiture (``NAL'') to Leger for the noted violation.2 Leger has not filed a response to the NAL. Based on the information before us, we affirm the forfeiture.
3. Accordingly, IT IS ORDERED that, pursuant to Section 503(b) of the Act,3 and Sections 0.111, 0.311 and 1.80(f)(4) of the Commission's Rules (``Rules''),4 James Leger IS LIABLE FOR A MONETARY FORFEITURE in the amount of $10,000 for operation of radio transmitting equipment without a license in willful and repeated violation of Section 301 of the Act.
4. Payment of the forfeiture shall be made in the manner provided for in Section 1.80 of the Rules within 30 days of the release of this Order. If the forfeiture is not paid within the period specified, the case may be referred to the Department of Justice for collection pursuant to Section 504(a) of the Act.5 Payment may be made by mailing a check or similar instrument, payable to the order of the Federal Communications Commission, to the Federal Communications Commission, Forfeiture Collection Section, Finance Branch, P.O. Box 73482, Chicago, Illinois 60673-7482. The payment

should note ``NAL/Acct. No. 20023260001'' and ``FRN: 0006-
9264-48.'' Requests for full payment under an installment
plan should be sent to: Chief, Revenue and Receivables
Operations Group, 445 12th Street, S.W., Washington, D.C.
20554.6
5. IT IS FURTHER ORDERED that a copy of this Order shall be
sent by First Class and Certified Mail Return Receipt
Requested to: James Leger, 131 South F Street, Lake Worth, FL
33463; 230 South Dixie Highway, Lake Worth, FL 33460; 333
Southern Blvd., Suite 305, West Palm Beach, FL 33405; 5750
South Ithaca Circle, Lantana, FL 33463.

Javier Rodriguez.) NAL/Acct. No.

200232680002
)
Boqueron, Puerto Rico) FRN 0006-0437-80

FORFEITURE ORDER

Adopted: March 26, 2002 Released: March 28, 2002

By the Chief, Enforcement Bureau:

I. INTRODUCTION

1. In this Forfeiture Order (``Order''), we issue a monetary forfeiture in the amount of one thousand ($1,000) to Javier Rodriguez (``Rodriguez''), Boqueron, Puerto Rico, for willful violation of Section 301 of the Communications Act of 1934, as amended (``Act''),1 The noted violation involves Rodriguez's unauthorized operation of a CB radio on a frequency for which a license or authorization is required before operation.

2. On November 7, 2001, the Commission's San Juan, Puerto Rico, Resident Agent Office (``San Juan Office'') issued a Notice of Apparent Liability for Forfeiture (``NAL'') to Rodriguez for a forfeiture in the amount of ten thousand dollars ($10,000).2 Rodriguez filed a response3 to the NAL on December 3, 2001.

II. BACKGROUND

3. On April 20, 1999, during an investigation of a complaint about interference to home electronic entertainment equipment, agents from the San Juan Office, using a mobile direction finding vehicle, observed radio transmissions on 26.715 MHz and determined the origin of those signals to be an antenna located in the backyard of a residence belonging to

Mr. Javier Rodriguez (located at Carr 307, Km 6.5 Interior, Boqueron, Puerto Rico). After locating the source of the transmissions, the agents inspected the station at that address and observed that a modified CB radio (a Cobra 148 GTL transceiver) was installed at the station and was connected to a radio frequency power amplifier. During the inspection, the agents determined that Rodriguez was the operator of the station on 26.715 MHz. The frequency 26.715 MHz is in a band allocated exclusively for use by the United States Government. That frequency is not authorized for operation by CB stations and Rodriguez had no authorization to operate on it.4 One of the investigating agents verbally warned Rodriguez during the inspection that unauthorized operation is prohibited by Section 301 of the Act.

4. On October 24, 2001, during an investigation of another complaint about interference to home electronic entertainment equipment, agents from the San Juan Office, using a mobile direction finding vehicle, observed radio transmissions on 26.705 MHz and determined the origin of those signals to again be an antenna located in the backyard of Rodriguez's residence at Carr 307, Km 6.5 Interior, Boqueron, Puerto Rico. After locating the source of the transmissions, the agents inspected the station located at that residence and observed that a modified CB radio (a Cobra 148 GTL transceiver) was installed at the station. During the inspection, the agents determined that Rodriguez was the operator of the station on 26.705 MHz. The frequency 26.705 MHz is in a band allocated exclusively for use by the United States Government. That frequency is not authorized for operation by CB stations and Rodriguez had no authorization to operate on it.

5. On November 7, 2001, the San Juan Office issued a NAL to Rodriguez in the amount of $10,000 for the unlicensed operation observed on October 24, 2001. In his December 3, 2001, response to the NAL, Rodriguez argues that he is financially unable to pay the proposed forfeiture. As support, Rodriguez encloses copies of his Government of Puerto Rico income tax returns for 1998, 1999 and 2000 and documents indicating that he is unemployed. Rodriguez also argues that his violations are mitigated by his remedial action and his status as a first offender.

III. DISCUSSION

6. The forfeiture amount in this case was assessed in accordance with Section 503(b) of the Act,5 Section 1.80 of the Commission's Rules (``Rules''),6 and The Commission's Forfeiture Policy Statement and Amendment of Section 1.80 of the Rules to Incorporate the Forfeiture Guidelines, 12 FCC Rcd 17087 (1997), recon. denied, 15 FCC Rcd 303 (1999) (``Policy

Statement''). Section 503(b) of the Act requires that, in examining Rodriguez's response, the Commission take into account the nature, circumstances, extent and gravity of the violation and, with respect to the violator, the degree of culpability, any history of prior offenses, ability to pay, and other such matters as justice may require.7

7. Section 301 of the Act prohibits radio operation ``except under and in accordance with this Act and with a license in that behalf granted under the provisions of this Act.''

8. Rodriguez does not deny the violations alleged in the NAL. In view of the facts set forth above, we conclude that Rodriguez operated without authorization on 26.705 MHZ on October 24, 2001, in willful violation of Section 301 of the Act.

9. Rodriguez's violation on October 24, 2001, occurred despite a verbal warning from the Commission following his previous unlicensed operation on April 20, 1999. Rodriguez is, therefore, not a ``first offender,'' and is not entitled to a reduction on that basis. Furthermore, remedial action subsequent to notification of a violation will not nullify a forfeiture penalty.8

10. On the basis of the documentation furnished by Rodriguez, we find that a reduction of the forfeiture to $1,000 is appropriate.

11. We have examined Rodriguez's response to the NAL in light of the above statutory factors and the factors set forth in the Policy Statement. Taking all of these factors into account, we conclude that the proper forfeiture amount is $1,000.

IV. ORDERING CLAUSES

12. Accordingly, IT IS ORDERED that, pursuant to Section 503(b) of the Act, and Sections 0.111, 0.311 and 1.80(f)(4) of the Rules,9 Javier Rodriguez IS LIABLE FOR A MONETARY FORFEITURE in the amount of $1,000 for willful violation of the provisions of Sections 301 of the Act.

13. Payment of the forfeiture shall be made in the manner provided for in Section 1.80 of the Rules within 30 days of the release of this Order. If the forfeiture is not paid within the period specified, the case may be referred to the Department of Justice for collection pursuant to Section 504(a) of the Act.10 Payment shall be made by mailing a check or similar instrument, payable to the order of the Federal Communications Commission, to the Federal Communications Commission, P.O. Box 73482, Chicago, Illinois 60673-7482. The

payment should note the NAL/Acct. No. 200232680002, and the FRN No. 0006-0437-80. Requests for full payment under an installment plan should be sent to: Chief, Revenue and Receivables Operations Group, 445 12th Street, S.W., Washington, D.C. 20554.11

14. IT IS FURTHER ORDERED that a copy of this Order shall be sent by Certified Mail Return Receipt Requested to Javier Rodriguez, P.O. Box 661, Boqueron, Puerto Rico 00622.

FEDERAL COMMUNICATIONS COMMISSION

David H. Solomon
Chief, Enforcement Bureau

I have an SBE 4 ampere 13.8 VDC supply for sale.

If you're an SBE collector or if you just want a supply to
power your DC transceiver or a bench supply this should work
well for you.

See some pictures and details at:

http://home.attbi.com/~h1m/SBE/sbe.html
or
SBE 4A Supply

Thanks for looking.

This should prove that they are going after violators in increasing numbers--not just the
token "8". Mr. Hollingsworth promised to do it, I was IN several of his forums, talked
to him in person about the 10 meter intruders, and he assures hams that the 10 meter
line will be defended with the help of its rightful users.

J

Before the
Federal Communications Commission
Washington, D.C. 20554

In the Matter of)
)
James Lee Gaskey) NAL/Acct. No. 915KC0002
5215 N. Pine Street)
Davenport, Iowa 52806)

FORFEITURE ORDER

Adopted: December 29, 1999 Released: December 30, 1999

By the Chief, Enforcement Bureau:

1. In this order, we issue a monetary forfeiture in the amount of $11,000 against James Lee Gaskey for willful violation of Section 301 of the Communications Act of 1934, as amended ("the Act"), 47 U.S.C. § 301. The noted violation involves radio operation without a license.

2. On April 28, 1999, the Commission's Kansas City, Missouri Field Office, pursuant to Section 503(b) of the Act, 47 U.S.C. § 503(b), and Section 1.80 of the Commission's Rules ("the Rules"), 47 C.F.R. § 1.80, issued the referenced Notice of Apparent Liability ("NAL") for a monetary forfeiture in the amount of $11,000 to Mr. Gaskey for the noted violation. A response to the NAL was filed on behalf of Mr. Gaskey by his attorney on June 1, 1999. For the reasons discussed below, we affirm the $11,000 forfeiture amount.

BACKGROUND

3. On August 10, 1998, the Office of the Chairman of the Federal Communications Commission ("FCC") received a complaint concerning interference to home electronic entertainment equipment, allegedly caused by a Citizen's Band ("CB") radio station. The complainant specifically named James Gaskey, of 5215 N. Pine Street, Davenport, Iowa, as the operator of the CB radio station that was causing the interference. The complainant

stated that Mr. Gaskey had CB radio stations in both his home and his pickup truck.

4. On September 14, 1998, in response to the complaint of interference, an FCC agent from the Kansas City Field Office issued a letter to the radio operator at 5215 N. Pine Street, Davenport, Iowa, via certified mail, return receipt requested. The letter informed the operator of the regulations against unlicensed operation of radio equipment and the use of external RF amplifiers and non-type accepted radio equipment in the CB service. The letter also notified him that the penalties for unlicensed operation could include a fine of up to $11,000 and directed the operator to submit a written response to the Kansas City Field Office within 10 days of the receipt of the letter. According to the signed return receipt from the U.S. Postal Service, dated September 16, 1998, Marge Gaskey was the recipient of the warning letter. Although the Kansas City Field Office received the return receipt card from the United States Post Office, the Kansas City Field Office did not receive a written response to the warning letter.

5. On October 5, 1998, the Kansas City Field Office issued a Notice of Violation ("NOV") to Mr. James Gaskey and/or Marge Gaskey for failure to respond to the letter dated September 14, 1998. See 47 C.F.R. § 95.422. On October 15, 1998, the Kansas City Field Office received a response from Mr. Gaskey to the NOV. In his response, Mr. Gaskey denied having an amplifier "in line" at his radio station, and stated that he would shut the base station down until he had time to verify whether the interference problem had ceased.

6. On April 8, 1999, FCC agents from the Kansas City Field Office used direction finding techniques to locate the source of a very strong, wide-banded signal operating on 26.835 MHz. Using an FCC direction finding vehicle, the agents located the source of the transmissions on 26.835 MHz and traced them to 5215 N. Pine Street, Davenport, Iowa. After locating the source of the transmissions, the agents knocked on the door of the residence and were greeted by Mr. Gaskey, who later identified himself with an Iowa driver's license. Mr. Gaskey permitted the FCC agents to enter the residence and inspect the station. During the inspection, Mr. Gaskey admitted that he was operating the station without an authorization. The unlicensed station consisted of a non-certified radio transmitter connected to two external RF power amplifiers, a frequency counter, and an in-line watt meter capable of registering up to 5000 watts. The FCC agents determined that the station operating on 26.835 MHz had an output power of 200 watts.

7. Prior to knocking on the door of the residence, one of the FCC agents had noticed several unusual boxes connected to coaxial cable attached to an antenna in a 1996 Dodge pickup truck, Iowa License plate number 516 HER, which was parked in the driveway of the residence. After permitting the agents to inspect the radio station located inside the residence, Mr. Gaskey allowed the agents to inspect his pickup truck in the driveway. The agents discovered another radio station installed in Mr. Gaskey's truck. The agents found a mobile radio station in the truck, which was capable of operation on

frequencies in the CB radio spectrum, and consisted of a non-type accepted radio transmitter connected to an external RF power amplifier and multimeter. Upon completion of the inspection, the agents issued Mr. Gaskey a warning letter, which informed him of the violation of Section 301 of the Act and ordered him to immediately discontinue the unlicensed operation. At the request of the FCC agents, Mr. Gaskey signed for receipt of the letter.

8. On April 28, 1999, the Kansas City Field Office issued the subject NAL to Mr. Gaskey for his continued unlicensed operation on 26.835 MHz from 5215 N. Pine Street, Davenport, Iowa, in violation of Section 301 of the Act.

9. On June 1, 1999, the FCC received Mr. Gaskey's response to the NAL. The response consisted of an undated document, entitled "Statement of Income, Expenses, Assets & Liabilities For: James Lee Gaskey," a copy of the first page of Mr. Gaskey's 1995, 1996 and 1997 federal income tax returns, and a copy of Mr. Gaskey's letter previously received by the Kansas City Field Office on October 15, 1998. No other information was provided. The response did not refute the violation, nor did it specifically request a rescission or reduction of the monetary forfeiture amount.

DISCUSSION

10. As the NAL explicitly states, the forfeiture amount in this case was assessed in accordance with Section 503 of the Act, Section 1.80 of the Rules, and The Commission's Forfeiture Policy Statement and Amendment of Section 1.80 of the Rules to Incorporate the Forfeiture Guidelines, 12 FCC Rcd 17087 (1997), recon. denied, FCC 99-407, (rel. Dec. 28, 1999) ("Policy Statement"). In examining Mr. Gaskey's response, Section 503(b) of the Act requires that the Commission take into account the nature, circumstances, extent and gravity of the violation and, with respect to the violator, the degree of culpability, any history of prior offenses, ability to pay, and other such matters as justice may require. 47 U.S.C. § 503(b)(2)(D).

11. Section 301 of the Act explicitly prohibits entities from transmitting energy, communications or signals by radio except under and in accordance with the terms of the Act and of a license granted under the provisions of the Act. 47 U.S.C. § 301. In the instant case, Mr. Gaskey admitted during the April 8, 1999 inspection, that he operated a non-certified radio transmitter for his radio station on 26.835 MHz without a valid license. Thus, the violation was willful.

12. Although Mr. Gaskey's response did not explicitly seek rescission or a reduction of the forfeiture amount, we presume his submission of the first page of his 1995, 1996 and 1997 tax returns and the "Statement of Income, etc." were intended to demonstrate his inability to pay the forfeiture. However, the purported statement of income submitted fails to specify the year(s) for which the figures are applicable, and does not indicate how the figures were prepared. Also, the figures in the statement are not supported by any other documentation. With respect to the tax information provided, Mr. Gaskey has supplied incomplete tax returns inasmuch as he has provided only the first page of his tax returns for 1995, 1996 and 1997. Without the

entire tax returns, we are unable to assess the amount of income earned during the relevant years. The NAL clearly states, at footnote two, that a claim of inability to pay should be supported by tax returns or other financial statements prepared under generally acceptable accounting procedures for the most recent three-year period. Undocumented statements of an individual's size and financial condition do not meet the requirement of a particularized showing of financial hardship or inability to pay. See, e.g., Barry A. Stevenson, 12 FCC Rcd 1976, 1977 (1997) (three years of financial statements or other reliable and objective documentation accurately reflecting petitioner's current financial status required to demonstrate inability to pay); Timothy Harold Hoffman, 11 FCC Rcd 17463, 17464 (1996) (individuals have submitted information such as child support payments, tax liens, and garnishments to corroborate debts or liabilities); Macau Traders, Inc., 13 FCC Rcd 228, 233 (1998) (no reduction of forfeiture warranted due to undue financial hardship where violator provided no documentary evidence upon which to evaluate its financial condition or ability to pay). See also 47 C.F.R. § 1.80(f)(3) ("Any showing as to why the forfeiture should be reduced shall include a detailed factual statement and such documentation and affidavits as may be pertinent.").

13. We have examined Mr. Gaskey's response to the NAL pursuant to the statutory factors above, and in conjunction with the Policy Statement as well. As a result of our review, we conclude that Mr. Gaskey has failed to provide a sufficient justification for reducing the forfeiture amount. Therefore, we affirm the forfeiture amount of $11,000.

14. ACCORDINGLY, IT IS ORDERED that, pursuant to Section 503(b) of the Act, and Section 1.80 of the Rules, and the Commission's Policy Statement, James Lee Gaskey IS LIABLE FOR A MONETARY FORFEITURE in the amount of $11,000 for the willful violation of Section 301 of the Act.

15. IT IS FURTHER ORDERED that, pursuant to Section 1.80(f) of the Rules, 47 C.F.R. § 1.80(f), James Lee Gaskey shall, within thirty (30) days of the release of this Forfeiture Order, pay the amount of $11,000 for violation of Section 301 of the Act. Payment of the forfeiture shall be made by check or money order drawn on a U.S. financial institution payable to the Federal Communications Commission. Payment may also be made by credit card with the appropriate documentation. The remittance should be marked "NAL/Acct. No. 915KC0002" and mailed to the following address:

Federal Communications Commission
P.O. Box 73482
Chicago, Illinois 60673-7482

Petitions for reconsideration filed pursuant to Section 1.106 of the Rules, 47 C.F.R. § 1.106, or applications for review filed pursuant to Section 1.115 of the Rules, 47 C.F.R. § 1.115, must be received by the Commission within thirty (30) days of the release of this order at the following address:

Office of the Secretary
Federal Communications Commission
445 12th Street, S.W.
Washington, D.C. 20554
ATTN: Technical & Public Safety Division
Enforcement Bureau

Forfeiture penalties not paid within thirty (30) days will be referred to
the U.S. Attorney for recovery in a civil suit. 47 U.S.C. • 504(a).

16. IT IS FURTHER ORDERED that a copy of this order shall be sent by certified mail, return receipt requested, to James Lee Gaskey, 5215 N. Pine Street, Davenport, Iowa 52806.

Of course! A challenge that couldn't go unanswered. He said only 8 "busts"
in 3 years.
I posted 21(?) just to prove him wrong and illustrate that these kinds of
warnings and
citations are on the increase. More and more of the BIG leenyar, big signal
boys oper-
ating outside the CB band are going to find their wallets lighter if they
don't beware.

Jerry, everyone should note one thing you mentioned - 'spectrum management'. Most of us want to watch television at some point - perhaps local or satellite. Many of us have cell phones. Many also have cordless phones (be they spread-spectrum or the old analog type). We listen to AM or FM radio. This is all possible due to spectrum management. If there was no management of the airwaves, who, in his or her right mind, would build a television station - or radio station?

73 from Rochester, NY
Jim

If there is no other place to move CBers except to the
UHF ham bands, yes.

It was not a serious proposal, as I stated in a response
to someone else. I don't think that any of the ham licenses
should be test free. Matter of fact, I am all in favor of
making them at least as difficult as they were 50 years ago.

> Is there anything else you would like to give away
> for free, while you're at it? Why not just forget
> about the Technician class, lets just make all of the

> make it a 'CB' thing altogether!

With the change to 5 wpm, all the classes are already
close to "gimme". It takes little effort, and no need
to understand theory at all, to pass even the Extra
exam.

> Reminds me a whole lot of another 'freebie' thing

> 'Doc

I wasn't wishing for it. But many hams have wanted to get rid
of the code test for decades. There is a good chance this will
be allowed at WARC. If so, then expect a large influx of people
with even less knowledge of electronics than already infest the
ham bands.

Yep. And most of them you list are not being cited as CBers, but as people illegally operating in the ham bands - some using fake call signs.

It appears that only 3 of the long series of postings you made were CBers. At least, they were the only ones that mentioned the CB service. How about listing the many Hams in this time frame that were cited for transmitting illegally on the CB band - usually for intentional jamming.

And why did you include the complete post to which you were responding in ALL of your responses? I hope you are more polite on the ham bands.

Allen,
EEI isn't around any more. They got their butt in
a crack with the FCC and to get out of it played some
corporate games. EEI was 'bought out' by 'Megatronics'.
Same people running it, same inventory, etc. But the
entity of 'EEI' is now dead. To further confuse the
corporate trail, and to also crawl out from under some
depts, 'Megatronics' was taken over by a new company
by the name of 'Aicer'(?). Same people, same inventory,
yada, yada, yada. But, now they only sell to 'dealers',
not to the general public (hows that for a twist).
There were several notices about outstanding orders,
credit card payments, etc. Also a lot of financial
double talk. It basically means that if you bought
something from 'EEI/Megatronics', you are screwed, unless
you want to file suit (lotsa luck).
So, do you still wish they were around??
'Doc

I never POP my mail. Hotmail & Yahoo allow me to read mail remotely,
on someone else's machine. The rest of the accounts are unix.

My PC is clean. The one I picked up has 25 Klez infections.

BTW, a Mac is not a real computer. It is more so then WebTV,
but not by much. Writing a virus for a Mac would not have the
impact of a PC virus by virtue of sheer numbers.

That sounds like the ham vs. CB'ers thing, don't it?

You're right about the Mac vs. PC, but the
Mac is a pretty good set up. A lot of graphic &
web designers use Mac, also most musicians that
do their own mixing use a Mac. Just because it
doesn't have the same amount of software, doesn't
make it a computer, just a less desirable one.

Stay Dry and don't sweat the humidity :)

Heheh this is why once my new machine is built I will be running
exclusively linux except from the office, and there I bounce my email
off a linux shell.

The FCC AND the chance to get out from under obligations. Apparently, they only sold the profitable stuff to the new company and left the old one saddled with debt and just let it go under. This left creditors and customers with zilch and the FCC with nothing to collect.

Kenneth, upon perusing your post I had an idea. Athough enforcement is on the way up, the FCC is still understaffed. Myself, I tend not to worry a whole lot - until the amateur bands get affected (or is that INFECTED?). What we need, now that the FCC has given the green light to local regulation, is for the ARRL to start copying a lot of posts such as yours and when someone gets a video of a trucker, have the ARRL file a six or seven figure civil lawsuit against the company. Hurt a few lucky ones for 50 grand or so and bankrupt a couple of others. That might get some attention. I notice that no one seems to want to get on 54 - 60 MHz. I wonder why? Nervous?

Jim,

Often, whether realized or not, the overwhelming view is often that *I* want
more and
more and more and more, *I* don't want to have to work for it, *I* don't
want any
restrictions on my behavior, and/or *I* don't want to have to obey any laws
or learn
how to keep my operations from bothering other users---all this without
thinking how
such a situation would impact THEM as well as those they displace. Some of
us know
that we WERE in such a situation in the early part of the last century until
the Congress
stepped in and attempted to make some sense of madness, order from chaos.
It is for
that very reason that the Communications Act of 1934 came into being.
Though not
perfect, the FCC has done a pretty good job considering. Now if only we
could make
Congress see the error of their way in removing the funds needed to do the
huge job they have and return enough funds to return to CB enforcement in
the way it is needed Oh yes, they are responding to complaints, but I hope
for the day when they are even more pro-active in removing pirate operators
from frequencies and bands they have no business on.

Kenneth posted that only 8 CBers had been cited or warned in the last 3 years.
I was responding with cases that occurred within that time frame to illustrate that
there are many more than 8. If you had read the entire thread (troll) started by elpaso
gunslinger, you would've seen why I posted it. It was a challenge I couldn't pass up.
Twenty or twenty one cases are quite more than 8, I think.

It illustrates that if you operate on the bands without benefit of license,
you are most
certainly likely to get caught. Incidentally, there is more on the FCC
website on this
case, and along with what one of the regulars on here told me, he was a
CBer.

Jim,
That's about the 'size' of it. The really odd
thing about this whole mess was that a few months
ago, a supposedly secret memo 'floated' around a
couple of 'forums' that outlined the whole procedure.
The forming of the new companies, the purpose, and
the expected results. Things seem to have worked out
just as in the 'secret memo'. If a disgruntled
customer, or the FCC ~really~ wanted to take them
to the cleaners, I think it would be easy to do, not
cheap, but easy. Unfortunately, I doubt if it ever
happens.

Tell me what the difference is, then? Illegal is illegal, is illegal.
Kenneth says that
only 8 people have been cited or warned in the past 3 years. I proved him
wrong.
The presence, or absence of a license, or that of a CB is immaterial. Ken
thinks you
won't get nailed for operating on Amateur freqs. If most hams have their
way, an un-
licensed person, using a bootleg call or not, will get busted. And, yes, if
you dig a bit,
you will find that *most* of them are CBers. You know as well as I do that
anybody
that operates illegally in any radio service gets charged under the rules of
THAT service, not a service he may or may not have "come" from. The charges
only deal
with the rules broken in the affected service.

aaron.

Guess what! Be he CBer, Amateur, private citizen with a MURS radio, I H O P
E
he gets what's coming if he uses that radio illegally. The more illegal
operators Riley
hits, the less idiotic and useless junk legitimate operators have to put up
with. I don't
know how many times this has to be posted to get it thru the heads who try
to compare
the antics of illegal hams and illegal CBers. SO! Read slo o o o o o o w l
y! T H E
H A M S T H E M S E L V E S, F E D U P W I T H C R A P, N O I S E, Q R M-
E R S, A N D I N F A N T I L E O P E R A T O R S, A S K E D F O R F C C
TO R E T U R N T O E N F O R C E M E N T. N O W R E A D S L O O W-

M O V E D F R O M T H E A I R. P E R I O D A N D E N D!!!!!!!!!!!

If you wished to embarrass hams by this frail, empty, and pointless fact, OR
to make
some attempt to elevate the CB service while somehow reducing Amateur Radio,
you
have failed. Mr.Hollingsworth is one of the most popular attendees at
hamfests these
days, receiving hearty thanks and congratulations from legitimate hams,
while those who
would mistake his quiet demeanor, and biting wit as a sign of weakness, had
better hide
their bootleg gear, clean up their act, or face discipline. Riley got
placed in his current
position because hams PLEADED with FCC to DO something about the insane
antics
of a few bird brains on 3898 and 14.313. There are a few "brave" souls
around still, but they are far, far fewer than before. They, along with the
intruders that think that 40
channels isn't enough and they will "take" what they want, are quite
mistaken.

And I read the RainReport faithfully every 2 weeks and listen for Riley's audio account
of people getting what they richly deserve. Ham or not, I could not care less.

I'm not a lawyer so I wouldn't know. Unfortunately, an incorporated company DOES shield its' owners considerably. We'll have to see what happens in the Enron case as well as others - but usually what happens is that the government will get a chunk of funds; forget the folks who have lost their pensions. BTW, I did see that 'secret memo'. This really points out that you should know with whom you are dealing if buying equipment.

Glad you got a laugh Jay, but it looks like Twist doesn't find my
posts very funny at ALL. I guess he's gonna go into "ignore" mode now.
He does that whenever something freaks him out too badly or the
questions get too tough. Or maybe it was mentioning how I ran into
Richard Maltinos that spooked him. In any event, there are dozens of
claims Twisted has made in the ng, all of them waiting to be
substantiated.

Bill the two ideas don't logically connect. Knowledge of CW and electronics don't equate. There are plenty of Hams who can pound out CW at a blistering rate on the air, but yet have little technical knowledge of the inside workings of the equipment they use. The same can be said for the reverse argument as well, those with a great deal of knowledge in electronics and don't care one bit to use CW.

Hi "Tommy".

I think you are missing my main point... the address " cv3@keyway.net " may not be where it actually came from. The most likely source is someone who has that e-m in their address book, as the virus fakes the sender info with an address from the infected computers address book.

A couple of months back, I received an e-mail from "Net3media" claiming that I sent them a virus. At the time they sent that e-mail, I had not been on-line for some time... so it did not come from here, but from someone with my addy in their address book.
I did do a full scan (my anti-virus has weekly updates and would detect the named virus) but I found nothing. The IP of the "Net3media" e-mail matched their IP, so it was from them... but they ignored my request for confirmation
of that fact.

At the time that happened, one or two on this group were being attacked with continual attempts at infecting their systems. So I believe that it is very
likely that the infected user was linked with this newsgroup and has a few of us in their address book.

As I said before, I believe that the IP number could give more of a clue about where it really came from. You have to be careful about accusing because of the e-m in the header... Net3media p*ss*d me off with their accusation and ignorance in not replying.

BTW: You remind me of someone... do you have a sister called Georgina?
Just wondering.

Regards,

Brainbuster.

As there are so many posts about the virus problem, here's the latest Trend warning...

Not a Windows XP Key Generator - TROJ_DOAL.A (Low Risk)

This destructive malware comes disguised as a Windows XP Home Edition Key Generator. Upon execution, this malware creates the directory "Windows XP Home Keys" in the Program Files folder. In this directory it drops the text file "Windows XP Home Edition Serials.diz," which contains serial numbers for Windows XP Home Edition. It also creates a shortcut link for this file on the desktop.

It also drops a copy of itself with the file name "load.exe" with the Windows XP "My Computer" icon. At every system startup, it automatically executes this program and prompts the user with a bogus error message. The bogus error message indicates that the system does not have enough disk space on the installation drive, and asks whether the user wishes to continue. If the user clicks "Yes" it parses Drive C:\ and deletes files.

If you would like to scan your computer for TROJ_DOAL.A or thousands of other worms, viruses, Trojans and malicious code, visit HouseCall, Trend Micro's free online virus scanner at: http://housecall.antivirus.com/

TROJ_DOAL.A is detected and cleaned by Trend Micro pattern file #306 and above.

For additional information about TROJ_DOAL.A please visit:
http://www.trendmicro.com/vinfo/virusencyclo/default5.asp?VName=TROJ_DOAL.A

Jesus and Satan have an extended argument as to who is the better computer programmer.
Finally, they agree to hold a contest with God as the judge. They set themselves before their computers and begin programming. Typing furiously for several hours, they enter lines of code streaming across the screen.

Seconds before the end of the competition, a bolt of lightning strikes, taking out the electricity. Moments later, the power is restored, and God announces that the contest has ended.

God asks Satan to show what he has done. Satan is visibly upset and cries, "I have done nothing! The power outage destroyed all of my work!"

"Very well, then," says God, "let us see how Jesus fared." Jesus enters a command, and the screen comes to life in vivid displays of 3-D color. The voices of an angelic choir pour forth from the speakers.

Satan is stunned and stutters, "But how?! How did he do that?!"

God chuckles, "Jesus Saves!"

Brainbuster.

I just have a question - the frequencies between "Channel 40" and the 10 meter band aren't in use so what's the harm? Has ANYONE ever heard a LEGIT station using an assigned frequency between "Channel 40" and 10 meters? Just curious. Enforcing this stuff is like enforcing jaywalking or spitting on the street.

My personal opinion - if they venture into 10 meters, they deserve what they get. If they keep it below, they should be left alone.

CB radio Slanguage and language dictionary by Lanie Dills from 1976. Tells you all the 10 codes, Q codes and even funny 13 codes. It has all the slang words used in CB radio then and some still being used. The book is paperback and cover is a little scribbled but for the use it has had, it is in nice shape. This is a must have for the cb radio operator. you can view this auction at the link here:
http://cgi.ebay.com/ws/eBayISAPI.dll?ViewItem&item=1365091252

Thanks for looking.

On a personal level, I tend to agree and do not get stirred by activity below 28. But one of the reasons why we do not have allocations above 27.6 is that other countries do.

I refer you to http://www.vkham.com for a listing of 27 MHz Australian (hence the VK) Marine freqs which one poster here suggested are fairly popular in Oz. These are AM btw.

If it is a problem the Aussie authorities will bitch mightily to the FCC who are treaty-bound to fix the interferers' clock. How likely this is is your guess but I do not think I would like to be responsible for a marine fatality while bellowing BlaBlaBlooie.

>It's real simple,,,check the Texas court system that he said all these
>cbers were caught up in. They don't exist.
>

You accused me of something, prove it. It's impossible for me to prove that I'm not lying because you won't believe my "proof." I put up proof that the FCC's Official Observer program exists and you refused to check it out. I gave you web links that explain the program in great detail but did you check it out? Probably not. Or maybe you did because you certainly dropped it like a hot potatoe. I also gave you four callsigns of former hams who had their licenses revoked. Did you check them out? Nope. What do other kind of "proof" you want?

Did I say "CBers?" Nope, the FCC's Official Observer program has no jurisdiction over CB matters since there really isn't any inforcement going on anyway. The only time we "bust" CBers is when they incroach on ham frequencies, them we care otherwise we don't. Again, go back and check the thread, I never claimed to have busted any CBers. Just more twisy twisting and LYING! Yep, nothing more than a childish bully who has been challenged.

>
>> "TEN FOUR BIG BUDDY "BEEP". I will side with anybody 100% that chooses

>With more lies.

Again, they are "lies" because either you don't believe what I said or you don't agree with what I said. Very childish, nothing more.

> Kevin is full of shit.

This doesn't mean much from someone who just cries "liar liar pants on fire" and then says "prove you're not a liar." Just like a typical bully, they run when they are challenged. He called me a liar in "public," I challenged him to prove it and he can't. Nothing more than a childish bully. I know exactly how to deal with your kind.

>>Yeah, right....turn the tables to avoid having to prove your
>accusations. <
>
>Ummm, the accusations were yours Muenzler, I merely asked you to back
>them up and you went to pieces and began acting out.

Like I said before, you accused me of LYING, you never asked me for "proof."
In this country when a person is accused of something the accuser has the
burden of proof.

>
>>What accusations did I make? <

>You made many, including accusing me of being several insultive names,
>because you can''t effectively have a friendly discussion or
>disagreement. You turned rabid when I merely asked for some substance of
>your claims. AFTER you insulted and added more lies in a failed attempt
>at covering your original lie, I called you a liar, but anyone can now
>contact the great state of Texas and find that out for themself.

Ok, prove me wrong. They aren't insults if they are true, prove they are
not true. Prove that you have an ounce of integrety by checking out the
ARRL and FCC web sites concerning Official Observers. When you do and find
that I was, and still am, telling the truth please admit it here. But you
won't, you are nothing more than a bully that has been challenged.

>You are the one making the accusations. I made claims, you made
>accusations of me being a liar because you don't believe them. <

>Because they don't exist, Muenzler. You realized you were in over your
>head when you mentioned the "request" bullshit from some judge. Judges
>don't request Jack, Muenzler, they order it, especially when it comes to
>not leaking something or another.

So you've had extensive experience with the Texas Court system have you?
Remember this isn't the "Texas Court system" because they are federal cases.
Get YOUR facts straight and maybe you can follow me and won't be confused so
that you call me a liar and make a fool of yourself.

>What else is absolutely hilarious,
>that I never even mentioned yet, is that there would be no reason

>whatsoever for a judge to issue a ban on talkiing about a cb case, or
>even a request, concerning ALL these hammies. None are in the court
>system of Texas. Not a mystery.

Also remember that the FCC Official Observer program doesn't deal with
CBers. I never claimed that it did. It only deals with violations of FCC
Part 97. If a CBer or anyone else comes onto the ham frequencies where he
is not authorized to operate then the Official Observers have jurisiction.
Other than that we don't care what kind of freebanding you do. Before we go
down this trail, I'm not accusing YOU in particular of freebanding.

>>I don't have to provide proof of my claims. <
>
>Of course you don't....unless you want to be believed.

That's right, in this country the accuser has the burden of proof...so prove
me wrong.

>>I really don't care if you believe me or not.
>>I made statements, you called them lies, prove they are lies. That's all
>>I ask.<

>That's pretty funny. The burden of PROVING anything lays with you.

Says who? You? What country are you in? Since when does the accused have
to prove anything?

>>Well, in this country at least (I don't know which on you are in) the
>>burden of proof remains on the accuser. You accused me of being a liar,
>>prove it.<

>Yea? Well get this, on usenet, the burden of proof lays with the one who
>makes the claims....

Ok then, you claim that I am lying....prove it.

>...but anyone who wishes to search, or better yet, make
>the calls, will find exactly what I said......none of it happened the
>way you claimed. Get over it.

Did you? I don't think so. Did you search the internet and find that the
FCC Official Observer program doesn't exist? Nope because you can go to any
one of the two or three web sites that I gave you and see that it does. Did
you find anything else contradictory to what I said? Nope otherwise you
would have posted the links here.

>> I gave you a few callsigns, check them out. You seem to be very good
>>at going to the internet and doing searches, go for it. I never said
>>anything about "gag orders" I said that the court requested that the
>>cases not be discussed, there was never an order. <
>
>
>
>See above.

Ok, where are the links? Obviously you did an extensive search. Show us what you came up with.

>YOU made the claims, and were caught up in the lies concerning "gag >orders" that were never issued, you then back-pedaled fiercely claiming >they were not gag orders at all, but mere requests.

Again, I never said "gag orders." But I guess if you really want to get techical the request would be in court documents taken by the court reporter.

>>Yep, just like you said that I claimed to have "personally busted 27 >>hams." I never made such claims and posted my exact words back into the >>thread. You quickly changed the conversation. I never said that there >>were gag orders. Go back and read the thread.

>The requests are part of
>the public record... transcripts as well as case numbers, court jacket >info., judges name, prosecutorial teams name, etc., etc., are all there >for the taking and you have failed to produce ANYTHING of substance at >all, except to insult and cry "PROVE I'm lying." I already did, only you >don't have the intellect to realize it.

So what is the basis of your accusations? You don't believe what I say? Would THAT hold up in any court? Nope, you'd be laughed out of court. Again, if you have done such extensive searches then post the URLs.

>>You have proven nothing other than you are a blazing fool that can't >>hold course in a conversation.<

>Oh, now that's really rich.
>It was you Muenzler, not I that exhibied the deficit in the art of >effective communication by hurling insults. Claimig otherwise doesn't >make it any more true that your previous lies.

I believe it was you who was first to fire the insults by saying that I was "full of shit." More bully tactics and diversions that have nothing to do with your claim that I am lying and the fact that you have no proof.

>> When you make accusations of something that I said and I re-post my >>exact words showing that it is YOU that are lying you quickly change the >>course of the conversation. Grow up.<

>All this because I merely asked you to back up what you said. You >haven't.

No you didn't ask me to "back up what I said." You called me a liar and then told me to prove that I am not. It doesn't work that way.

>>Since you are unwilling to even do this then I guess the conversation >>is over. <

>It was over the first time you said "Prove I'm lying."..

Yep, because you can't.

>>That's right, because you can't prove that I am lying, <

>I had a hand in it, the great state of Texas proved you were lying.

OOOO! The bully strikes again.

>>anything else is just you blowing smoke.
>>But in the interest of fairness, to a point, here are four callsigns who
>>are no longer allocated because of convictions and/or license
>>revocations in the past two years.
>>K5UJA, WA5NOP, KC7HPA, N5NLQ <

>And these mean absolutely nothing in the context of your lies.

>>Because you are either too lazy or afraid to check them out. Just like
>>you are either too afraid or lazy to check out the Official Observer
>>pages at the ARRL. You made the claims that they don't exist.<
>
>
>No, re-read exactly what I typed.

Maybe I'm missing something. Why do they have no context. These are callsigns of those who have their liceses revoked because they were nailed by Official Observers. What's out of context. You asked for proof and I give you four callsigns but you, in form, are too lazy to check it out.

>>You want to play semantics? It was only AFTER I claimed there was NO
>>SUCH THING AS AN OFFICAL FCC OBSERVER that you dropped that tag like a
>>hot potato.

>Incorrectly referring to yourself as an FCC observer was
>intentionally misleading and deceitful.

So what do I need to do? Mail you the acceptance form from the ARRL making me an Official Observer? I don't know how to else to "prove" it to you. Search the net for "FCC Auxilary" or "Official Observer." I doubt that you would be couragious enough to give me your address in the first place. OOPS! You won't have "proof" so I'm still "lying." You are a real piece of work.

>> It's much too easy to just sit back and cry "liar, liar pants on
>>fire." Like I said, you and Mopedaholic are nothing more than two (one)
>>childish characters. No wonder it's called Children's Band.
>>Kevin, WB5RUE<

>Well, this group of children buried your lies.

You must be a real legend in your own mind....most bullies are.

Kevin, WB5RUE

From: joxendi@bellsouth.net (Jerry Oxendine)
>Tell me what the difference is, then? Illegal is illegal, is illegal.
Kenneth says that
only 8 people have been cited or warned in the past 3 years. I proved
him wrong. <

Frustrating, isn't it? I did the same thing with Muenzler and
Frankenvoob. I also concur with the "more more more" mentality, as Frank
has begged "gimme gimme gimme" for answers but never likes to give any
himself. Don't let it bother you too much. When you're right you're
right and everyone can plainly see so.

>The presence, or absence of a license, or that of a CB is immaterial. <

Finally......

>Ken thinks you
won't get nailed for operating on Amateur freqs. <

Oh, I think the possibility would be there, but I don;t think it would
be a probability. Sheer stupidity on anyone's behalf to operate on a
hammie freq when they are by and large giving away licenses today,
figuratively. But nothing stops one from botlegging, Jerry. An obscure
call, deceased, etc., could be adopted if one were so inclined and if a
low profile was kept, none would be the wiser.

>If most hams have their way, an un-
licensed person, using a bootleg call or not, will get busted. <

If they are unlicensed and on hammie channels, they should be popped.

>And, yes, if you dig a bit,
you will find that *most* of them are CBers. You know as well as I do
that anybody
that operates illegally in any radio service gets charged under the
rules of THAT service, not a service he may or may not have "come" from.
The charges only deal
with the rules broken in the affected service. <

The hammies getting popped outnumber the cbers by a staggering ratio
which brings us to certain hammies' circular argument: There is no
enforcement for cb. Well is there or isn't there? You guys can't even
agree on this. Well, lemme tell ya', the enforcement is right where it
belongs...on the ass of the hammies. Overall, hammies have more power
than cbers and have a greater potential to do harm due their frequency
coverage. And so they do. And so follow the feds. Really simple stuff...
even for the hammies that feel their ticket demands respect.

J<

Thats pretty funny .Go to the rain report and see how many hams are
getting busted a month and compare that to cber's.Jerry, you sound just
like aaron.

>Guess what! Be he CBer, Amateur, private citizen with a MURS radio, I H
O P E
he gets what's coming if he uses that radio illegally. The more illegal
operators Riley
hits, the less idiotic and useless junk legitimate operators have to put
up with. I don't
know how many times this has to be posted to get it thru the heads who
try to compare
the antics of illegal hams and illegal CBers. SO! Read slo o o o o o o w
l y! T H E
H A M S T H E M S E L V E S, F E D U P W I T H C R A P, N O I S E, Q R
M- E R S, A N D I N F A N T I L E O P E R A T O R S, A S K E D F O R F C
C TO R E T U R N T O E N F O R C E M E N T. N O W R E A D S L O O W- LY:
T H E O V E R W H E L M I N G M A J O R I T Y O F H A M S A R E E L A T
E D T O S E E A L L I L L E G A L O P E R A T O R S R E - M O V E D F R
O M T H E A I R. P E R I O D A N D E N D!!!!!!!!!! <

Now, Jerry, you know darn good and well everything you mentioned above
is caused by.....another hammie the majority of the time.

>If you wished to embarrass hams by this frail, empty, and pointless
fact, OR to make
some attempt to elevate the CB service while somehow reducing Amateur
Radio, you
have failed.<

Jerry, once again, take a long hard look at
just who is consistently bringing hammie radio
into this group......that's right,,,,,other hammies who feel their
ticket deserves them respect regardless of their antics. Nobody is
putting down hammie radio. If certain hammies didn;t have a hard-on for
the subject in this ng, it wouldn't be brought up. If it wasn't brought
up, it couldn't be "reduced" like some of the lowlife's have effectively
portrayed it.

> Mr.Hollingsworth is one of the most popular attendees at hamfests
these
days, receiving hearty thanks and congratulations from legitimate hams,

while those who
would mistake his quiet demeanor, and biting wit as a sign of weakness,
had better hide
their bootleg gear, clean up their act, or face discipline. Riley got
placed in his current
position because hams PLEADED with FCC to DO something about the insane
antics
of a few bird brains on 3898 and 14.313. <

Ask him how he achieved this position the next time you talk to him,
Jerry. Ask him who his sponsor was. Ask him how he was tapped.
Pure politics, nothing amazing of his appointment at all and it
certainly wasn't because of any tough-as-nails past reputation.
He WAS selected, but I'm not certain we agree on WHY.

>There are a few "brave" souls around still, but they are far, far fewer
than before. They, along with the intruders that think that 40
channels isn't enough and they will "take" what they want, are quite
mistaken. <

Surely you don;t mean the freeband, especially since the skip is
becoming friendlier to only the hard core DXers.

>And I read the RainReport faithfully every 2 weeks and listen for
Riley's audio account
of people getting what they richly deserve. Ham or not, I could not care
less. <

  Jeebus H. Quisp! Who the heck cares what proof there is? <
Kevin does, otherwise he wouldn't keep crying for proof that he's lying.
It's real simple,,,check the Texas court system that he said all these
cbers were caught up in. They don't exist.

>You accused me of something, prove it. <

I did. You want a wave file of the call? Get a grip. What you really
want is the "how did he do it." Same noise as Sparky.

>It's impossible for me to prove that I'm not lying because you won't
believe my "proof." <

You put up no proof at all.

>I put up proof that the FCC's Official Observer program exists and you
refused to check it out. <

I'm not debating that, I'm debating you implying it was a sanctioned,
FCC run program, lent false credibility by you falsely referring to
yourself as an offical "FCC observer" which you have since stopped.

>I gave you web links that explain the program in great detail but did
you check it out? Probably not. Or maybe you did because you certainly
dropped it like a hot potatoe. <

Nothing to drop.
You must have missed those posts or merely forgot what you read, but we
did indeed address that issue, but you still have failed to produce what
my main issue with you was...your lies concerning the radio busts in the
Texas court system.

>I also gave you four callsigns of former hams who had their licenses
revoked. Did you check them out? Nope. What do other kind of "proof" you
want? <

Something that corroborates your claim. Posting 4 hammies that were
popped means zilch. Were they all in the Texas court system since
Christmas too, Kevin?

>Did I say "CBers?" Nope, the FCC's Official Observer program has no
jurisdiction over CB matters since there really isn't any inforcement
going on anyway. The only time we "bust" CBers is when they incroach on
ham frequencies, them we care otherwise we don't. <

A valiant effort. I have no issue with that nor did I ever attack that approach.

>Again, go back and check the thread, I never claimed to have busted any CBers. <

You read it, Muenzler. Matter of fact,
all you have to do is look at my original subject line above......it clearly says RADIO busts.

>Just more twisy twisting and LYING! <

I don't lie, Kevin. No need too. I can back what I say, and if so inclined, provide proof. You can not say the same.

>Yep, nothing more than a childish bully who has been challenged. <

Hell yea, I agree. Look at what happened to Lelnad, Dogie, Sparky, George,,,,,the AKC was formed. You're barking up the wrong tree.

> "TEN FOUR BIG BUDDY "BEEP". I will side with anybody 100% that chooses to "bust" any "radio problems", be it C.B. or amateur radio. If a person disobeys the laws, hehe, perhaps they deserve to be "busted". Maybe not, but that's just MY opinion.<

If a person disobeys the laws, "hehe?"
I agree, some fo the laws are indeed a laughing matter. I don;t have a problem with Kevin lending his self to catching radio villains, or anyone for that matter. Liars are another story. If one lies, nothing about them can be considered even remotely credible. Kevin made the claims, I asked for something, anything for him to back them up, as I knew before he even posted of the 9 cbers that were involved in state court systems last year across the country, so if I am guilty of anything, it is setting him up like a bowling pin to reply. And he did. With more lies.

>Again, they are "lies" because either you don't believe what I said or you don't agree with what I said. Very childish, nothing more. <

Kevin is full of shit.

>This doesn't mean much from someone who just cries "liar liar pants on fire" and then says "prove you're not a liar." <

I never asked that. I merely asked for some type proof, then called you a liar after you became insultive.

>Just like a typical bully, they run when they are challenged. He called me a liar in "public," I challenged him to prove it and he can't. Nothing more than a childish bully. I know exactly how to deal with your kind.
Kevin, WB5RUE<

Like Frank said, ignore when the questions are too tough or make you uncomfortable? Yea, I can see that.

Subject: City Ordinance
To: alexandc@ci.beloit.wi.us

Hello Carol,

I am doing a follow up to the information you provided
Mr. "Twistedhed" re: the City Of Beloit and CB radio.
Attached below is an email from you that he posted to
Usenet newsgroup rec.radio.cb.

It seems there is a Senate bill on record, S. 608,
introduced by Wisconsin Sen Russell Feingold some time
ago. The Feingold bill had reportedly been introduced
at the request of municipal authorities in Beloit,
Wisconsin, who had been unable to stop illegal CBers
driving Beloit residents crazy with interference.
Vernon Ehlers (MI) also introduced similar legislation
(HR2346) which was subsequently signed into law by
Pres. Clinton.

Mr. "Twistedhed" infers that CB interference in
general cannot be much of a problem since the specific
city of Beloit did not even take advantage of a House
Bill designed to help curb such interference. Can you
comment on this? My questions to you are:

1. Was the problem in Beloit with CB interference
legitimate?
2. If so, have any steps been taken to solve it?

Sincerely,

A. H. Voobner

re: the City Of Beloit and CB radio. Attached below is an email from you
that he posted to Usenet newsgroup rec.radio.cb.
It seems there is a Senate bill on record, S. 608, introduced by
Wisconsin Sen Russell Feingold some time ago. The Feingold bill had
reportedly been introduced at the request of municipal authorities in
Beloit, Wisconsin, who had been unable to stop illegal CBers driving
Beloit residents crazy with interference. Vernon Ehlers (MI) also
introduced similar legislation (HR2346) which was subsequently signed
into law by Pres. Clinton.
Mr. "Twistedhed" infers that CB interference in general cannot be much
of a problem since the specific city of Beloit did not even take
advantage of a House Bill designed to help curb such interference. Can
you comment on this? My questions to you are:
1. Was the problem in Beloit with CB interference legitimate?
2. If so, have any steps been taken to solve it?
Sincerely,
A. H. Voobner

615. New 22 Channel FRS & GMRS Radios?

Newsgroup: rec.radio.cb
Date: 2002-07-08 03:51:35 UTC
From: Jay in the Mojave <jay123a@qnet.com>
Message-ID: <3D290C47.41C8EB99@qnet.com>
Source record: 129644

Hello All:

I saw over at Wall Mart today FRS and GMRS small hand held radios.

The printed material on the box said it was a 2 watt radio, and had 22 channels.

What is this new radio?

Jay in the Mojave

As I noted in another thread - of all those you listed, only two or
three were identified as CBers. All the rest were people using Ham
gear on Ham frequencies - with no mention of CB usage.

It looks like you have another 5 or 6 to go.

If Kenneth made that claim, he is certainly wrong. There have been that
many Hams cited for illegally transmitting in the CB band (mostly jamming).

No reason for Frank or anyone else to squirm when reading your posts.
On the contrary, I've succeeded in teaching you to do the legwork
necessary to back up your mouth. Now that you've been properly
trained, we can move forward, with the the City Of Beloit to help
clarify your utterances. So Twist, Beloit has enacted no recent
legislation regarding CB -- and this proves.....what? :)

Let me tell you something about Lou Franklin, back around 1986 I was a frequent CBC customer. I purchased a number of books, several expander kits and two President Lincoln's. Everything went fine until I received the second President Lincoln. It arrived DOA and I tried unsuccessfully to contact ole' Lou about a replacement. It took me nearly two weeks to get a straight answer from him, now the clincher. He denied he ever sold "Lincoln's" and he said there was nothing he could do. I don't know if his supply dried up or he was feeling some heat from "Uncle Charlie." I was basically stuck with a doorstop for a radio, out some $300 and Lou didn't make good on the radio. It sat in the box for nearly a year before I was able to find a technician who was willing to repair the radio for an additional $60. Long story short, Lou burned his reputation over one radio and never received another cent from me.

Basically a really cheap GMRS radio. They still require a license, however they have it in small print on the back of the carton, so chances of it being noticed before (or even after) purchase are slim to none...

Jay,
Was it made by 'Audiovox'? If so, it's mostly
a lie. The output power isn't even close to 2w,
and the number of channels encludes the normal 14
for FRS and then the 'shared' channels of GMRS.
The 'FRS' newsgroup had a link to a test done
on this little radio a while back. Needless to
say it didn't live up to it's advertisement. (It's
a nice little radio though).

Let me get this straight? We are at war and in one day lost more
americans then we did at Pearl Harbor. The middle east is about to explode.
India and Pakistan are about to nuke each other. Iraq's first nuke is almost
finished. North and South Korea's naval forces defacto at war and you want
funding for WHAT!!!!!!!
Now that's funny:)

And you apparently "forgot" that these are federal cases (which you pointed out as a "flaw" in my logic). Yes, they are in Texas but not in the Texas court system. The calls that I gave you never made it to court anyway. They received their NAL from the FCC and capitulated due to the overwhelming evidence.

>
>>I also gave you four callsigns of former hams who had their licenses

Aaron,

Don't waste your time. Lou Franklin is only spamming the newsgroup. He would never stoop so low as to engage in meaningfull debate over his exploitative practices over the years. I am sure that he has made quite a few bucks catering to the needs of screwdriver tech wannabe's, and perpetuating "CB science", to all gullible enough to read it.

You shouldn't have to ask whether he has a conscience. What person does who places monetary gain above moral conduct?

>Ok then, I'll say it again. I am a member of the "FCC Auxilliary" also known as an "Official Observer." You say that I am not, prove it.<

I never said you weren't. Go read what I posted again. I said you weren't an "OFFICIAL FCC OBSERVER", like you called yourself in the beginning, and what you have not done since.

>I gave you web links that explain the program in great detail but did you check it out? Probably not. Or maybe you did because you certainly dropped it like a hot potatoe. <

Nothing to drop.
You must have missed those posts or merely forgot what you read, but we did indeed address that issue, but you still have failed to produce what my main issue with you was...your lies concerning the radio busts in the Texas court system.

>And you apparently "forgot" that these are federal cases (which you pointed out as a "flaw" in my logic). Yes, they are in Texas but not in the Texas court system. The calls that I gave you never made it to court anyway. <

Exactly,as they have nothing to do with your claims concerning the court system, which is what I asked for. As I claimed, those calls mean absolutley zilch in the context of your claims. Thanks for clarifying.

>They received their NAL from the FCC and capitulated due to the overwhelming evidence. <

So do thousands of other hammies each year. ..BFD!

>I also gave you four callsigns of former hams who had their licenses revoked. Did you check them out? Nope. What do other kind of "proof" you want? <

Something that corroborates your claim. Posting 4 hammies that were popped means zilch. Were they all in the Texas court system since Christmas too, Kevin?

>Nope, not in court at all. <

So what does this have to do with your claim they were all in court due your efforts since Xmas? Again...nothing.

>Did I say "CBers?" Nope, the FCC's Official Observer program has no jurisdiction over CB matters since there really isn't any inforcement going on anyway. The only time we "bust" CBers is when they incroach on ham frequencies, them we care otherwise we don't. <

A valiant effort. I have no issue with that nor did I ever attack that approach.

>Then why did YOU bring it up? <

Again, go back and check the thread, I never claimed to have busted any CBers. <

You read it, Muenzler. Matter of fact,
all you have to do is look at my original subject line above......it clearly says RADIO busts.

>I never claimed "RADIO busts." That's YOUR twisted subject line. <

Really? Who are all the folks you have lied about having tied up in the court system?
Speeders?

>Just more twisy twisting and LYING! <

I don't lie, Kevin. No need too. I can back what I say, and if so inclined, provide proof. You can not say the same.

>I can produce post after post of your own words where you have twisted my words into something that I never said.<

But you can't post a single post lending asolute credibility, say, from like a government or city source...because it didn't happen. There is no way you can garner respect and get anyone to believe anything you say after your multiple lies. You make claims, then claim there can be no record of it anywhere unless one pays, then you claim that the judge asked the court to remain "mum' about the cases. More bullshit on top of bullshit.

> Either that means that you are LYING or that you are deluded enough not to know the difference.
Yep, nothing more than a childish bully who has been challenged. <

Hell yea, I agree. Look at what happened to Lelnad, Dogie, Sparky, George,,,,,the AKC was formed. You're barking up the wrong tree.

> "TEN FOUR BIG BUDDY "BEEP". I will side with anybody 100% that chooses to "bust" any "radio problems", be it C.B. or amateur radio. If a person disobeys the laws, hehe, perhaps they deserve to be "busted". Maybe not, but that's just MY opinion.<
I
f a person disobeys the laws, "hehe?"
I agree, some fo the laws are indeed a laughing matter. I don;t have a problem with Kevin lending his self to catching radio villains, or anyone for that matter. Liars are another story. If one lies, nothing about them can be considered even remotely credible. Kevin made the claims, I asked for something, anything for him to back them up, as I knew before he even posted of the 9 cbers that were involved in state court systems last year across the country, so if I am guilty of anything, it is setting him up like a bowling pin to reply. And he did.

With more lies.
>I don't remember posting anything about "nine CBers" being in the state court system. <

You didn'...I DID. That's the total in the state court systems for 2001 relating to cb.

>Like I keep saying, and you keep ignoring, the FCC doesn't deal with the state court system. <

Oh, so all your busts are now federal, hmm, ok, that makes it so much easier...and 27 of them are in TX that have been made to appear in court all since Xmas. And the judge "requests" no comment.......LMAO! "Fraid not. See KEvin, the federal cases are easier to track down than the state cases..you just keep rolling deeper in the fecal matter.

>Again, they are "lies" because either you don't believe what I said or you don't agree with what I said. Very childish, nothing more. <

Kevin is full of shit.

>Back to the empty insults, eh Twisty.
This doesn't mean much from someone who just cries "liar liar pants on fire" and then says "prove you're not a liar." <

Not at all. You're back to repeating yourself. You insulted me many, many times, lied about it and said the insults first come from me. I again showed you a liar concerning that, by posting a few of your many insults you lied about hurling.
You're a lia,r Kevin. Deal with it.

I never asked that. I merely asked for some type proof, then called you a liar after you became insultive.

>Twisting again. I made claims, you called them lies and asked for proof.<

Ahh, yes, but I didn't CALL you a liar until you began hurling insults.

>Just like a typical bully, they run when they are challenged. He called me a liar in "public," I challenged him to prove it and he can't. Nothing more than a childish bully. I know exactly how to deal with your kind.
Kevin, WB5RUE<

Like Frank said, ignore when the questions are too tough or make you uncomfortable? Yea, I can see that.

>You haven't asked any "questions." <

How about this? Do you have any proof that you can share with us that will leave no doubt
what you claim? No, Muenzler, you don't, or you would have posted it and made 'ol Twisty dine on some crow like Frank has been chokingly enjoying.

>You called me a liar and you can't/won't prove it. Nothing more than a bully. Until there is PROOF from your side this conversation is ended. Kevin, WB5RUE<

Of course it is. Like I said, it was over the day you opened your lying mouth and couldn't back your claims. Your insults afetr being asked to prduce solidified your position forevermore among us. You now have the full backing of the AKC. Enjoy, and congratulations.

Hello Doc:

I have to go back into the big city, and I will look at them again, and maybe even buy a set. I was pretty sure they where manufactured by Cobra.

I didn't have time to read the fine print as I was working at the time, and was short on time. But I thought these small hand held, no wait Palm held radios where something new. Me go look again.

I think theses radios where something $119.00 a set, and didn't know why they where so expensive? I believe they took only 3, Double AA batteries, so not having a full 2 watts sounds right.

Whats the FRS web site alt.family.radio.frs ? I had it programed in once.

I will have to re-program in the FRS and GMRS frequencies into my scanner fer listen 2. Got the local Sheriff and Fire, guys all down. I have listened to some FRS channels, and could identify a few of the locals from their voice and slipped out in conversation "call sign", kind of funny. These guys sounded pretty loud and clear what is the power capability, 100 or 200 Milli Watts?

I am sure the guys on the FRS/GMRS news group will have the FRS and GMRS frequencies. I had mine wriiten down on a napkin, its now long gone.

Maybe these type radios will be shown at the Westcon Convetion in Anaheim So Cal, this Sep????

I was referring to Twistedhed only, Brian. What reason would you have
to express hate hate for me? (Does being an illegal CB amplifier
manufacturer have anything to do with it?)

Kevin, WB5RUE

-No matter. He'll find someone else in here to annoy with his twisted logic.>

Truth hurts you boys.

> It actually works out pretty good. <

It does. Look at the fans you have garnered and look at Muenzler falling apart at the seams reinforcing the poor image of a rabid hammie with poor communication skills who takes to calling names, mulitiple insults, and lies for a prsonal agenda.

>Because when the hard core amplifier boys and bootlegger-freeband promoters see the NG filled with "Twistedhed"-related posts -- they flee.
-Aaron-<

Must be why I receive so many invitations to keydowns, have met several fine folks from this board, and have several of their telephone numbers (even a very vocal hammies who doesn't agree with freebanding). The difference is, he is skilled in communications and diplomacy. There are several fine hammies present that you can emulate.
Poor chap. Check it out....when one approaches a city official, it must be done in a semi-professionally manner. A well written letter will not reveal your personal feelings, as it matters none to the recipient. My personal opinion doesn't change the particulars, but I am flattered you feel it so important as to include it and share it with an official, as if it will somehow change the fact that what I claimed is true and regain you some face you lost. I find it curious the extent you go, and the energy you exude focusing your personal dislike for me, as opposed to spending your time on something that is actualy productive. Your communication skills are as poor as ever. Stop letting your personal feelings dictate stupidity and stick to the topic.

Big Gun chaser awayer <g>

> Now that's funny:)

Maybe to you, but not to the MILITARY users of that so-called "freeband" you
are
so fond of. Sure, much of what they do is on digital, satellite, etc. but
certain of those
frequencies you say "nobody uses" ARE used for close-in stuff (It's called
"Tactical
Communications".) How do *I* know that? Because I USE several of those
frequencies that are assigned by USAF to their Auxiliary only to have to
listen to the
QRM on adjacent frequencies. And, yes, I am authorized to use them. So I
certainly
AM interested in seeing something done to remove the CBers from on and
around
such frequencies that WE use for certain missions that VHF is not suited
for--like in mountain valleys, for example. Around here, except for the
"skip", I can often listen to
the CB channels and hear nothing. The folks seem to congregate on channels
1, 3, 11
or 30. The rest go begging, so it's not like there's no elbow room. Oh,
incidentally, the
armed services DO use un-coded HF radios, and can be heard if you know where
to

look.

> It looks like you have another 5 or 6 to go.

I don't give a damn WHO they are, or what kind of equipment they use, I want the
damned sons of bitches off frequencies they don't belong on such as the
10/12 meter ham band AND the military frequencies I use trying to save lives
(not MARS). Again,
Kenneth is trying to imply that FCC is not, cannot, and will not do anything about
the intruders. And because CB may or not be mentioned, you are not going to tell
me that the truckers I cited aren't "CBers" who just happen to be using those Galaxy
and Connex, or SuperStar so-called "10 meter" radios, or that "Rabbit Ears" isn't a
CBer run amok. Now THAT was a gratifying picture--seeing him led away in chains
and leg irons. I certainly showed that enforcement is accelerating compared
to the years prior to 1999. Hey, Riley hit a few hams for operating on 27.585 according the
Sunday's RainReport, and I say GREAT!! I don't cull 'em; a bad op is a bad op is a bad op no matter WHAT you call him.

If a person wants access to frequencies, then he should show the responsibility, the
maturity, and the courtesy to both the authorities and the people his operations can
effect by fulfilling the requirements for that service. As far as Amateur Radio is con-
cerned, it is available to anyone who wishes to use it if they simply take the now extra-
simple test for the Tech license. If they operate with even the basic courtesy due their
fellow man, and without the "cutesy" lingo (<<shudder>>), they will be welcomed into
the hobby with open arms. Attempt to just take the privilege, you will be met with

hostility, angry hams out DFing you, and, eventually, an "Evidence before the Commis-
sion indicates that you have..... You are requested to contact me at *** ***
**** to discuss this matter" Signed, Riley Hollingsworth".

They will never know it. The person walks in, buys a Coke and browses
around
the store looking at the CB radios and antennas. Then he might grab one of
the
cashier tickets that is normally taken to the cashier for purchase, and
write down
the description of the illegal "10 meter" radio> I've DONE it--I have one
of those
Magnum Delta Force tickets right in front of me right now! I found it in a
truck stop
in Columbia, SC. A copy went to the "right" place.

Will the FCC ever do anything about it? No Never Not in a
> million years.
> Look at the bust's the FCC have made. Something like 8 busts over a 3
> year period and half of them are Ham's. The rest are base stations that

Bill,

Here's where he said "8", and half of them are NOT hams; they are IN
ADDITION
to the 21 I cited.
> Truckers will continue to buy Galaxy's and Superstar's and linier's and
> use them and people will sell them.

Nope. If the folks could keep from wandering into other bands and
frequencies,
I'd agree with you. But by operating on the ham bands and causing
interference to
the rightful users, the truckers, maybe unknowingly, are opening up a can of
sour
worms that also BITE!!
> Voobner and his ilk will continue to annoy the fcc post msgs here while
> worring that someone somewhere might transmit more then 4 watts and

generaly
> make an ass of himself.

It does no good to bother people about operating on the CB band illegally.
But when they operate on the ham bands illegally, then it becomes another
story.

Frankly I fell sorry for him. If he has a liscense
> it brings him zero enjoyment. Everyday I use my superstar as a tool and
have
> fun contacting people all over the US. Voobner meanwhile worries and scans
> the internet for someone to point his finger at and say"your the bad guy"
>

Buy the way three truck stops I have seen sell full blown ICOM Ham rigs
and one even had a marine radio.

Would you like to PROVE your assertion that FCC WON'T do anything about
sales of illegal radios like the Magnum Delta Force? Then tell us WHERE you
saw
those ham rigs, which, BTW, are not in and of themselves illegal to sell,
but I'd bet you that if they are selling them, they are also selling the
unapproved ones, too. So
tell us where these truck stops are so I can send it to Riley, and we will
see if he does
anything.

J

Five guys I know wanted Ham rigs and just
> went out and bought them and installed them and use them and they tell me
> most Hams talk to them and only a few mention that the should get a
> liscense.

You mean a letter creating the impression you're a local Beloit resident making a sincere request for information on CB legislation because he wants to conform to the law? That's not "semi-professional", that's DUPLICITOUS and DECEITFUL. And what about this alleged email you claim to have written to Beloit, WI and recieved replies from? I don't see any headers on the email or the reply. No date on her reply. In fact, no header info whatsoever on her reply. Verrrrry suspect, Twist. I'd be verrry disappointed if I found out you had not learned your lesson about backing up your claims and instead are trying to scam the NG. And then there's the bigger picture: all this propaganda effort from you - for what? To prove there is no CB interference problem and hence no need for laws? LOL. Good luck. I haven't seen you this worked up since you found out there were a substantial number of people on this NG that think you're an idiot.

We should also defund what has cost this country more than 5 trillion dollars over the past 35+ years.....welfare! We did just fine as a country for 180 or so years before welfare. People didn't have kids because they couldn't afford them. Now people are having kids because they can't afford not to have them.

<

Another failed and flawed interpretation on behalf of the ignorant, an
assumption. There are multiple reasons you fail to comprehend or
recognize for that wording. I may be going there on a trip and wish to
know. It makes no difference other than the cause of your feathered
diet.

>making a sincere request for information on CB legislation because he
wants to conform to the law? That's not "semi-professional", that's
DUPLICITOUS and DECEITFUL. And what about this alleged email you claim
to have written to Beloit, WI and recieved replies from? I don't see any
headers on the email or the reply. No date on her reply. In fact, no
header info whatsoever on her reply.<

As I said, email Carol yourself.
It would be terrible to go through life carrying the burdens you
shoulder. It isn't any wonder you have too much time on your hands, have
made us your family and treat us as such

>Verrrrry suspect, Twist. I'd be verrry disappointed if I found out you
had not learned your lesson about backing up your claims and instead are
trying to scam the NG. <

Gee, that would be almost as bad as me being solely responsible for
cleaning your sorry clock on a regualr basis, driving you underground.
Don't worry, you have the market cornered..

>And then there's the bigger picture: all this propaganda effort from
you - for what?<

I beg your pardon?

>To prove there is no CB interference problem and hence no need for
laws? <

Your recall impairment has manifested. You whined several times to me
for that information. You went so far as to accuse me of ignoring you
when you didn't get what you redundantly pleaded for. You then turn
around, not thinking about what you're actually typing, and claim the
opposite, that I "scrambled" to answer, providing yet another

self-contradiction for which you are so infamously known. The fact is, you really don't know what the hell is going on, you just need someone like me to remind you every once in a while, to point it out...like being read to, or spoon fed. BUT..you are to be commended for the valiant but failed attempt at taking the heat off Muenzler for lying, but I'm done with him anyways...as you said, he will avoid providing answers that are verifiable and will clam up when the questions make him uncomfortable.

>LOL. <

LOL

>Good luck.<

I don't believe in luck. Luck has nothing to do with you contradicting yourself, your impotence does.

>I haven't seen you this worked up since <

I already used that line on you. Try as you may..

you found out there were a substantial number of people on this NG that think you're an idiot.
  -Aaron-<

Your close-knit clique of a few angry, ignorant hammies does not qualify for the definition of "substantial". Nonetheless, I'm an honest idiot, unlike yourself and Muenzler. Your anger and ignorance is showing. Calling unprovoked names places you in danger of being ignored again. Chin up.

It has another use. While not enough of one to justify its continuing as
a regulatory test, it will significantly change the Amateur Service and
not for the better when it disappears.

When you joined the fraternity with the General or Class B ticket and made
a contact, you knew something about the other guy: he cared enough to do
the code thing however silly or difficult it may have been for him just as
you had however difficult or silly it seemed at the time.
The implied level of committment to something that did not respect your
age, income, or perceived coolth but merely your time and effort tended to
create if not instant respect at least some level of tolerance and a sense
of relative importance. It is a lot easier to work with a guy that at
least a priori shows one good sign of being worthy of some trust.

It is, for example, the diff between simply giving your QTH on two meters
in a situation where it was of some importance and dinking around about it
as is common on CB. It is why I and, to his credit Leland, make no bones
about our identity. There is something incongruous about Loud and Proud

and Unidentified.

So is Morse some sort of hazing ritual? Not really, for no better reason than one does it to himself rather than having it done to him. Not like crossing the Equator or Date Line or a few other marine rituals among those who have hazing down to a science to no particular effect. It is a bar in some physical cases but mostly to those who have not made the committment. Kind of similar to why parents frown on shacking up.

I am not being critical here of you or those like you. I did my 20wpm a long time ago so I am out of the picture and I can certainly understand not wanting to be the last guy to take a code test. Today, I am not certain what I might do. But understand that when you do get on more or less for free you will have lost something not easily replaced.

>>known as an "Official Observer." You say that I am not, prove it.<
>
>
>
>I never said you weren't. Go read what I posted again. I said you
>weren't an "OFFICIAL FCC OBSERVER", like you called yourself in the
>beginning, and what you have not done since.

Wow, you're now down to arguing semantics as well as twisting my words around again. I never said that I am an "OFFICIAL FCC OBSERVER." Those are your words. I checked the entire thread back to the beginning and I never said that I am an "OFFICIAL FCC OBSERVER."

If you want the long name for what I do here it is. I am an officially certified member of the FCC Amateur Auxiliary, also known as an "Official Observer."

>>I gave you web links that explain the program in great detail but did
>>you check it out? Probably not. Or maybe you did because you certainly
>>dropped it like a hot potatoe. <

>Nothing to drop.
>You must have missed those posts or merely forgot what you read, but we
>did indeed address that issue, but you still have failed to produce what
>my main issue with you was...your lies concerning the radio busts in the
>Texas court system.

I never said that any of them were in the "Texas Court System." If I did mention a particular court, which I probably did, it's the 5th Circuit Court in Houston and San Antonio. It just so happens that they are in TEXAS but there are NOT Texas Courts. You are arguing semantics again.

>>And you apparently "forgot" that these are federal cases (which you
>>pointed out as a "flaw" in my logic). Yes, they are in Texas but not in
>>the Texas court system. The calls that I gave you never made it to court
>>anyway. <

>Exactly,as they have nothing to do with your claims concerning the court
>system, which is what I asked for. As I claimed, those calls mean
>absolutley zilch in the context of your claims. Thanks for clarifying.

So what's your problem? You are calling me a liar concerning something that I never claimed. Semantics again?

>>They received their NAL from the FCC and capitulated due to the
>>overwhelming evidence. <

>So do thousands of other hammies each year. ..BFD!

Again, so what's your problem? Where have I lied? Give a particular
instance instead of arguing semantics.

>>I also gave you four callsigns of former hams who had their licenses
>>revoked. Did you check them out? Nope. What do other kind of "proof" you
>>want? <

>Something that corroborates your claim. Posting 4 hammies that were
>popped means zilch. Were they all in the Texas court system since
>Christmas too, Kevin?

None of those made it to court, I said that already. Again, what's your
problem?

>>Nope, not in court at all. <

>So what does this have to do with your claim they were all in court due
>your efforts since Xmas? Again...nothing.

Nothing, that was your claim. I never said that they were in court. There
are others that are in court but these weren't.

>>Did I say "CBers?" Nope, the FCC's Official Observer program has no
>>jurisdiction over CB matters since there really isn't any inforcement
>>going on anyway. The only time we "bust" CBers is when they incroach on
>>ham frequencies, them we care otherwise we don't. <

>A valiant effort. I have no issue with that nor did I ever attack that
>approach.

Then why did you claim that I said I was busting CBers?

>>Then why did YOU bring it up? <

>Again, go back and check the thread, I never claimed to have busted any
>CBers. <

>You read it, Muenzler. Matter of fact,
>all you have to do is look at my original subject line above......it
>clearly says RADIO busts.

Yes YOUR subject line does say "Radio Busts." YOUR subject line is
completely inconsistent with what I said in the first place. It is a
product of your creative twisting of my words.

>>I never claimed "RADIO busts." That's YOUR twisted subject line. <

>Really? Who are all the folks you have lied about having tied up in the
>court system?
>Speeders?

Again, a product of your vivid imagination and creative twisting. I never said that I busted anyone. I am nothing more than a WITNESS that provides EVIDENCE. It's the federal martials who do the busting. My exact words went something like "I'm putting the financial hurt...." This is completely consistent with what I have said all along. I never said that I busted anyone, those are your words.

>>Just more twisy twisting and LYING! <
>
>I don't lie, Kevin. No need too. I can back what I say, and if so
>inclined, provide proof. You can not say the same.

Perhaps "lying" is too harsh of a word here. Perhaps I should have said "misrepresenting the facts," "misleading," "misquoting" or something like that. There are a few other words but I'm sure you get the picture. But it all comes down to you LIED about what I said in the first place. So even NOW with "I don't lie" you are lying.

>>I can produce post after post of your own words where you have twisted
>>my words into something that I never said.<

>But you can't post a single post lending asolute credibility, say, from
>like a government or city source...because it didn't happen. There is no
>way you can garner respect and get anyone to believe anything you say
>after your multiple lies. You make claims, then claim there can be no
>record of it anywhere unless one pays, then you claim that the judge
>asked the court to remain "mum' about the cases. More bullshit on top of
>bullshit.

Why should I? It's you who have the problem with my claims. Those callsigns I gave you never made it to court. "99%" of the NALs from the FCC don't because the evidence is so overwhelming that the person, unless he's a complete idiot, just goes along. (I don't know that the number "99%" is accurate but is for emphasis only.)

K5UJA
San Antonio TX
Malicious interference with a repeater, jamming.

WA5NOP
San Antonio TX
Malicious interference to a repeater and a net. Numerous unidentified transmissions, jamming, "sound effects."

Numerous unidentified transmissions, malicious interference to other amateurs, jamming, playing music, out of band transmissions, transmitting on unauthorized frequencies.

N5NLQ
Seguin TX
Numerous unidentified transmissions, malicious interference, jamming, playing music and other sound effects.

>>I don't remember posting anything about "nine CBers" being in the state
>>court system. <

>You didn'...I DID. That's the total in the state court systems for 2001
>relating to cb.

In what state? But then does it matter? I don't care about CBers in "state court." Hams aren't prosecuted in "state courts" if they get as far as prosecution at all. Until VERY recently state courts didn't have any jurisdiction over CBers. It wasn't until a recent law was passed giving local municipalities the authority to investigate alligations of illegal CB activities. If you do a search for hams in state court for violation of FCC rules you will find that there aren't any.

>>Like I keep saying, and you keep ignoring, the FCC doesn't deal with
>>the state court system. <

>Oh, so all your busts are now federal, hmm, ok, that makes it so much
>easier...and 27 of them are in TX that have been made to appear in court
>all since Xmas. And the judge "requests" no comment.......LMAO! "Fraid
>not. See KEvin, the federal cases are easier to track down than the
>state cases..you just keep rolling deeper in the fecal matter.

Did I ever say that 27 had appeared in court since Christmas? Nope, that was your addition to and a twisting of my words. But since you are SOOOO good at tracking, go for it.

>>Again, they are "lies" because either you don't believe what I said or
>>you don't agree with what I said. Very childish, nothing more. <

>Kevin is full of shit.

With every one of your posts you reinforce my position that you are nothing more than a childish bully.

>>Back to the empty insults, eh Twisty.
>>This doesn't mean much from someone who just cries "liar liar pants on
>>fire" and then says "prove you're not a liar." <

>Not at all. You're back to repeating yourself. You insulted me many,
>many times, lied about it and said the insults first come from me. I
>again showed you a liar concerning that, by posting a few of your many
>insults you lied about hurling.
>You're a lia,r Kevin. Deal with it.

They are not insults if they are the truth. There is a very old saying that goes something like this, "When someone says something unkind about you live your life in such a way as to prove them wrong." You are living your life to prove me right. You are nothing more than a childish bully.

>I never asked that. I merely asked for some type proof, then called you
>a liar after you became insultive.

Yep, you began name-calling to divert from the fact that you can't back up your claim that I am lying.

>>Twisting again. I made claims, you called them lies and asked for
>>proof.<

>Ahh, yes, but I didn't CALL you a liar until you began hurling insults.

Does that make a difference? "Mommy he hit me first!" That's your attitude, nothing more than a childish bully who has been challenged and can't meet the challenge.

>>Just like a typical bully, they run when they are challenged. He called
>>me a liar in "public," I challenged him to prove it and he can't.
>>Nothing more than a childish bully. I know exactly how to deal with your
>>kind.
>Kevin, WB5RUE<

>Like Frank said, ignore when the questions are too tough or make you
>uncomfortable? Yea, I can see that.

>>You haven't asked any "questions." <

>How about this? Do you have any proof that you can share with us that
>will leave no doubt what you claim? No, Muenzler, you don't, or you
>would have posted it and made 'ol Twisty dine on some crow like
>Frank has been chokingly enjoying.

I doubt that I could post anything that would satisfy you or your twisted lo gic. All you will do is pick it apart semantically, twist it around and say that you want proof that my proof is valid. So why bother. I gave you callsigns, cities and charges. Go for it. These never made it to court, federal or otherwise.

>>You called me a liar and you can't/won't prove it. Nothing more than a
>>bully. Until there is PROOF from your side this conversation is ended.
>>Kevin, WB5RUE<

>Of course it is. Like I said, it was over the day you opened your lying
>mouth and couldn't back your claims. Your insults afetr being asked to
>produce solidified your position forevermore among us. You now have the
>full backing of the AKC. Enjoy, and congratulations.

Again, give proof that I am lying. You are yet to produce a SINGLE bit of proof that I am lying to even the smallest of your accusations. All you have done is twist what I said around and then argue semantics, Homie don't play that game. The insults came after you said that I was "full of shit" and it's the insults that seem to be your focus now not whether or not I can prove my claims or you can prove your accusations.

AKC? Whatever that is. Besides your opinion of me makes no difference. An opinion is only as important as the esteem of the person holding it. I'm just waiting for you to produce proof that I am lying and you can't. So as far as I am concerned your calling me a liar and saying that I am "full of shit" is nothing more than empty air (flatulence) because it comes from a person I hold in very low esteem, a person who won't even "show his face" by giving a real name. It's easy to be a bully and/or a total ass if you are anonymous.

Kevin, WB5RUE
Just don't put a spell on me Twisty!

I understand your thoughts about the code, and respect them. I'm sure there is much truth there. You guessed it...here it comes...the inevitable "but". As a form of communication, it's only slightly more useful than semaphore. There are digital modes that will get though when code, or voice for that matter, will not. The old argument that code will get through when voice fails just doesn't hold water. It is possible, but not likely, that I could become trapped on a capsized ship, and have to resort to banging out code on the hull. In that instance, if a rescuer knows the code as well, it may be of some use.

The above being said, I do understand the right of passage. It's history, it's always been done, and probably shouldn't change. It takes all kinds and puts them all on an even playing field. But a necessary mode, it isn't.

Can't really argue with that. The first thing the Signal Corps did in 1941 was install great shitpots of Teletype machines and there was even some AFSK at VHF, superregens and all in the Pacific, one of which got my dad a bronze star from General Eichelberger (8th Army) he refused to wear but was happy for the rotation points. In developed countries it is way out of date.

But the vetting process that the code test did more or less accidentally is going to go on in some form after the test is gone. It does give you newbies two problems: first, you may not, in fact probably will not, be granted equality. And over a career, you will get to replace what currently exists for free with something else that I cannot imagine but fortunately will probably not be around to see.

Consider the sociology of CB today and you will see what I mean. I don't mean the headcases but just the mainline ops. It is a lot easier to organize anything from a beer blast to emergency comms to a national organization where there is some kind of a vetting process in place.

Hello - City Ordinance #2671, created in 1996 and numbered section
15.125 in the City Ordinance Book deals with the issue of CB radios.
I am unable to answer any of your questions regarding the history of
CB interference in Beloit. I refer you to City Attorney Richard Holm

at 364-6624. It is possible he may be able to answer your questions.

Carol S. Alexander, CMC

Subject: City Ordinance

Hello Carol,

I am doing a follow up to the information you provided Mr. "Twistedhed" re: the City Of Beloit and CB radio. Attached below is an email from you that he posted to Usenet newsgroup rec.radio.cb.

It seems there is a Senate bill on record, S. 608, introduced by Wisconsin Sen Russell Feingold some time ago. The Feingold bill had reportedly been introduced at the request of municipal authorities in Beloit, Wisconsin, who had been unable to stop illegal CBers driving Beloit residents crazy with interference. Vernon Ehlers (MI) also introduced similar legislation (HR2346) which was subsequently signed into law by Pres. Clinton.

Mr. "Twistedhed" infers that CB interference in general cannot be much of a problem since the specific city of Beloit did not even take advantage of a House Bill designed to help curb such interference. Can you comment on this? My questions to you are:

1. Was the problem in Beloit with CB interference legitimate?
2. If so, have any steps been taken to solve it?

Sincerely,

A. H. Voobner

"kenneth" mentioned marine radio in his recent post. now i dont know anybody that uses a marine radio in a "big rig", but there is a trend lately for some to use marine radio as a land based communications system. these are mostly cb-ers who use the marine band to communicate locally during those times when the skip makes it nearly impossible to talk more than a mile or two. marine rigs are inexpensive, a well featured one costing no more than 150.00 dollars.also an 18 inch long piece of coat hanger will (believe it or not) make a very effective antenna.
you can usually communicate 20-30 miles very easily with one of these rigs. a local friend of mine even converted a 2 meter beam to operate on the band,and used it to talk to a fellow in cloudcroft,nm from elpaso,tx. (well over 100 miles) pretty neat ,huh? i believe that marine radio is no longer a "licensed" band?this does not mean that the f.c.c. does not still have the athority to "regulate it".
somebody who knows...please correct me if im wrong about this. any way,just thought id throw my hat in the ring on this one....for those that may be interested.
since all the other radio services besides cb seem to be open for discussion on this cb group. :) gunslinger

Damnit. I bought the 102" whip, replaced the firestick that was on the roof of my van, and while this 102" kicks butt, it is just too long. It hits everything. Now I know I can side mount it on the side of the van, but wouldn't my SWR's go way up because some of the antenna is so close to the side body of the van? Do I just go back to a 5 ft. firestick on the roof of my van and call it a day? Man, decisions decisions. AAAARRRGGGHHHH

VHF marine radio (156 - 162MHz) is still used very much. You can't
lock-though in some places without it. Since the waterways are
controlled by US Army Corps of Engineers as well as the US Coast
Guard, no radio interference is tolerated. If you want to give all
your money to the government, then bootlegging on the marine bands is
a good way to start. If you want some jail time, do some frequency
expansion to your marine VHF radio:

There are many marine freqs (156.525, .650, .750, .800 (ch 16), etc.)
that, if abused, will land you in jail just as fast as if you had
abused CB channel 9, 2182kHz or 121.5MHz. Just as an example of how
many emergency freqs there are, I have been compiling a list of freqs
that are "off limits" even for Part 15 use:

2.1820
2.1875
4.1775
4.2075
6.2680
6.3120
8.3640
8.3765

8.4145
12.5200
12.5770
16.6950
16.8045
...etc

Ok, I cut the list short for brevity, and I probably missed a few, but you get the idea: there are lots of them. There are literally hundreds of "off-limits" freqs in the VHF band (all of the PSP channels, VHF marine and air, government, etc). Also note that VHF marine is in the same spectrum as many fire and police frequencies.

So if you want to bootleg on VHF marine, just make sure to do it loud enough that you get caught -before- you cause some very harmful interference.

I agree 100%. I think anyone operating in frequencies on which they are
not authorized should be busted.

But don't blame all the incursions into the Ham frequencies on "CBers".

... rest of rant deleted ...

I have no disagreement with what you wrote. I just am asking you to
place the blame where it is due - and not use the "wide brush" that
you have been using.

I have to agree with yeti. Seriously, the Marine band is well up the list
of priorities
for enforcement, not only with FCC, but the US Coast Guard. USCG will often
enlist the help of FCC's DF capability in Columbia, MD to find the intruder
really
quickly. The reason is that such interference CAN cause loss of life.
Anyone
interfering with emergency traffic is looking at some serious fines and even
prison.

As far as "unlicensed", there actually is no such thing. There may not be a
paper
license, but users of any radio service are compelled to abide by the rules
of that
particular service. How many CB operators actually read Part 95? Those
that
boldly intrude onto the Marine Band certainly don't read the rules governing
it,
or they might be a mite more timid about using it on land.

It's the same old cb mentality, just because they find a frequency
that no one seems to be using at the moment, then it must be OK
for their taking.

Sparky, you are backpedaling now. Regardless of what you meant to say
the meter was, you're point was that a "mere" 5 pF was not nearly
enough to drive an SWR meter. The reality is that you are wrong

and I am right. I just checked an SWR meter here. It uses a 100 uA
meter. This is sensitive enough even for 5 pF in series with a
"fixed resistor somewhere in the neighborhood of 10K."

> BUT WAIT! If your 5pF cap will give you full deflection on the meter,

Sparky, even if you had SWR meter schematics (and post them if you do),
they would not show the inductive and capacitive coupling. This
coupling is achieved by hardware within the meter; not lumped elements
like capacitors and inductors. What you say is like saying, "look at
the schematic for a magnetron." There may be a schematic symbol for
a magnetron but there is no schematic that describes it and the
operation within it.

Within the SWR meter, there is a coupling loop (and sometimes two for
forward and backward) located in proximity to the transmission line
center conductor. This loop provides both capacitive and inductive
coupling to the transmission line center conductor.

> transmission line, NOT the signal!]

You fail to see the meaning of characteristic impedance. It IS
the impedance of any signal within the transmission line; that is
why you see this impedance at the feedpoint.

Also, why do you think they stipulate that it is infinite length?
Answer: because they are eliminating any and all reflected signals.
Thus, the impedance given is the impedance of the forward signal.
Hmmm, this is exactly what I said.

> 3. The radio of voltage to current at every point along a transmission
> line on which there are no standing waves. [Gee! No standing waves!
> How about that!]

Again, no reflected signal. Thus, the impedance given is the
impedance of the forward signal. Hmmm, this is exactly what I said.

> 4. The square root of the product of the open- and short-circuit
> impedance of the line. [describing a method to measure the
> characteristic impedance of a transmission line, NOT the impedance of
> the SIGNAL.]

This is a strange one I have to think about. What if the line
were 1/4 wavelength long? This would be the square root of zero
times infinity. That doesn't work for me. What do you get?

> Now try this, "dumbass". Take a common AC plug and a piece of coax.

> of your choice (choose wisely). Now plug it in and measure the
> impedance of your new signal at any point along the transmission line.
> Does it equal 50 ohms? Not unless your terminating resistor was 50
> ohms.

Sparky, you fail to understand the concepts here. Characteristic
impedance is the ratio of electric and magnetic components of an
electromagnetic field as it propogates within a medium. Even free
space has a characterisitic impedance (377 ohms). You cannot change
that no matter how you source the signals or their reflections.

Within a coax, the electric field is virtually synonymous with
voltage and the magnetic field is virtually synonymous with current.
Maxwell's equations state the direct relationship.

To answer your question, if you were able to separate the forward
and reflected 60 Hz signals within that coax, you would indeed find
that they are propagating at the characteristic impedance of the coax.
It is because you have reflected signals that your input impedance
may not be 50 ohms. As your definitions point out above, there must
be no reflected signal in order to directly see the impedance of the
forward signal.

> So when was the last time you actually measured the characteristic
> impedance of a transmission line, "dumbass"?

I never did. I asked how YOU measured it to ensure that your
experiment was meaningful. I'm still waiting for your answer.

In my case, I buy really, really expensive cables from Gore which
they ensure will be as close to 50 ohms as you will ever find.
That's their specialty; they know how to do it better than anyone.

> >> >Now an example for the slow thinkers out there:

> physical characteristics.

So, you are saying 'flat' transmission line = "non-reactive transmission
line"? Is that correct? Do you consider "flat" to mean absense
of standing waves? I'm still not sure what you are saying here.

Regardless of what that all means, consider a 50 input impedance.
I think this qualifies as "non-reactive." How is it possible, as
you claim, that voltage and current are out of phase? That doesn't
jibe with Ohm's Law. I guess we now have Sparky's law:

E = -I * Z

> >The fact of the matter is that forward voltage is ALWAYS IN PHASE with
> >the forward current.
>
> Just to clear up any possible misunderstanding, are you saying that
> the point of highest potential is also the point of highest current?
> And this condition exists along what is effectively a series-network
> of pi circuits?

No. I am saying:

Ef = If * Zc
Er = Ir * Zc (looking backward) (negate Ir if looking forward)

where:
Ef = Forward signal voltage
If = Forward signal current
Er = Reflected signal voltage

Ir = Reflected signal current
Zc = characteristic impedance of transmission line

Also, the voltage at any point is:
E = Ef + Er

The current at any point is:
I = If - Ir

Also, the point of highest potential will be the point of lowest current.

> > The only time the current can be out of phase
> >with the voltage is when there is a reflected signal summing with
> >the forward signal -- and it doesn't take a genius to know that a
> >reflected signal does not consist of a forward voltage or current.
>
> Now you are starting to get the hang of it!

This contradicts what you said and you are praising me for it.
You said "they are 180 degrees out of phase for a non-reactive
transmission line." Isn't a transmission line with no reflections
"non-reactive?"

> >> I'm sorry, CLP, but it appears the concept of electromagnetic

>
> You don't need pontoons to tell which direction the wave is coming
> from, and you don't need caps to compliment an inductive link. Like I
> said, it's basic electromagnetics, DUMBASS!

Hee hee! It figures you would give a non-applicable analogy. You don't get TWO pontoons with your SWR meter; you get one. And it goes up and donw in place and that is it. There is no way to determine wave direction with that.

If you disassemble your SWR meter, you will find ONE loop for each measurement. Some meters provide two: one for the forward measurement and one for the reflected measurement. But they never use two simultaneously as your analogy requires. In terms of measuring current, all these loops can do is measure the sum total of forward and reflected current. No directional determination can be made solely from that information.

Also, how can you conclude that the potential is strictly from induction and not partially from capacitive coupling?
Furthermore, how can you compare an induced voltage to ground when such a voltage would be independent of ground (ever hear of an isolation transformer). The only component which is not independent from ground is the voltage. Hmmm, this seems to jibe with the way I claim it works; not your way.

[stuff not even worth explaining for the tenth time to Sparky snipped]

> Tell ya what: study my boat analogy for a while, then explain why YOU
> think that both voltage and current need to be measured to determine
> the direction of power.

I already explained why your analogy is incorrect. You don't get two sample points; you only get one. Now, I'll give you a more accurate analogy. You have a single pontoon for measuring wave height with a little propeller for simultaneously measuring current. These two measurements are summed together and detected with the equivalent of analog circuitry.

A forward wave will have the following characteristics:
Positve wave with positive current or
Negative wave with negative current.

A reflected wave will have the following characteristics:
Positive wave with negative current or
Negative wave with positive current.

Also, the characteristic impedance of the water medium is known.
Thus, there is a known relationship between the forward potential
and the forward current. Any deviation from this relationship
signifies the presence of some reverse wave.

Also, the device is designed such that the contribution of the
forward wave potential is equal to the contribution of the
forward wave current (this feature takes into account the
characteristic impedance of the medium). In this way, a reverse
wave contributes a positive unit for its wave component but a
negative unit for its current component. Thus, a reverse wave
cancels out and does not contribute to the reading. Thus, the
reading is directional; it only measures forward waves.

> freq at twice the magnitude,

Yes, but it is not distorted; it is still a sine wave.

> or I can shift it so both signals cancel and I get a flat line,

Yes, that is the noninteresting result (kind of like multiplying
by zero). What you get is a sine wave of amplitude zero -- still
no distortion.

> or I can shift it so I get a double-humped sine wave.

You absolutely, positively cannot do this by adding two sine waves
of the same frequency, dumbass. Show us how or forever be the
newsgroup dumbass.

Give us the math for the two sine waves being added.
Show us graphically.
Show us any way you can.

You cannot.

> >> What? Are you going to say that power meters can read

> the PRODUCT of the voltage and current? And what is your "passive
> analog circuitry"? The whole wattmeter is "passive analog circuitry",
> even the diode! You don't even know what you are talking about,
> "dumbass"!

Of course, it doesn't make sense to you. Sparky, you just don't
get it. You don't understand.

Yes, the whole wattmeter is passive analog circuitry. How are you
measuring current 27 million times per second? The answer is
trivial and you still don't see it. It is a piece of cake to
sum signals at any frequency. Then, you have the trivial task
of detecting the summed voltages.

By knowing the characterisitic impedance, there is a direct
correlation between a forward/reverse voltage measurement and power,
between a forward/reverse current measurement and power.
A voltage measurement at one point only allows measuring the sum of
the forward and reflected voltages. A current measurement at
one point only allows measuring the sum of the forward and
reflected currents. You need a way to separate the two.

Addend 1 = Vf
Addend 2 = If = Vf/Zc
Addend 3 = Vr
Addend 4 = -Ir = -Vr/Zc

All four signals are summed together using a constant coefficient of
coupling K.

Vtotal = Vf + (K * If) + Vr - (K * Ir)

The bridge is designed for a proper coupling coefficient based on
the desired operating characteristic impedance. Thus K = Zc

Substituting, we get:

Vtotal = Vf + (Zc * Vf/Zc) + Vr - (Zc * Vr/Zc)

Simplifying, we get:

Vtotal = Vf + Vf + Vr - Vr

Simplifying further we get:
Vtotal = 2 * Vf

As pointed out before, since the characteristic impedance is known,
we now have enough information to determine the forward power Vf^2/Zc.
Since there is a direct mapping between Vtotal and the actual power,
this square function is built into the meter scale. You will notice
that your meter does not have a linear scale.

I gave an analogy. I showed the math. I showed the problems with your
claims. 'Nuff said. Case closed.

679. AntiKeyclown Gift Shop NOW OPEN

Hee hee. I guess it depends on what the meaning of "of" is.

[snip]

> Basic transmission line physics. Start with page 501... oops, I

Yeah, you can give page numbers -- but none that contain what you
claim the book says.

> <snip even MORE whining and MORE excuses....>

I know. It's the vast right wing conspiracy. There is no "there"
there. Right?

>
> So do you still have the book?

The book is in the library. I have photocopies of all the sections you referenced. What difference does it make if I posess the book or not? A quick review of the thread referenced will show that you could not provide any correct page number or direct evidence that the book says what you claimed it said. It just wasn't there. You lied and it is abundantly evident.

Why are you not able to provide a correct page number of the book you reference? I think this question is more pertinent that whether or not I have the book now.

Ha! Double-humped waves!!!??? There is no such thing in this context.
The current at a current null is zero, nada, nothing! You cannot
measure it with an inductive probe. It is a sine wave with
amplitude zero. it is not even relevant if it is a function "over"
time or "of" time -- I'm not even going to get into this nonsense.

Furthermore, I challenged you in the last response to show how the
sum of two sine waves of the same frequency produces a "double-humped"
wave. I am really looking forward to your answer.

Transmission line transformers work by providing a reflected signal
at the coax interface that is equal and opposite to the signal that
is reflected at the interface in the absence of this reflected
signal. Thus, the net reflected signal is zero. The forward and
reflected signals within the transformer still maintain a V/I
relationship equal to the characteristic impedance of the coax.

It is VERY relevant if it is a function 'over' time, since it is the
function 'over' time that you are measuring. If you want to measure
the function 'of' time you need a pretty fast scope.

>Furthermore, I challenged you in the last response to show how the

1. Quote?

2. "Transmission line transformers work by providing a reflected
signal at the coax interface that is equal and opposite to the signal
that is reflected at the interface in the absence of this reflected
signal", which is saying that when there is no reflection, the
non-existant reflected signal is totally de-phased by it's own
reflection. That's the BIGGEST pile of BS on this newsgroup YET!!!

3. Once again, how does a transmission line transformer work? No more
BS, provide a VALID explanation!

>
> But don't blame all the incursions into the Ham frequencies on "CBers".

You're basically arguing semantics. Technically anyone, who isn't
operating on the assigned 40 channels, is not a "CBer". Since there is
no license or certificate of authorization giving a "CBer" license to
operate, there is no real "claim" to that chunk of spectrum or operating
privileges. When you run on an unauthorized frequency, you are
technically just a "bootlegger".

This is where hams are at a disadvantage. If a "CBer" chooses to become
a "freebander", he is no longer considered a "CBer", and would be
prosecuted as a someone operating on an unauthorized frequency. If said
"CBer's" buddy, who also happens to be a ham, decides to join his freind
for a QSO on 27.555, he is now a ham operating out of band, and stands
to lose his license along with other fines.

A ham, who runs on the freeband, has more to lose than a regular
citizen, who has no license.

> this cb group. :)

Ah yes, that ever-present search for "secret channel XYZ". I can
remember seeking an "alternate" channel, or band that mambers of our
group could slip away to to discuss "things" that we didn't want put out
over the regular CB channels. First we tried wireless intercoms (Only
good if you were next door neighbors), then 49 Mhz, when it became
legal, then marine band, itinerant business channels (which have been
reallocated to MURS).

The marine band is on 156-157 Mhz. Marine radios are 25 watts. As such,
you can expect range similar to 2 meter ham rigs. VHF is line of sight
and if you are on flat land, with a high enough antenna you can get over
25 miles or more. If you are in hilly areas, the range will be far less.

Now for the bad news. The marine band is ONLY authorized for use by a
vessel at sea (Sea meaning navigable waterways). In the US, recreational
boats no longer need a station license, but the FCC still expects all
rules to be followed. The few authorized land stations still require a
special license. If you want a land station license, it is a difficult
procedure, and you must be affiliated with some marine activity (Marina,
tow boat service, etc.). Technically it is illegal for you to use the
marine band radio in your boat, if the boat is no longer in the water,
or to use a handheld to signal your boat from the dock. The marine band
is monitored by the Coast Guard in coastal areas, who have been known to

track down illegal operators with the same DF equipment they use to find stranded boaters in search and rescue operations. While they usually only get nasty when people call false "Maydays", they have been known to interviene during more "casual" uses.

Realistically, if you live near a large body of navigable water, you run a risk of discovery if you bootleg on the marine band. On the other hand, it's rather obvious that you're not a legitimate marine user if you're heard in bumfutch Kansas, but the likelyhood that someone would be monitoring is far less. I live about 40 miles from the closest coastal marine area, and I can still hear Coast Guard bulletins on channel 22a. The marine channels are also under a strict usage bandplan. Not all channels are available for chit-chat. In fact only channels 68, 69, 71, 72, and 78a are available for non-commercial use.

If I had my druthers, I'd rather operate on MURS. Far less chances of serious legal problems, and if you keep the radios to type accepted units, you are perfectly legal.

Let's see, how did this all begin?

Twisty boy made a false claim of something that I "said." I never said that I made 27 busts this year. To make it perfectly clear (said in a Nixon voice) I was a "witness" gathering evidence in various ways that has caused NALs (Notice of Apparent Liability) to have been served on 27 individuals. Of those some have simply "plead guilty" and have done what the FCC had demanded. This has ranged form suspension of license for some period of time to reduction in license class to levying of fines to complete loss of license and fines. No, Twisty, I'm not backpedaling. What I am intending to do is bring back into focus what I actually said and what I meant after you twisted it around to say something that I didn't. I don't believe I ever said that they are all in court or have all been prosecuted. In fact I KNOW that I never said that. This is Twisty's assumption and twisting of my words. All of his claims that I am lying began with one of his own lies, misstatements, half-truths, misquotes, misrepresentation of the facts, intentional fabrications, hooey, whatever he wants to call it -- it was a lie. So have all of his other accusations against me. They start with him twisting what I said around so that he is correct in saying that is isn't true. But if you look back on what I actually said it doesn't come close to the MEANING of what Twisty has put into it.

I learned many years ago that it is impossible to win a debate or argument with a fool. Like a fool Twisty's logic changes from post to post just as his accusations do. As I punch holes in them he changes. One of his tactics is what is called "tit for tat" which is nothing more than saying, "Well, what about you?" and "I asked you first." This will cause you to lose a debate. His latest claim is that I claimed to be an "OFFICIAL FCC OBSERVER." I never said that. I explained this in another post and am waiting to see what creative answer he can come up with this time. Of course, Twisty, there is a big advantage to being anonymous, you can say what you want, make whatever claims you want and you don't have to be accountable for any of them.

>Ok, "poor sap" I'm still waiting for any "backing" you can produce.
Just don't cast any spells on me!
Kevin, WB5RUE<

As of today, I received 2 more emails from regs on the group that have confirmed your lies and guess what? One is also member of the ARRL..
Keep waiting....I'm not the least bit concerned what you choose to believe. Your're chopped liver, Kevin, and no one believes your story, I don't even think George believes you at this point. Matter of fact, none of them probably believe you based on their failed but repeated attempts to change the subject.
Your constant child-like taunting and bickering meshes well with your new found and enjoyed company. Like Aaron said.. you can't produce a single example anywhere tying you in with 27 radio villains in the court system .....shoulder the burden.

From: wb5rue@yahoo.com (Kevin Muenzler, WB5RUE)
>Yes I've noticed this. He's down to arguing semantics and trying to
argue with words I never said.
Kevin, WB5RUE<

The try noticing what is put in front of you. You claimed you had a hand in 27 folks being tied up in the FEDERAL court system since Xmas, showing for absolute certain you have no clue what the court system entails, let alone a time frame that is impossible to have in the courts that soon...and all in Texas...mmmmph!.

Source record: 129730

>If you want the long name for what I do here it is. I am an officially certified member of the FCC Amateur Auxiliary, also known as an "Official Observer." <

Ahh, yes...this is quite different from what you first referred to yourself as..."Official FCC observer." Glad to see you realize your err and have now corrected it.

>I gave you web links that explain the program in great detail but did you check it out? Probably not. Or maybe you did because you certainly dropped it like a hot potatoe. <

Nothing to drop.
You must have missed those posts or merely forgot what you read, but we did indeed address that issue, but you still have failed to produce what my main issue with you was...your lies concerning the radio busts in the a FEDERAL court in Texas.

>I never said that any of them were in the "Texas Court System." If I did mention a particular court, which I probably did, it's the 5th Circuit Court in Houston and San Antonio. It just so happens that they are in TEXAS but there are NOT Texas Courts. You are arguing semantics again. <

Wow Kvin, you really enjoy repeatng yourself. Most hammies like youself also enjoy hearing themself talk.....we know the type. You really go nutover wording. Bottom line....you can't produce anything concerning 27 people you were allegedly involved with getting into the court system.

>And you apparently "forgot" that these are federal cases (which you pointed out as a "flaw" in my logic). Yes, they are in Texas but not in the Texas court system. The calls that I gave you never made it to court anyway. <

Exactly,as they have nothing to do with your claims concerning the court system, which is what I asked for. As I claimed, those calls mean absolutley zilch in the context of your claims. Thanks for clarifying.

>So what's your problem? You are calling me a liar concerning something that I never claimed. <

I was wondering your problem. I ask for something to back your fluff and you post something self-admittedly that has nothing to do with anything you claimed.

>Semantics again?<

Actually, I would refer to that move you pulled as a poor-assed attempt at obfuscation. It's the only reason you posted it, as it has nthing to do with anything you have set forward.

>They received their NAL from the FCC and capitulated due to the overwhelming evidence. <

So do thousands of other hammies each year. ..BFD!

>Again, so what's your problem? Where have I lied? Give a particular instance instead of arguing semantics. <

Sure. You claimed 27 hammies in the court system since Xmas, and claimed your efforts helped put them there. Your words, no semantics,,,just lies.

>I also gave you four callsigns of former hams who had their licenses revoked. Did you check them out? Nope. What do other kind of "proof" you want? <

Something that corroborates your claim. Posting 4 hammies that were popped means zilch. Were they all in the Texas court system since Christmas too, Kevin?

>None of those made it to court, I said that already. Again, what's your problem?
Nope, not in court at all. <

So what does this have to do with your claim they were all in court due your efforts since Xmas? Again...nothing.

>Nothing, that was your claim. I never said that they were in court. There are others that are in court but these weren't. <

So why did you post them?

>Did I say "CBers?" Nope, the FCC's Official Observer program has no jurisdiction over CB matters since there really isn't any inforcement going on anyway. The only time we "bust" CBers is when they incroach on ham frequencies, them we care otherwise we don't. <
A valiant effort. I have no issue with that nor did I ever attack that approach.

>Then why did you claim that I said I was busting CBers?
Then why did YOU bring it up? <Again, go back and check the thread, I never claimed to have busted any CBers. <

You read it, Muenzler. Matter of fact,
all you have to do is look at my original subject line above......it clearly says RADIO busts.

>Yes YOUR subject line does say "Radio Busts." YOUR subject line is completely inconsistent with what I said in the first place. It is a product of your creative twisting of my words.
I never claimed "RADIO busts." That's YOUR twisted subject line. <

Really? Who are all the folks you have lied about having tied up in the court system?
Speeders?

>Again, a product of your vivid imagination and creative twisting. I never said that I busted anyone. I am nothing more than a WITNESS that provides EVIDENCE. It's the federal martials who do the busting. <

heheh...I knew damn good and well your lies would come to a head. Federal Marshalls now are involved busting cb and hammies?

>My exact words went something like "I'm putting the financial hurt...." This is completely consistent with what I have said all along. I never said that I busted anyone, those are your words.<

Well, I need show nothing, as you just did it all for me..couple your lies concerning your grandiose claims and intentionally misleading title you referred to yourself as (since you.have then dropped like a hot potato) with the other lies concerning insults you hurled then lied about, saying they came your way first, and an entire pattern of lies are manifested, but I do like the one concerning the judge in what is now a FEDERAL court, REQUESTING silence on all 27 cases. If it wasn't all 27, then how many? And since youclaimed you may have to testify, why were you in court before they called you?. I mean, you MUST have been in court to have heard this "request" by the judge you claimwas given. But what doesn't add up here, is winesses are not permitted to sit throughout a federal trial (it IS a trial, right Kevin?) and enter to take the stand ONLY when called, which means you would not be privy to the rest of the pertinent details of the case and would have no clue the judge comments concerning privacy, which never took place anyway.
Or were all 27 mere arraignments on behalf of the Federal MArshals (ROAR!)?)
As I said we need only sit back and you'll muck yourself, as do all of you malcontents.....federal marshalls......LMFAO! You go, Kevin, far be it from me to take away your delusional lies.
You really screwed up, Kev 'ol boy..US marshals involved with cb/radio interference indeed.....hehe...and Oh, Kevin,,,just for kicks...the FCC has no cases pending requiring appearances in federal court at this time concerning cbers/hammies. This was affirmed by the FCC's PR spokesperson (if you can't find that info..it is available for a fee). 2 cases were just given dispositions and neither were in Texas.

From: wb5rue@yahoo.com (Kevin Muenzler, WB5RUE)
>Let's see, how did this all begin? <

You made a false claim, I asked for proof, you went beserk and began with insults. That was your first mistake.

>Twisty boy<

And your attempted deference and remedial insults that apparently stroke your ego, such as referring to another you do not agree with as "boy", for no other reason other than your poor communication skills coming into play, are self-descriptive of all I have claimed of you. Carry on....

> made a false claim of something that I "said." I never said that I made 27 busts this year. To make it perfectly clear (said in a Nixon voice) I was a "witness" gathering evidence in various ways that has caused NALs (Notice of Apparent Liability) to have been served on 27 individuals. Of those some have simply "plead guilty" and have done what the FCC had demanded. This has ranged form suspension of license for some period of time to reduction in license class to levying of fines to complete loss of license and fines. No, Twisty, I'm not backpedaling. What I am intending to do is bring back into focus what I actually said and what I meant after you twisted it around to say something that I didn't. I don't believe I ever said that they are all in court or have all been<

More lies is what happens when you forget the lies told before. You can't keep them straight. You indeed said they were ALL in court, since Xmas, no less. Keep talking......

>This is where hams are at a disadvantage. If a "CBer" chooses to become a "freebander", he is no longer considered a "CBer", and would be prosecuted as a someone operating on an unauthorized frequency. If said "CBer's" buddy, who also happens to be a ham, decides to join his freind for a QSO on 27.555, he is now a ham operating out of band, and stands to lose his license along with other fines.
A ham, who runs on the freeband, has more to lose than a regular citizen, who has no license.
Dave
"Sandbagger"<

And is the reason certain semi-new hammies have become so touchy and anally retentive. Thye can no longer participate where they used to, they can only listen in on the fun, for fear their voice may be recognized. They miss the wide open true grit found on the freeband, the sense of NOT knowing who you will contact next, as opposed to hammies at least having a sense of who may be on the bands by virtue of frequency and allowed allocation. But most of all, the angriest, appear to be the dx-friendly hammies, who remain at the nocode level and are in the limbo zone,,they're damned if they do and damned if they don't. If they don't upgrade, they'd be better off letting their license expire.

Hello RUSTYAMERI:

Yeah sure your hitting all kinds of low lying things, but this is how it supposed to be. I would just let it be, you'll get you to it. I have a Francis Amazer 96 inch fiberglass whip antenna on top of my 1977 Ford 4x4, Hi-Boy truck, it kicks ass. Yeah suuure the sound of the whip antenna hitting the low lying objects is deathening in the cab, but women will adore you.

I am sure this has helped.

Jay ...there probably isn't much in the way of low hanging objects in the Mojave is there?????? Not many women either?????hehehe just kidding..... the 102 inch whip the greatest invention of all time but to mount it that high can be a burdon??? to move or not to move that is the question..... Well the answer is answered witha question....??? is the whip steel or fiberglass??? fiberglass will disinegrate after being hit so much the steel will just bend a bit after time!!!!!!!

You can use a 8" Francis, a 7' Firestik, or one of the 5' Terminator
type antennas. They all work as well as the 102" SS whip.

>I maintained.

No law dealing with CB radios? Then why did she reply:

> Hello - City Ordinance #2671, created in 1996 and numbered section
> 15.125 in the City Ordinance Book deals with the issue of CB radios.

(And mind you, I posted all the headers from her email)

I think you truly have gone off the deep end this time. Perhaps a
better analogy is that you've been caught in the riptide and are going
down for the 3rd time. You've run out of factual argument and all you
have left is derision and schoolyard taunts. In all my time on the
newsgroup I've never seen anything like it: Kevin Muenzler has you
hissing like a cornered possum. Why else would you be in here trying
to deny that Beloit has City Ordinances dealing with CB?

PS: You could use a beach hat.

you can side mount it about 3 feet down from the roof line without seriously affecting the s.w.r. this would give you alot of height clearance,and still leave most of the radiating portion of the antenna above the roof. ive got a 102" stainless whip,lenghtened to 109" by virtue of a heavy-duty spring and 3" piece of all thread ,mounted to the bumper of my bronco II.utilizing a thick 6" long piece of flat aluminum bar stock,i attached the antenna to one end,and the other to the rear bumper,giving me about an 8" stand off from the rear hatch. this leaves about 6' of whip above the roof line.im using 12.5 feet of mini-8 coax. my s.w.r. is 1.5 or below between 25-27mhz. so it can be done. you may have to experment a little to get it right for your application. hope this helps

Put down the CB mic and step away from the kicker...

Those of you who run CB amplifiers, or "kickers," listen up: local cops can now bust you under a federal law enacted last week.

The proposal for the law had been -- excuse me -- kicking around for a while. The FCC has had many complaints about steroidal CBs bleeding over into other broadcast signals, such as radio and TV, cordless phones and PA systems in buildings.

I recall being at a friend's funeral a few years back when, at a solemn moment of what was supposed to be silence, some yo-yo came in loud and clear complaining about coming to a dead stop in a traffic tie-up. How appropriate...

The federal law only authorizes local governments to put together their own ordinances for enforcing FCC rules. Then it's up to a community to make its laws, and up to the local cops to decide if they have nothing better to do than check your wattage.

And that, as we can guess, may depend on how they feel about truckers and trucks...or if the speeding fines aren't coming in on target. Or if you happen to live too close to the chief's house and are making comments about his ancestry and private habits.

I'm sure this law will be challenged in court and probably should be, as it seems wide-open to official abuse. On the local level, though, I'd think it would be hard to go before the town council and argue against passing an ordinance, since the purpose of the amplifiers is to make the CB signal stronger than legally allowed. What, you're going to tell the council you want to own a kicker but not use it?

This is also a question for the lawyers, but I wonder if that law could be extended to cover "Roger beeps" and other annoying CB noises? Wanna bet it can't?

Anyway, those of us who don't use kickers would just like to thank you for bringing this to pass. It's another fine mess, Stanley...

Of course, keyclowns are free to make up all kinds of stories to CafePress about how I'm infringing on this or that. Below is the policy for filing complaints. I think #4 is going to stop most of the troublemakers cold :)

-A

If you believe that your intellectual property rights have been infringed by a user of our service, please provide our Intellectual Property Rights Agent with a notification that contains the following information:

1. A physical or electronic signature of a person authorized to act on behalf of the owner of the copyright or other rights that have been allegedly infringed.
2. Identification of the copyright or other rights that have been allegedly infringed.

3. The URL used in connection with the sale of the allegedly infringing merchandise.

4. ****Your name, address, telephone number and email address.

5. A statement that you have a good-faith belief that use of the material in the manner complained of is not authorized by the rights owner, its agent or the law.

6. A statement that the information in the notification is accurate and, under penalty of perjury, that you are authorized to act on behalf of the owner of the copyright or other right that is allegedly infringed.

Trucks and CB radio have been together since the hard times of the 70's. The truckers strick in the early 1970's got CB radio its start. Now as far as the FCC is concered why bother? They ain't going to do shit if you follow a few operating standers. Here is a tip for all you regular CB radio operators as well as the freebanders (Megahertz muchers is what they really are) Stay below 28.000 MHz. Best tip I can give you. Stay far away from 24.990 MHz and you shouldn't have any problems. The FCC in my opinion isn't going to do anything if you run a clean station. Hey you truck drivers this goes for you. If you start shutting peoples motors (Computers in todays engins have RFI problems)You will also have problems with the FCC and the local police who can stop you if they beleive you are running illeagal radio equipment and take it and give you a ticket. So clean it up. The best thing that could happen to trukers and CB is that they seperate for ever. Hey Trukers have you heard of the FRS. THe perfect spot for trukers.

Thanks Scott, I completely FORGOT to mark up the tote bag. What do you think a good price would be? I could add on $4 and I bet it'd still sell. That tote bag is gonna be a big hit at the next DAYTON HAMVENTION. You know it's too bad you're a keyclown because I give discounts to AKC's. You could have saved yourself a buck or two.

argue with words I never said.
Kevin, WB5RUE<

The try noticing what is put in front of you. You claimed you had a hand in 27 folks being tied up in the FEDERAL court system since Xmas, showing for absolute certain you have no clue what the court system entails, let alone a time frame that is impossible to have in the courts that soon...and all in Texas...mmmmph!.

> and have now corrected it.

BZZZT! Wrong. I never said "Official FCC observer." That statement is a
product of your imagination.

> >I gave you web links that explain the program in great detail but did

> a FEDERAL court in Texas.

BZZT! Strike two. I never claimed a single bust. Again, a product of your
imagination.

> >I never said that any of them were in the "Texas Court System." If I
> did mention a particular court, which I probably did, it's the 5th

>
> Sure. You claimed 27 hammies in the court system since Xmas, and claimed
> your efforts helped put them there. Your words, no semantics,,,just
> lies.

I believe my words went something like this, they are either on their way TO
court, in court or through court. I never said that there were 27 IN court.
There is a big difference. How long do you think it takes to try a federal
case with overwhelming evidence anyway? Though I've never been called to
witness personally in any of the cases in which I've provided evidence the
longest one that I can remember only took a couple of days. Think of it
this way. Let's say that I have a video of you comitting a crime. The
video shows without any shadow of a doubt that it's you. How long do you

think the trial would take? IF and that's a very big IF these cases ever go to court the evidence is so overwhelming that there really is no defence.

> >I also gave you four callsigns of former hams who had their licenses

They did--it's called MURS and FRS! Seriously, answer me this: How can they
"open up" frequencies they have no control of? That's the problem. Much of
that
spectrum on either side of 27 MHZ is governed by an agency called NTIA
(National Telecommunications and Information Agency)--an even more powerful
agency than FCC that controls US government use of radio. Without some
major
shuffling around, there simply ISN'T anywhere for 27 MHZ CB to go. Nobody
said CB hasn't become a hobby; it is just contrary to the intent and purpose
of CB,
that's all.

I know. N8 is a controversial figure in the organization and many are not completely comfortable with his hardline stance, yet there IS some demand for N8-oriented AKC merchandise as well. We are in negotiations now with the design team as well as N8's people. Since all profits go to fund reseach into a cure for keyclowns, I can't see what harm it would do to pursue things. The Anti-Freeband line is soon to be expanded as well. The sky's the limit! Thanks for your support.

We're coming, we're coming, our brave little band
On the right side of temprance we do take our stand
We don't use tobacco, because we do think
that the people who use it are likely to drink

(Chorus)
Away, Away with rum, by gum
rum by gum, rum by gum
Away, Away with rum by gum
The song of the Temperance Union

We never eat peaches because they ferment
And a peach will ferment at the least little dent
Oh can you imagine a sight more obscene
Than a man getting tipsy on peaches and cream

Chorus

Oh come on, Dick. Just look at that merchandise! It's awesome. How
could you think that AKC's don't drink, party, rock and roll or have a
good time? We just don't break the law and brag about it in NG's...
that's the difference between AKC and criminal keyclowns.

I think some people think that if they CLICK on an item they have to
buy it, LOL, or somehow we get their IP number, LOL. Nothing of the
sort. CLICK on some of those items and you'll get further
descriptions, that's all. Just some harmless and COMPLETLY LEGAL
CB-related stuff for sale.

Well, you have some real input in the thread. FYI - the strategy of the FCC is this - #1 - protect Air Force One communications. #2, protect civil defense frequencies (police, fire, etc.- maybe after critical governemt communications, but inclueded herein) #3, protect various safety frequencies (which would include marine frequencies). We can argue CB and amateur all day with nothing gained. Screw around with marine frequencies and you very well may get to regret that messing with those frequencies. After the above, money talks. Don't try FM broadcasting. Commercial interests may be rated #4. They will be enforced. Forget about CB. Then again, go back to the first 3. You will not pass go, you will not collect $200. That is a fact. Yes, CB and amateur will be enforced to a minor point, but they rate far below the ones I mentioned earlier. Then again, mess with Air Force One and the FCC may well be the LEAST of your worries.

Possibly. But I do not consider the bootlegger to be a CBer unless they
operate on the CB band at least part of the time.

Many of those that were busted were using Ham gear on Ham frequencies.
It is unlikely that they ever operated on CB frequencies.

I prefer to call anyone who operates out of band a bootlegger, and not
tack on Ham or CBer.

> This is where hams are at a disadvantage. If a "CBer" chooses to become

> to lose his license along with other fines.

I would consider them both to be bootleggers - irregardless of whether
they were operating "up" from the CB band or "down" from 10 meters.

In the FCC enforcements, it appears that cites are often for "CBers
operating out of band" or "Amateur operating out of band". So if my
memory is correct, the FCC does not automatically "no longer consider
a person a CBer" when they operate out of band.

> A ham, who runs on the freeband, has more to lose than a regular
> citizen, who has no license.

Correct. To balance that inequity, the Ham has far more freedom to choose
bands of operation, frequencies within those bands, modes of operation,
legal power limits etc.

Why a licensed Ham would operate out of band - with so much to lose, is
something I cannot understand.

Of course. The AKC has many resources, graphic designers, writers,
programmers, web access specialists, countermeasures specialists,
photo analysts, etc. Very different from the poor keyclowns who are
limping along and handicapped from the get-go. Your spoof actually
wasn't half bad. It makes me wonder how come you're with the keyclowns
instead of the AKC. You could be on the winning team if you wanted to.
Ever considered flipping over to our side?

764. Remember "All Ears" - Songs about the CB Radio?

Newsgroup: rec.radio.cb
Date: 2002-07-10 07:45:43 UTC
From: Terry & Utahna Olsen <tolsen64@nospam.boycot.dns2go.com>

Source record: 129793

I used to have an LP called "All Ears" that was sold by Radio Shack way back when I was a small kid. It had a variety of CB songs on it such as:

Hey Shirley, This is Squirley
Everybody is Somebody (In our CB World)
L.J.'s CB Radio

Those are the three songs I remember most. Does anyone remember this? Or better yet, does anyone still have this album? I'd sure like to have a copy of it.

Thanks,
Terry
Old Time CB'er.

765. CLP hasn't measured squat!

>Within the SWR meter, there is a coupling loop (and sometimes two for
>forward and backward) located in proximity to the transmission line
>center conductor.

Hey, here's a book you might have or can probably find at your local
library: "Master Handbook of 1001 Practical Electronic Circuits" from
TAB Books, 1977. It has no less than a dozen power/SWR meter circuits,
and ALL of them include the coupling. The best one is on page 314,
which is a diagram of the construction details of the coupling that is
used in the tuner/meter schematic on page 315. It actually uses two
seperate pickup wires, one for forward power and one for reflected
power. And no caps. I flip back a page and there's another SWR meter
circuit, this one using a toroid transformer for the inductive
coupling. And yet another circuit just a few pages away has the
inductive link as a piece of wire shoved inside a section of coax.

> This loop provides both capacitive and inductive
>coupling to the transmission line center conductor.

Capacitive coupling certainly exists between two short parallel wires,
but in the function of these circuits it's value is insignificant.
Even if you twist the wires together tightly you are going to get only
a couple picofarads (ever hear of a 'gimmick' capacitor?) Most pickup
wires are spaced far enough away from the power-carrying conductor as
to provide negligible capacitive coupling (it's intentional because
too much capacitive coupling skews the readings... hmmm... didn't I
say THAT before?)

>> >[More of Sparky's non-responsive ramblings snipped]

>> Characteristic impedance:
>>
>> 1. The driving-point impedance of a line if it were of infinite
>> length. [it doesn't say 'the impedance of the signal at the
>> driving-point', does it? It's talking about a characteristic of the
>> transmission line, NOT the signal!]
>
>You fail to see the meaning of characteristic impedance. It IS
>the impedance of any signal within the transmission line; that is

>why you see this impedance at the feedpoint.

No, you have still failed to measure the characteristic impedance of a transmission line. The impedance at the input of a FINITE transmission line changes according to the load impedance at the other end of the line.

>Also, why do you think they stipulate that it is infinite length?
>Answer: because they are eliminating any and all reflected signals.

Wrong: For a line of infinite length, all the power is dissipated by the line. Therefore, the line IS the load, and the charateristic impedance becomes the load impedance.

>Thus, the impedance given is the impedance of the forward signal.
>Hmmm, this is exactly what I said.

Yes, you said it, and you are wrong again. As I said before, the input impedance of a line changes according to the load impedance at the other end. Test it yourself... oh, that's right, you don't like to do any hand's-on experimentation for fear of being proven wrong...

>> 3. The radio of voltage to current at every point along a transmission
>> line on which there are no standing waves. [Gee! No standing waves!
>> How about that!]
>
>Again, no reflected signal. Thus, the impedance given is the
>impedance of the forward signal. Hmmm, this is exactly what I said.

If there are no standing waves then the source and load impedances are equal to the characteristic impedance of the line. What is being measured is the ratio of voltage to current at every point along the length WHEN (while the condition exists that) there are no standing waves on the line. It says nothing about the ratio of voltage to current on a transmission line WITH standing waves, does it?

>> 4. The square root of the product of the open- and short-circuit
>> impedance of the line. [describing a method to measure the
>> characteristic impedance of a transmission line, NOT the impedance of
>> the SIGNAL.]
>
>This is a strange one I have to think about.

If you have to think about it then you have never measured the characteristic impedance of a transmission line. Try this: go to the BAMA site and download the manual for an impedance bridge (Heathkit AM-1, Knight Z-bridge, etc), and read it.

> What if the line
>were 1/4 wavelength long? This would be the square root of zero
>times infinity. That doesn't work for me. What do you get?

Is this a super-conductive transmission line that you can get zero ohms impedance? Have you ever measured infinity? Don't be a dumbshit.

>> Now try this, "dumbass". Take a common AC plug and a piece of coax.

>Sparky, you fail to understand the concepts here. Characteristic
>impedance is the ratio of electric and magnetic components of an
>electromagnetic field as it propogates within a medium. Even free
>space has a characterisitic impedance (377 ohms). You cannot change
>that no matter how you source the signals or their reflections.

First, you are contradicting yourself. You say that characteristic impedance is the impedance of a signal, but then you say that the characteristic impedance of free space (which is not a signal) is 377 ohms. Only one of those statements is true, and it ain't the first one.

Why do you think it's called the "characteristic" impedance? Because the medium has 'characteristics' that permit the lossless propogation of signals at a specific impedance. That doesn't mean signals with other impedances won't propogate, they just won't propogate without loss. (Of course a real transmission line isn't a perfect medium, so there will be losses even at the characteristic impedance.)

CLP, it is YOU that doesn't understand 'characteristic impedance'. Go back to school.

>Within a coax, the electric field is virtually synonymous with
>voltage and the magnetic field is virtually synonymous with current.
>Maxwell's equations state the direct relationship.

.....? Are you trying to talk about E- and H-fields?

>To answer your question, if you were able to separate the forward
>and reflected 60 Hz signals within that coax, you would indeed find
>that they are propagating at the characteristic impedance of the coax.
>It is because you have reflected signals that your input impedance
>may not be 50 ohms.

Really? Time for a math test: Take 100 feet of 50 ohm coax, feed it with 120 VAC (since most breakers for house current are 20 Amps, we'll fix the source impedance at 6 ohms), and terminate it with 1000 ohms non-reactive. Disregarding any resistive losses in the coax, calculate the forward and reflected power, then use those calculations to determine the input impedance of the coax.

But you are still contradicting yourself by saying that the input impedance changes because of reflected power while insisting that the impedance of the signals in a transmission line do not change AT ALL. Maybe you can explain that, too.

> As your definitions point out above, there must
>be no reflected signal in order to directly see the impedance of the
>forward signal.

...huh?

>> So when was the last time you actually measured the characteristic
>> impedance of a transmission line, "dumbass"?
>
>I never did.

No shit, I could tell.

> I asked how YOU measured it to ensure that your
>experiment was meaningful. I'm still waiting for your answer.

Above I referred you to a couple manuals. Read them. Matter of fact,
why don't you try and measure the characteristic impedance of...
...oops, that's right, more "hands-on" stuff. Forget it.

>In my case, I buy really, really expensive cables from Gore which
>they ensure will be as close to 50 ohms as you will ever find.
>That's their specialty; they know how to do it better than anyone.

That's a cop-out. An engineer deals with all kinds of transmission
lines, not just 50/75/93 ohm coax, or 300 ohm twin-lead. And while you
are at it, you might as well tell what connectors you are using that
have 50 ohm impedance -- you aren't using PL-259/SO-239 connectors,
are you? You said that they cause reflection, so what connectors do
you use? And if you are using calibrated coax, what about the source
and load? Are they calibrated by the same company?

Regardless, if you can't measure a cable yourself, how are you going
to determine if a run is good or bad? Are you going to stick your
customers with the cost of replacing a run with "really, really
expensive" coax just because you skipped class when they were
explaining 'characteristic impedance'? Haven't you ever used an
impedance bridge? It's probably one of the cheapest pieces of test
equipment you can buy (or build), and it does so much, you just have
to read the directions. Are you so lazy that you would squander your
money on some "really, really expensive" coax instead of buying an
impedance bridge and learning to use it? Better think about that one
for a while, too!

>> >> >Now an example for the slow thinkers out there:

>"non-reactive?"

Forget what I said. Do you have a dual-trace o-scope? Crack open a
coax and.... damnit, there I did it again -- suggesting you actually
measure something! I need to get out of that habit!

>get TWO pontoons with your SWR meter; you get one. And it goes up and
>donw in place and that is it. There is no way to determine wave
>direction with that.

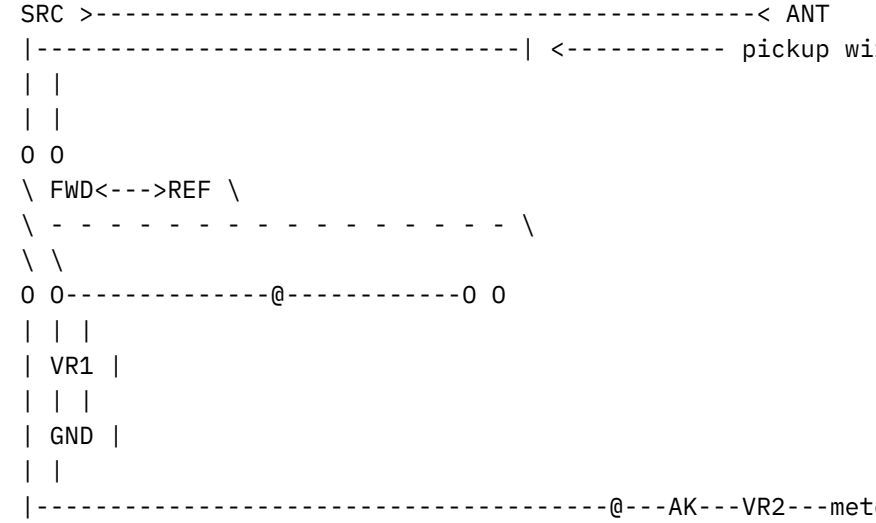
You don't need ANY pontoons (capacitors) to determine direction, just
the boat (inductive link). That was the whole purpose of my
explanation. Did you even read it?

>If you disassemble your SWR meter, you will find ONE loop for each
>measurement. Some meters provide two: one for the forward measurement
>and one for the reflected measurement. But they never use two
>simultaneously as your analogy requires.

I never said it uses two at the same time. You only need one pickup
wire and a switch (FWD/REF). Some meters use two pickups because some
meters have two seperate meters that read simultaneously, usually
POWER and SWR. The effect is the same -- you can't understand a simple
explanation.

> In terms of measuring
>current, all these loops can do is measure the sum total of forward
>and reflected current. No directional determination can be made
>solely from that information.

Bullshit. Page 490 has the simplest power meter in the book. Let's see
if I can copy it ASCII (using fixed width font):



VR1 = Variable Resistor, 250 ohms
VR2 = Variable Resistor, 50k ohms (sensitivity)
AK = Diode ('A' = anode, 'K' = cathode)
meter = 0-1 mA

And here's the description: "An SWR bridge is valuable for adjusting an antenna. The critical part of the bridge is a piece of coax cable with an extra wire inserted between the cable dielectric and the shield."

How much simpler can it get? Not much. How many capacitors do you see (although I would add one across the meter)? None. How many pickup loops are there? One. How much dumber are you going to act? Who knows.

>Also, how can you conclude that the potential is strictly from
>induction and not partially from capacitive coupling?

See the above paragraph about the gimmick capacitor. Also, notice that many of these couplings are actually traces on a pc board, where edge-to-edge capacticance is almost nil. Hey, here's an idea: why don't you take one of your own meters and measure the capacitance... <insert sound of me kicking myself in the ass for suggesting you actually measure something>

>Furthermore, how can you compare an induced voltage to ground when
>such a voltage would be independent of ground (ever hear of an
>isolation transformer). The only component which is not independent
>from ground is the voltage. Hmmm, this seems to jibe with the way
>I claim it works; not your way.

Well, since both VR1 and the meter are connected to the shield of the coax, I wouldn't say that the pickup is totally isolated. Would you?

>[stuff not even worth explaining for the tenth time to Sparky snipped]

And I'm getting tired of explaining characteristic impedance. Are you ever going to learn what it means? or do you just like to argue?

>> >> If, as you insist,

>
>A forward wave will have the following characteristics:
>Positve wave with positive current or
>Negative wave with negative current.

Positive and negative current with respect to what? Direction of the
current? Do you mean 'positive' current is flowing towards the load
and 'negative' current moves the other way? Or do you mean that the
current is increasing when it's 'positive' and decreasing when it's
'negative'?

<snip>

Tell ya what, CLP, I'm going to do you a favor an not even respond to
this dribble. It's obvious that you have never studied transverse
electromagnetic propogation in free space OR transmission lines.

>Show us any way you can.
>
>You cannot.

In a perfect world, adding two sine waves at any phase shift results
in a sine wave. But it's not a perfect world, and coax is FAR from
being a product of mathematical precision. Like I said at first, put a
SWR-loaded line on the scope and you might see distorted sine waves.
It happens because of "mixing", or "modulation" if you prefer, and it
happens all the time to a greater or lesser degree. All you need is a
non-linear device, active or passive. A transmission line can only be
expected to be linear when the signal is at it's characteristic
impedance. Am I saying that you will always see this mixing? No, which
is why I said "might" in the original statement. But I don't think
that I have ever seen two signals 'added' without introducing some
distortion, even at audio frequencies. Have you? Oh, that's right,
that would require you to actually measure something...

>> >> What? Are you going to say that power meters can read

Except you missed the point entirely. Remember this?

I said:
>> But power meters do not
>> read instantaneous voltages or currents,

...and YOU said:
>Wrong! Stop already!

Yeah, it's what you snipped from the quoted text above. But get back to the point and explain how power meters read INSTANTANEOUS voltages and currents.

Now let's get some things straight, and maybe everything else can be snipped if these points are cleared up. Are you saying that:

1. A transmission line can only admit a signal with the same impedance as the characteristic impedance of the line?

2. Every signal that propogates in a transmission line must propogate at the characteristic impedance of the line?

3. Standing waves cannot deviate from the characteristic impedance of the line?

4. A power meter must measure both voltage and current?

5. A power meter cannot determine direction if it is using only a single pickup wire?

And one other thing, what are the first 5 words on page 146?

That's his typical M.O. for any "debate" (and I do use that term VERY
loosely) that he may choose to enter into. He is skilled at obfuscation,
and changing meanings. Even when one clearly expresses the point, twisty
will instead focus on the nuances, rather than the substance of a point.

>
> I learned many years ago that it is impossible to win a debate or argument
> with a fool. Like a fool Twisty's logic changes from post to post just as
> his accusations do. As I punch holes in them he changes.

One of his biggest hangups during one of our earlier altercations, was
to continually attempt to steer the focus of the debate from illegal CB
operations to USENET ettiquette. I assume he was attempting to make the
point that "people in glass houses shouldn't throw rocks". In any case
his comparison was irrelevant to the debate, but he continued to make an
issue out of it anyway.

> One of his
> tactics is what is called "tit for tat" which is nothing more than saying,
> "Well, what about you?" and "I asked you first."

Also true. One cannot make a comment regarding CB operation, without twisty countering that "hammies are guilty of XYZ" as well. Two wrongs still don't make a right, and neither does a counterpoint diminish the truth of the original point.

> This will cause you to
> lose a debate. His latest claim is that I claimed to be an "OFFICIAL FCC
> OBSERVER." I never said that. I explained this in another post and am
> waiting to see what creative answer he can come up with this time. Of
> course, Twisty, there is a big advantage to being anonymous, you can say
> what you want, make whatever claims you want and you don't have to be
> accountable for any of them.

Twisty has no real debate skills. He is incapable of staying on topic, he seems to have trouble comprehending simple points and analogies, while accusing the other party of exactly the same thing. His "stradegy", if you could call it that, is to twist meanings, obfuscate points, and then accuse others of "lieing", to put them on the defensive, while never offering up any bits of factual information to prove his side. He claims to speak for the majority of people, yet I have never seen anyone jump to his defense during any of his "debates". He also has an over inflated ego, and cannot possibly comprehend how so many people can find fault with him. To counter that, he claims that each and every person on the other side is really just one person posting under numerous accounts. He probably thinks that you, me, Aaron, Frank etc, are all the same person.
He then claims victory when the other side simply becomes frustrated or loses interest in pursuing further exchanges. He is as predictable as PMS, you can almost tell exactly what posts he will respond to, and almost exactly what he will say in response. I've baited him a few times just to prove my theory. He fell, hook, line and sinker.

He reminds me of that old Monty Python skit where the guy pays for an arguement, but gets only rote contradiction. Twisty will counter anything you say, but can never back up any of it with fact or even a good theory.

Which is why he is refered to as the newsgroup punch clown. He's good to lash out at if you want to get something off of your chest, or just want to do the intellectual equivilent of bitch slapping. String him along until you tire of him, and then let him babble to himself.
But he's not worth the effort to take seriously.

I think that I could safely say that that's most of them. Though, I'm
sure that there might be a few cases of people who just buy ham or
commercial rigs and bootleg on unauthorized freqs from the get-go, most
at least got their start from CB and went from there.

> Many of those that were busted were using Ham gear on Ham frequencies.
> It is unlikely that they ever operated on CB frequencies.

Is it really that unlikely? Where did that bootlegger get his first
taste of radio? Since CB is legal, and cheap, it stands to reason that
this is the first stop for many person's radio careers, legal or
otherwise, especially in the last 25 years, when CB became a national
fad.

>
> I prefer to call anyone who operates out of band a bootlegger, and not

I would agree, as this is more technically correct.

> they were operating "up" from the CB band or "down" from 10 meters.

Yes, but the point that I was trying to make, is that there is no legally binding agreement to operate a CB radio. You're just Joe Citizen. If you stray off of the legal channels, you could plead ignorance, and a host of other things, and you can't be held totally responsible. A ham, on the other hand, has a license, that proves that he passed a test on, among other things, a knowlege of rules and operating practices, including assigned frequencies. A ham busted on freeband, cannot use the excuse that he didn't know better. The presence of the license proves otherwise.

> In the FCC enforcements, it appears that cites are often for "CBers
> operating out of band" or "Amateur operating out of band". So if my
> memory is correct, the FCC does not automatically "no longer consider
> a person a CBer" when they operate out of band.

In some of the memo's that I've read, when a bootlegger is busted, who is also a ham, the fact that he was a ham operating on an unassigned frequency is usually stated. When an assumed "CBer" is busted for operating out of band, it usually does not mention CB at all. Rather it is usually something like "operating an unlicensed station, on unauthorized frequencies" or something similar.

What makes a person a CBer? Technically, operating a part 95 accepted tranceiver on assigned channels. Once that is no longer true, they are not really "CBers" anymore, just radio pirates.

> > A ham, who runs on the freeband, has more to lose than a regular

> bands of operation, frequencies within those bands, modes of operation,
> legal power limits etc.
>
> Why a licensed Ham would operate out of band - with so much to lose, is
> something I cannot understand.

It's a little silly. But I can understand it. Many people start out on CB, upgrade to ham radio, but still enjoy the friendships that they've made on CB. While they may add ham radio to their hobby list, they still enjoy CB, and many times will step over that fine line that differentiates a CBer from a bootlegger. Many think that because they're using a modified CB, and that their ham radios are on a table 5 feet away, that they can be treated seperately in the eyes of the law. That's just not the case. You can't "turn off" the ham license when you want to be a CBer or freebander.

kwthom,
I think you might take another look at PL-106-521.
I think you will find that technical assistance can
be requested of the FCC, but it doesn't say it has
to be. It does say that the convicted can appeal the
decision of a local court to the FCC. It does not
say that the FCC has to be involved at all, other than
in an appeal. Not as many 'loop-holes' as you may
think...

Ok, I'll play along one more time.

You say that I made this claim of busting 27 people since Christmas. Just for the sake of argument I'll let that go. You claim to have verified that I did not make these busts. Apparently you have made contact with the various courts in Texas that have contradicted what I have said. Please give us names, phone number and the times that you called so that we can all verify this. Did you "make calls" that were unable to verify my claims or did you make calls that were able to contradict my claims. There is a BIG difference. You see I have never seen your brain, I don't know anyone else who has ever seen your brain. In fact I doubt that anyone in the entire world has seen your brain. So we can't verify that it exists at all. So if we use your logic of "unable to verify" then your brain doesn't exist.

So, lets have names, places, phone numbers, dates and times that you called these places to check up on me. I don't want EMails or web sites, those can be faked, I want names and phone numbers so that I can call them. If you can't then by your standards you are a liar.

Hello again , Frank.
If you were in touch with Carol at all, you wouldn't have to change the original claim that had you choking on crow.
There has been no laws, ordinances passed by the city of Beloit in response to HR 2346 that they helped sponsor...end of story.

Did you notice this little ditty from our lying friend Muenzler? Almost like as if you took him under your wing <g>.....you tell the group I live in WV and am a hammie,,,Munzler tells the group I'm coax length police....as was shown, you boobs don't know anything about anything. Now carry on and do try to keep y'alls anger in check and if your comprehension and poor communication skills will allow, try and not allow me to control your ire and stick to the issues that you are wrong about...like Beloit not passing any laws in response to HR 2346...here's another freebie educational fact for you that you apparently were unable to unearth concerning the law.....local laws passed prior to HR 2346 are not granfathered in. Enjoy.

From: wb5rue@yahoo.com (Kevin Muenzler, WB5RUE)
Looks like Twisty is the "coax police" too.

Wrong? I'm beginning to think you have a serious ailment on top pf
habitual lying. Check it out:

Muenzler claimed: "I never said "busts", those were your words."

But then we look at his very first post in the thread and find.....
"I don't believe I ever said successfully prosecuted I said "busts."

See how the lies come back and bite you in your azz, Kevin.

Moving on, we have your current denial, telling me I'm wrong...but
again..verbatim from your lying little lips we find again in your first
post:

"We turned over information to about 35 people since December and there
are 27 that I know of that are either on their way to court, in court or
have been through court."

Just like any information, your lies are available and easily accessed.
I can find many more, and Frank is so impotent in running to your aid,
he thinks I'm in WV. You can't explain any of your lies away, Muenzler,
but I did so enjoy watch you decimate your reputation while trying to
stand taller than you actually are just to attempt to pee on my leg.

And there were about 3 hams that got hit for operating on 27.585 on the last
RainReport/ARRL Enforcement column---in Indiana, I think. I really wonder
if they were using a CB transceiver, or just dialed it up on their modified
Icoms.

Your assessment makes a lot of sense, Dave. Perhaps, my view of it is
prejudiced,
but it seems just a "tad" unfair that they got hit, and, if they were
talking to domestic
CBers, those stations didn't get hit, too. Maybe "shooting skip" overseas?
How-ever, I believe they will eventually get around to the "freebanding"
thing, but it isn't
on their hot list right now.

I'd have to vote for the Stainless Steel whip as being Bullet proof. I have had the Fiberglass whips break off at the base, thats where all the mechanical stress is. Good thing I caught the whip rolling off the top of the cab, didn't want to smoke off my new 8 pill amp, once going thru some thick tree's in Death Valley, while 4 wheelin up a stream to Pamamint.

I have seen the guys use the Wilson 5000 mounted on top of the full sized vans and trucks. The 60 some odd inch is very flexible, and the Wilson 5000 works pretty darn well.

Well, if anyone has this album in any format, and they are willing to trust me with it, they can send it to me and I'll put it on CD (keeping a copy for myself) and send the album & CD back to them.

If you have it, contact me at: mailto:tolsen64@boycot.dns2go.com

"Twistedhed" <twistedhed@webtv.net> wrote in message news:12881-3D2C4E50-32@storefull-2315.public.lawson.webtv.net...

>I used to have an LP called "All Ears" that was sold by Radio Shack way back when I was a small kid. It had a variety of CB songs on it such as:
Hey Shirley, This is Squirley
Everybody is Somebody (In our CB World)
L.J.'s CB Radio
Those are the three songs I remember most. Does anyone remember this? Or better yet, does anyone still have this album? I'd sure like to have a copy of it.
Thanks,
Terry
Old Time CB'er.<

Hell yea, I remember this,,all I remember is the first line...."Hey Shirley, this is Squirley, have you got your ears on?" I don't have this particular song, but I do have a very old album with a bunch of other cb tunes.

787. OT - The Truth

Newsgroup: rec.radio.cb
Date: 2002-07-10 18:26:24 UTC
From: Keith Hosman <arcweb@bnnorth.net>
Message-ID: <j%_W8.2053$pv6.250676@cletus.bright.net>
Source record: 129816

Back in 1969 a group of Black Panthers decided that a fellow Black Panther named Alex Rackley needed to die. Rackly was suspected of disloyalty. Rackley was first tied to a chair. Once safely immobilized, his friends tortured him for hours by, among other things, pouring boiling water on him.

When they got tired of torturing Rackley, Black Panther member, Warren Kimbro took Rackley outside and put a bullet in his head. Rackley's body was later found floating in a river about 25 miles North of New Haven, Conn.

Perhaps at this point you're curious as to what happened to these Black Panthers.

In 1977, that's only 8 years later, only one of the killers was still in jail. The shooter, Warren Kimbro managed to get a scholarship to Harvard and he became good friends with none other than Al Gore. He later became an assistant dean at an Eastern Connecticut State College. Isn't that something? As a '60's radical, you can pump a bullet into someone's head and a few years later, in the same state, you can become an assistant college dean! Only in America.

Erica Huggins was the lady who served the Panthers by boiling the water for Mr. Rackley's torture. Some years later Ms. Huggins was elected to a California school board. How in the world do you think these killers got off so easy?

Maybe it was in part due to the efforts of 2 people who came to the defense of the Panthers. These 2 people actually went so far as to shut down Yale University with demonstrations in defense of the accused Black Panthers during their trial.

One of these people was none other than Bill Lan Lee. Me. Lee, or Mr. Lan Lee as the case may be, isn't't a college dean. He isn't a member of a California school board. He is now head of the US Justice Department's Civil Rights Division, appointed by none other than Bill Clinton.

O.K., so who was the other Panther defender? Is this other notable Panther defender now a school board member? Is this other Panther apologist now an assistant college dean? No, neither! The other Panther defender was, like Lee, a radical law student at Yale University at the time. She is now known as the "smartest woman in the world." She is none other than the Democratic Senator from the State of New York. Our former First Lady, the incredible Hillary Rodham Clinton.

And now, as Paul Harvey said; "Now, you know the rest of the story"

Do we need to remember this when she runs for President???

You mind is playing tricks on you again, Twisted. If you recall - you were merely asked to prove that Beloit had enacted no CB laws. Since the email you say you recieved (no headers, looks fake) and the one I received (full headers, time and date stamps) totally disagree with each other, nothing at all has been proven. You haven't "won" anything -- except the right to go on posting warped stuff for us to laugh at. Get busy.

Dave, I laughed...I cried...I applauded till my hands were sore. I
think what you wrote ought to be posted in every NG on the internet.
It should even be printed and posted on the wall of every schoolhouse
in America. And maybe even every bait and tackle shop in Tampa Bay.
Because it captures perfectly what Twistedhed is all about.

For a long time now I've been a proponent of getting truckers to use a vhf or uhf fm rig to communicate amongst each other on the road. What would it take to make this happen?

How does one go about gaining popular acceptance of these radios?

Is it the radio shops themselves which are holding back? I can see their point because it would not generate repeat sales for power mics, fancy overpriced antennas etc etc. Repairs would most likely dwindle.

I doubt amplifier sales would suffer because there'd be a new niche market to sell to.

Even if someone just threw a frs handheld radio in a cute chassis with an outside antenna connector I bet it would sell if shops would push the idea.

I know this would be technically illegal but I'd be willing to bet the fcc and hamsters would love it. No more tvi complaints from cb sets to deal with. Much less probability of drivers resorting to out of band freqs just to communicate a few miles.

waltz time mit oompah und kraut)

We're coming, we're coming our brave little band
On the right side of temp'rance we do take our stand
We don't use tobacco because we do think
That people who use it are likely to drink

(Chorus)
Away, Away with Rum, by gum
Rum by gum, rum by gum
Away, Away with Rum by gum
It's the song of the Temperance Union.

We never drink water - they put it in gin
And one little sip and a man starts to grin
O, can you imagine a sorrier sight
Than a man drinking water and singing all nite

Chorus

Well, Aaron, I guess I am finally ready to do a complete 180 and see the light (Sparky, if you're reading this too, you'd also agree). It's time for me to dust off the guns in the den, sink $1.7K into an OAR DF unit, and go out and do the FCC'S job for it. If I find any FCC agents while I'm out enforcing the communications laws, I'll personally see to it that a federal judge throws the book at the lazy so-and-so's for dereliction of duty. If they give me any lip, I'll throw in a failure-to-enforce charge, too.

As for the keyclowns, they get warning shots---a 13mm round in the thigh is warning enough for the next keyclown. This is one law they're going to respect.
One of my connections from detective-academy days works in the SSA's HQ in Baltimore... the keyclowns won't be able to get away so easily.

Unfair? Hardly. As Dave noted, Hams are supposed to know the regulations, which is one of the reasons that Hams have more freedom in legal operations. To me, they are as much (or more) deserving of being busted as a CBer who runs a modified CB radio in the Ham bands.

In many of the reports about Hams who operate below 28 MHz, it is noted that they were causing intentional interference - either on the legal CB frequencies or in the 10/11 meter "freeband" area.

You would have a hard time convincing me that any Ham was unaware that he/she was operating on illegal frequencies - or that the intentional interference was not illegal.

Bill Nelson (billn@peak.org)

So, Bill, you are saying that the information is NOT available to CBers to
let them
know that "freebanding", or amps, or unapproved radios are illegal? Or that
CBers
lack the intelligence or ability to read to find out how they are supposed
to operate?
I doubt that. Do you REALLY expect me to accept that CBers don't know that
"freebanding" is wrong and illegal?

Ignorance of the law is no excuse--same as if you speed and tell the cop that you
didn't "know" the speed limit was 35. Illegal is illegal is illegal, it is the responsibil-
ity of the user to know the rules governing his operations, and if there is punishment
for one, then it should administered equally to all that violate the rules.
Yes, the ham should know better, but still, if he gets into trouble for operating out of band,
then the CBer should be punished for doing the same thing.

So are cbers, they should be aware of the cb regulations just as
much as a ham should be aware of amateur regulations.

> To me, they are as much (or more) deserving of being busted as a CBer who

Why? Illegal is illegal no matter who is doing it.

>

I normally don't care about idiots that key down and play music and all that. But there is one local guy that is taking it to extreme. As a matter of fact, one of my friends was stuck, and he was trying to give me directions, and this guy kept keying down and playing music every time my friend spoke with directions to where he broke down. This guy just plays music every night for the past month, and trying to talk to anyone is impossible. He even follows me to other channels. I know he is a base station and not a mobile. Does anyone have any detailed suggestions on how I can track him down? I tried driving around in my car with my RF gain turned all the way down and figured that when the meter hits 30 pounds with the RF gain all the way down, I would be close. But no luck yet. Is there a better way? Any tips or tricks or devices? Thanks.

Uniden HR 2600 Amateur Radio. It has had the microprocessor replaced and now works on 10 and 12 meters. (You must have a valid amateur radio operator license to transmit with this radio.) Please email me for information on modifications. I recently had the final transistors replaced by a professional technician. He also tuned it up and made sure it was in good operating condition. It puts out a solid 10 watts on AM and FM and around 40 watts on sideband.

It will transmit and receive from 10 to 12 meters on CW, USB, LSB, AM, and FM. There are 4 separate bands with memories and will do split operation for 10 meter FM repeater operation.

Comes with the original hand microphone (UP/DOWN) in good shape, DC power cord, original operating manual and ChipSwitch manual.

Disclaimer: A previous owner has installed inch high "legs" on the front edge of the bottom of the radio. Also, the original connector in the back has been altered by adding a toggle switch for internal/accessory speaker and RCA jacks. There is no mobile mounting bracket. Due to the type of equipment and age, it is being sold "AS IS" but not DOA.

$250 shipped , insured, to US address. I accept Pay-Pal or money orders only. Please email me for additional info or photos.

From: Kenneth <pwrguy@intergrafix.net>
Message-ID: <uiq0qhofhm0i4b@corp.supernews.com>
Source record: 129842

If you read this newsgroup it seems that some believe that every TV mp3 player and radio has cb rf intererence ruining it. This is a bald face lie. About 95 percent(my own obsevation-half a million miles worth) of RF interference is from old electrical wires from the electric company. If Rush Limbaugh is drowned out from RF on your AM radio look at the telephone pole's and you will probably see those old glass thingies where the wires conect to the top of the pole.
Another 4 percent is from cheap computers.
If you are on 81 around exit 142 and listening to the talk radio station on 1300am you will hear bleedover from the weather band.
Never EVER have I heard beeldover or any interference from illigal cb on ANY am or fm station or TV. It simply doesn't exist.
Some poeple even suggested freebanding is a threat to the military. Like the offensive in IRAQ could have been thwarted by some raghead with a Galaxy99 going baba-boey on his radio! These people make trolling newsgroups entertaining but thats about it. They will even spellcheck your troll for free.
Along the I-80 corridor they have a problem with trash haulers. They roll over and kill people of just make a real mess. Log book violators fall asleep and kill even more. Real police are concerned with REAL problems.

Hi All

This is the first time in this news group ..I am having problems with my mic .it's off a midland cb the cb is old .not sure on how old it really is ....the mic works only once in awhile I took the mic apart and found a black wire was broke off inside the mic (solder let loose) It is not the 4 wires for the plugin to the cb ...there is 3 other wire in the mic 1-red 1-grey and 1-black all 3 are connected to the green mother board on the mic the board is a DM-437 the red and grey wire is connected to the mother board and is soldered to a round spool thing about the size of a quarter(I don't know the name of this thing sorry)..and the broken black wire is soldered to the bottom of the mother board but the other end of the black wire is not connected to anything the black wire has solder on the end of it still ....so I'm thinking the solder just broke off where ever the black wire was connected to..

thanks for any help given ....

Zeek

You should know better than to read things into what others wrote. I did
not imply any of the things you mention.

Yes, the information is available, if the CBer looks for it. Many don't
and many don't know that such things as expanded channels or increased
power are illegal.

The difference between the two services are that Hams are required to
take a test on the regulations - so supposedly they know them before
they can get their license. CBers do not have a test or license.

There are two ready options. You can try contacting the FCC, but that may
not get a response. You can try contacting your local Ham club. They might
be interested in helping.

They should be, but how many just open the package and use the radio,
without reading what little coverage of regulations are there? Probably
most.

>> To me, they are as much (or more) deserving of being busted as a CBer who
>> runs a modified CB radio in the Ham bands.

> Why? Illegal is illegal no matter who is doing it.

Yep. But Hams are required to study the regulations. They KNOW they are
breaking the regulations - many CBers have no idea that they are.

>> In many of the reports about Hams who operate below 28 MHz, it is noted
>> that they were causing intentional interference - either on the legal CB

> Like the non-ham freebanders aren't?

Some non-ham freebanders, and even CBers cause intentional interference.
That does not excuse the Hams, who definitely know better, when they do
so.

Yes, I have a higher standard for Hams than for CBers. That is because
Hams are supposedly better trained and more knowledgeable. This is why
Hams have greater operating privileges. With greater privileges comes
greater responsibilities.

821. Re: truth about RF interference

Newsgroup: rec.radio.cb
Date: 2002-07-11 07:58:52 UTC
From: 'Doc <w5lz@icok.net>
Message-ID: <3D2D3AB8.2C5AE775@icok.net>
Source record: 129850

Kenneth,
I don't think anyone has suggested that all
interference to home electronics is from CB radios,
or just radios in general. But, you do have to
admit that there is some RFI caused by CB radios.
If you've never experienced it, all I can say is
that you have been very lucky, so far. CB isn't
the only source for RFI by any means. Anyone using
a transmitter is a potential source. That encludes
hams, Part-15 devices, and who knows what else.
Freebanding. That's a real oxymoron, you know?
The frequencies between 27.405 and 28.000 are not
'free' by any means. Various pieces and parcels
are assigned to a large number of different agencies,
private industry, and the military. Just because
you have never heard anyone using them certainly
doesn't mean that they're not used, they are (when
the legitimate users can get around the interference).
I can say from personal experience that the military
does use some frequencies in the 27 Mhz range.
Interference to Am, FM, and broadcast TV? I
haven't heard any interference to them in years, since
I quit using a TV antenna on the roof. Has it been
eliminated? I doubt it, but I haven't had the
opportunity to listen, so I can't say for sure. (But
I really doubt it.)
"Why aren't the cops chasing 'real' criminals?",
or, the thing about Iraq, those are real lame excuses.
Do you honestly think, that if given a choice, the police
would rather be chasing CB'er, or hams? People who
really believe that stuff need a 'dose' of reality along
with their 'Ex-Lax'! It might 'sound good' in the
'National Enquirer' but people who think have a hard
time swallowing it.
Before everyone accuses me of being an 'anti-freebander',
let me just say this. I couldn't care less if you're a
'freebander', or not, as long as you don't cause ~me~ any
problems. I'm certainly not your keeper, or anyone else's.
The only thing is, if you do use the so called 'freebands',
then take responsibility for your actions. No one is twisting
your arm, and you're supposed to be able to know right from
wrong...
'Doc

There are many tricks you can do to pin down an area if you have a handheld radio, and even if you don't:

If you have a handheld, find a large metal shed or garage nearby and stand right next to, and in the center of, each of the four walls. The signal will be stronger on the walls facing the transmitter.

If you hold a handheld with the antenna parallel to the ground and do a 360, sometimes you will get two weak spots in opposite directions. If that happens then the handheld antenna is either pointing directly towards or directly away from the transmitter. Do this at several locations and plot your vectors.

Instead of you trying to get a location from your S-meter, try doing the opposite: you can try taunting him at different locations around town and see just how far HE can hear YOU. Then you can pin it down to a smaller area, and maybe even a neighborhood.

If you have a little electronics construction skill, you can build a simple radio direction finder. There are many designs on the net. I have a design myself, and as soon as I get my site back up I'll post the link. Or you can email me and I'll send you all the info about how to build your own Twisty-Buster radio direction finder.

When you finally get him pinned down to a house or small neighborhood, contact the FCC -and- the ARRL with all your information. BTW, never assume that it's coming from one house just because there is an antenna mounted on the roof -- the jerk just might be in the house next door with an antenna hidden in the rafters of his garage. Also, don't assume that it's not a ham!

oh boy, this calls for a fox hunt.

well, all you need is your radio in the car and some means of telling
which direction he is in initially. after that, its a simple matter of
driving around until you can confirm location by unplugging the antenna
and seeing full scale on the meter.

I used to do this many years ago with a local group here in phoenix. we
got pretty good at locating people in under 30 minutes (even mobile).

Nobody said it but you, so you must be the liar.

> About 95 percent(my own obsevation-half a million miles worth) of RF
>interference is from old electrical wires from the electric company.

Actually, 99.999% of RFI is caused from harmonics of 60 and 120Hz
generated by SCR and Triac circuits. Light dimmers, CRT-type computer
monitors, street lights, power tools, fan motors and alarm clocks make
the majority of noise in most residential areas. This kind of
interference is expected, accepted, and not considered to be harmful
interference.

> If Rush
>Limbaugh is drowned out from RF on your AM radio look at the telephone
>pole's and you will probably see those old glass thingies where the wires
>conect to the top of the pole.

A better bet is that the radio is an old tube-type clock radio with
bad caps and dirty commutators on the clock motor.

> Another 4 percent is from cheap computers.

The expensive one's are just as noisy despite their marketing claims
to the contrary.

>If you are on 81 around exit 142 and listening to the talk radio station on
>1300am you will hear bleedover from the weather band.

Aren't the weather bands up near 16x.xx MHz? If you are getting
bleedover from your local weather transmitter then either your radio
is bad, you live next door to their tower, or their transmitter is
-really- messed up!

> Never EVER have I heard beeldover or any interference from illigal cb on
>ANY am or fm station or TV. It simply doesn't exist.

There are several hundred thousand people that disagree with you,

>interference is from old electrical wires from the electric company.

Actually, 99.999% of RFI is caused from harmonics of 60 and 120Hz
generated by SCR and Triac circuits. Light dimmers, CRT-type computer
monitors, street lights, power tools, fan motors and alarm clocks make
the majority of noise in most residential areas. This kind of
interference is expected, accepted, and not considered to be harmful
interference.

> If Rush
>Limbaugh is drowned out from RF on your AM radio look at the telephone
>pole's and you will probably see those old glass thingies where the wires
>conect to the top of the pole.

A better bet is that the radio is an old tube-type clock radio with
bad caps and dirty commutators on the clock motor.

> Another 4 percent is from cheap computers.

The expensive one's are just as noisy despite their marketing claims
to the contrary.

>If you are on 81 around exit 142 and listening to the talk radio station on
>1300am you will hear bleedover from the weather band.

Aren't the weather bands up near 16x.xx MHz? If you are getting
bleedover from your local weather transmitter then either your radio
is bad, you live next door to their tower, or their transmitter is
-really- messed up!

> Never EVER have I heard beeldover or any interference from illigal cb on
>ANY am or fm station or TV. It simply doesn't exist.

There are several hundred thousand people that disagree with you,
including myself. It certainly doesn't happen all the time, and some
people will probably never hear it in their lifetime. But just because
you have never seen something doesn't mean it doesn't exist.

And for some people, radio interference on their TV and radio -does-
happen everyday. Most of those people live next door to radio
operators that cause this kind of interference.

I recall trying something similar long ago which worked like a charm. First strike up a friendly conversation with the guy and see if you can get an approximate fix on his location. Butter him up to no end with "boy you have a great sounding radio, what are you running?" Then tell him your location or make one up and ask where are you; what section of town saying "I have friends that live in the area; small world!." If you can determine an approximate area the old tried and true method is getting in the car and ride around till he pins your meter. Disconnect your antenna and ride around circling in a 4-5 block area. When he pins your meter again with the antenna disconnected your within a block or so. Just look up to see if you can spot his antenna. Reconnect yours and strike up a conversations again "saying your killing my meter; oh btw are you in the brown house (or whatever color) with the A99?" .. busted! .. It's likely he'll immediately run to the window to see who is parked in front of his house.

There are many tricks you can do to pin down an area if you have a handheld radio, and even if you don't:
If you have a handheld, find a large metal shed or garage nearby and stand right next to, and in the center of, each of the four walls. The signal will be stronger on the walls facing the transmitter.
If you hold a handheld with the antenna parallel to the ground and do a 360, sometimes you will get two weak spots in opposite directions. If that happens then the handheld antenna is either pointing directly towards or directly away from the transmitter. Do this at several locations and plot your vectors.
Instead of you trying to get a location from your S-meter, try doing the opposite: you can try taunting him at different locations around town and see just how far HE can hear YOU. Then you can pin it down to a smaller area, and maybe even a neighborhood.
If you have a little electronics construction skill, you can build a simple radio direction finder. There are many designs on the net. I have a design myself, and as soon as I get my site back up I'll post the link. Or you can email me and I'll send you all the info about how to build your own Twisty-Buster radio direction finder.
When you finally get him pinned down to a house or small neighborhood, contact the FCC -and- the ARRL with all your information. BTW, never assume that it's coming from one house just because there is an antenna mounted on the roof -- the jerk just might be in the house next door with an antenna hidden in the rafters of his garage. Also, don't assume that it's not a ham!

Probably is a nocode from this ng......otherwise why would you tell him to contact the ARRL...oh,,,like the freebanders and linears and FM pirate broadcasters affecting your work and measuring SWR with a voltage meter..forgot who you were for a sec.

>For a long time now I've been a proponent of getting truckers to use a vhf or uhf fm rig to communicate amongst each other on the road. What would it take to make this happen? <

Won't happen, at least in this lifetime.
It would have to be a slow transition. Owner operators won't buy into it as it's their own bucks and not many truckers or motorists are on those bands. Companies that provide the trucks with radio equipment are usually so damn cheap in the first place they would be loathe to buy anything for the convenience of the driver. As long as newer trucks are fitted with on-board satellite and tracking GPS systems and a cell phone, the company doesn't give a damn. Besides, many truckers like the DX when their ain't many to talk to on the big road. If there was an immediate need for assistance, I think the driver would feel more comfy with a cb than a vhf rig. Old habits die hard.

>How does one go about gaining popular acceptance of these radios?
Is it the radio shops themselves which are holding back? I can see their point because it would not generate repeat sales for power mics, fancy overpriced antennas etc etc. Repairs would most likely dwindle.
I doubt amplifier sales would suffer because there'd be a new niche market to sell to.
Even if someone just threw a frs handheld radio in a cute chassis with an outside antenna connector I bet it would sell if shops would push the idea.
I know this would be technically illegal but I'd be willing to bet the fcc and hamsters would love it.<

I've heard drivers on FRS before.

> No more tvi complaints from cb sets to deal with. Much less probability of drivers resorting to out of band freqs just to communicate a few miles.<

Truckers aren't largely responsible for the ones causing the interference to TV's.
The idea would have to be grandfathered in anyway. Maybe if drivers began with a VHF radio IN ADDITION to a cb, then something could possibly take hold, otherwise, it just seems like another nonissue, except to hammies.

hey,all radio transmitters generate rf "noise"
any honest ham radio operator will admit that. even the "cleanest" rigs will generate t.v.i..i dont care if its made by kenwood,or icom,or yaesu. they all do it to some extent. a factory fresh,non modified,cb radio,with stock mike and modulation will "bleed" over onto your neighbors phone,stereo,tv etc. alot of it has to do with the poor filtering of the device being interfered with. phones and stereos are made as cheaply as possible.the engineers who design them are not worried about interference cause by cbers and hams.

>>Antonio/South Texas area"<
>

OK, I usually don't refer to Official Observers as "FCC Official Observers" but if you really want to get technical we are "FCC Official Observers." We are all members of the "FCC Amateur Auxiliary" which are known as "Official Observers." You are arguing semantics again.

Check out: http://www.arrl.org/news/stories/1999/04/08/3/
The title of this article is "FCC Official Acknowledges OOs Really Are 'Official'"

Also: http://www.arrl.org/FandES/field/org/oo.html

No, we are not paid by the FCC to technically (you seem to love technicalities) we don't work for the FCC. We are volunteers. The results are the same, busted illegal operators.

>
>Moving on...we have your amusing snap:
>>"BZZT! Strike two. I never claimed a single bust. Again, a product of
>>your imagination."<
>
>
>But again, from your first post, we have not only you denying the
>"prosecutions" but actually CLARIFYING that they were busts.
>"I don't believe I ever said successfully prosecuted I said "busts." If
>I did then it was misleading and unintentional."

You are taking me out of context again. I never said that I made busts. I said that I participated in busts. Only the FCC can make the busts. Like I have said a couple of times, me and several others provided evidence for these busts. We never made the busts. You are arguing semantics and taking me out of context.

>
>Lie upon lie upon lie....

Twist upon twist. Truly a legend in your own mind. I'm still waiting on those phone numbers, names and court names. But I see that you are now focusing on semantics. I guess you were lying about getting proof that I am

lying.

Kevin, WB5RUE

Bill Nelson wrote:
Unfair? Hardly. As Dave noted, Hams are supposed to know the regulations, which is one of the reasons that Hams have more freedom in legal operations.

>So are cbers, they should be aware of the cb regulations just as much as a ham should be aware of amateur regulations. <

Yup, they SHOULD. The difference is, the hammie is SIGNING a sworn testimony, attesting that he in essence, is aware of the regs, and agrees to abide by those regs.
One must admit, ignorance is a much greater probability with a cber not knowing they are breaking the law, as opposed to a hammie. A new driver, in a company truck, could damn sure have extra channels. Someone can tell him to go "2 up" and he may find himself in the middle of 10 meters. VOILA...our green driver is suddenly illegal, without knowing. SHOULD he know? Absoloutely...but he isn't MADE to know. The hammie knows.

>>To me, they are as much (or more) deserving of being busted as a CBer who runs a modified CB radio in the Ham bands. <<

Why? Illegal is illegal no matter who is doing it.
In many of the reports about Hams who operate below 28 MHz, it is noted that they were causing intentional interference - either on the legal CB frequencies or in the 10/11 meter "freeband" area.

>Like the non-ham freebanders aren't? <

Some most definitely are. After being familarized with this group, one can take away the very plausible deduction that most inteference to the freeband and coming from the freeband may very well be from hammies that think in this manner. They may be so angry at the FCC for doing absolutely nothing, and feel that if THEY can't talk there, then by rumsong, NOBODY will talk there. Based on the anger demonstrated in here by a few hammies, this is a very probable scenario.

FS MODULATOR WITH BUILT IN 13.8V@10 AMPS POWER SUPPLY
Very nice unit. Run you mobile in the house with this power supply and
modulator combo. 50-60 watt modulator.This thing gives you alot of extra
audio everyones says its really loud!! or just hook up your base rig
and use the modulator for a driver. will run anything 12volts up to 10 amps
with the built in power supply. size 11"W x 12"D x 5"H weighs about 7
or 8lbs has meter for voltage, lights, screw on terminals on the front
to hook up your radio for power.Asking 175.00+shipping

-Aaron- <

Picking up the lies where Muenzler left off doesn't make them anymore true. Lelnad has twice advocated violence. Once with the comment about shooting freebanders in the head (an obvious retort without any clear thought behind it) and when he made an implied death threat to me, telling me I was a "dead fish."

And we can't forget Frank, who threatens to shoot people with the aid of his rifle scope.

Then of course we have Dogie, who bows to the almighty cb, and worship those who reject his calloused and chickenhawk mannerisms.
We also have his entrance into the ng and obsessive, profane, homo-laden rants and threats preserved for posterity in the archives.
Endorsed violence, homosexuality as a favorite topic, and lies make up your "AKC". How proud Kevin is now that you allow him entrance to your warped society.

Yet, it is their responsibility to know it whether they do it or not. Heck, they
probably don't even read the owner's manual, much less the regulations.
>
> The difference between the two services are that Hams are required to
> take a test on the regulations - so supposedly they know them before
> they can get their license. CBers do not have a test or license.

CB stations operate under a "blanket authorization". They are technically "licensed"
and subject to the rules just as if they had a paper license in hand. Yes, they, per-
haps, don't know the rules, but just as with the traffic cop, "B-b-b-b-but, Mr. Agent, sir, I-I-I-I didn't know it was illegal to use a 'leenyar' or tawk on that 'ere
freeband" won't hold water.

I am happy, however, to see that Mr. H. is stepping up enforcement of all kinds.

>Perhaps, my view of it is prejudiced,
but it seems just a "tad" unfair that they got hit,<

Why is that? You have always claimed that freebanders get what they
deserve. Now by virtue of a ticket they deserve less? It's really
beginning to smell in here and it's coming from all the spoiled pork. A
bad one can contaminate the lots that never were a prime cut.

I didn't say that. I said that if the hams are doing it (freebanding) and
get popped
because it is illegal, then the CBers doing it should get the same
treatment. After all, one's first contact with FCC is likely to be a
warning letter, and if he quits, no
harm done. I am much in favor of hams who engage in wrongdoing getting
busted
because their activities reflect badly on the Service. Likewise, I am in
favor of others who do the same thing getting the same treatment. Illegal
is illegal is illegal,
and, therefore, wrong.

J

> and, if they were talking to domestic
CBers, those stations didn't get hit, too. Maybe "shooting skip"
overseas? How-ever, I believe they will eventually get around to the
"freebanding" thing, but it isn't
on their hot list right now.
73
Jerry<

And it never will be unless it's a safety issue or a repeated
nuisance/interference complaint. It's a nonissue in most cases.

Thanks.

Get hold of one of those cheap 18" CB mag mounts. When he is on the air,
stick this onto the side of the car door. Drive to a point where you have
just a fair
signal. Remove the regular CB antenna and connect the little cheapie. Drive
in a
circle, preferably in a parking lot, and note where the signal nulls
(becomes weakest). Using a compass, note the direction. Drive closer in
that direction and
do the same thing. If you have an RF (sensitivity) Gain control, gradually
turn this
down as you move closer to the vicinity of the indicated signal. Continue
to do so
until you get right into the general neighborhood. By backing off the
receiver's RF
gain, it will get you right to his block. Drive around a couple of blocks
and look for
antennas. Disconnect all antennas and check strength. When the signal is
comfort-ably readable, you should be right on top of him. Report this info
to FCC. That is all you can legally do. (There IS the pin-the-coax thing
<<g>>)

If you have a CB beam at home, or 2 friends that have them, get maps of the area.
When he is on air, you and/or your friends get a beam heading on the signal and draw out a line on the map as far as possible--the bigger the map the better. Get
together and draw the lines onto a single map. Where those lines cross is where he
IS. It is a simple technique called triangulation. All of you don't have to be on the air at the same time--just have your friends draw the lines when they happen to be
on when he is. Then get together later and compare the lines. This is another effective way to find the rat.

Good Luck,

Jerry

Emissions outside the band are supposed to be reduced to a maximum level as outlined in Part 15, as well as the parts that specify the operating limits of the radiator. If these requirements are met, that would cure a vast majority of interference on TVs and radios. Many transmitters exceed these minimum standards and have out-of-band emissions well below the maximum allowed. Yes, as you said, "even the 'cleanest' rigs will generate t.v.i..", but they usually won't be heard on anything not intended to receive them.

No, read the post you responded to again. Most interference problems that I have run into have to do with devices picking up and detecting the rf - and they shouldn't. Heck, a telephone should not pick up radio waves - I don't care if the transmitter has 2nd, 3rd, and 4th harmonics the strength of the fundamental. I should mention that I am talking about POTS - plain old telephone service (not cellphone or cordless phones), yet they will pick up rf. CBers get a black eye here simply because many of them use AM - and the telephone will receive that, often with good voice quality! SSB, of course, will just sound like Donald Duck and the user of the device will have no idea of who it is on the telephone. FM will not be detected. Stereos also (I'm talking about playing cds, tapes, vinyls (anyone still got any?)) - does not have any rf circuitry in it (I'm not talking using the am/fm tuner, just cds, tapes, vinyls, etc) and should not pick up rf. Again, lack of shielding will allow a strong local signal (your next door neighbor?) to be picked up and rectified. The reality is that most problems are caused by poorly shielded consumer equipment (try selling that junk in Europe - they have standards for radiated immunity over there!). It is sad indeed that some of the amateurs want to come over to rec.radio.cb and blame all interference on cb rigs (whether stock or not) - when the largest problem is neither amateurs nor cbers - it is all that cheap consumer stuff (now often made in China) that is the problem.

Well, Jerry has a good response to you, but, unless you are extremely fortunate (or, in this case, unfortunate), almost any cb setup will have some directionality. Get a friend on the air and listen to him, drive around in a tight circle and watch the s-meter. You should find a point that either has a fairly tight peak on the signal, or a fairly tight null. Armed with that info, you should be able to get a fairly good heading on your 'problem child' the next time he gets on the air. Now drive towards his signal until it starts dropping off. Do another 360 degrees and note the direction it is comming from. Assuming you drove 3 or 4 miles, this second direction should give you a pretty good idea of where the idiot lives (within a block or so). I used to ride with a guy that could do this sucessfully very quickly. Some guy was jamming the group - so he let a couple of guys sit there chatting back and forth and hollering at the guy whilst we took off. One 360 and he said it was comming from inside the city of Rochester (we were about 6 miles away). Upon hitting Lake Avenue, he pulled the 360 again - then told me roughly where the transmitter was. He took only missed 1 turn - he turned down a street 1 block past where he should have. From six miles out, we were sitting in front of the idiots house in 10 minutes. It still amazes me. It won't be that easy for you, but it DOES work.

Thanks for your interest in the AKC store, Ken. The store products
pertain specifically to the anti-illegal CB radio movement (which is
on topic for this NG). They also poke fun at this NG and allude to
certain personalities within it (which is also on topic for this NG).
You recall those manipulated photos of Sparky on a billboard that

someone posted a while back? Or how about that whole Jock McVoobner spoof that someone posted of me? Same idea, except the AKC version is better quality - and totally within legal bounds. Regarding the "LANDWHALE" character, that is something George came up with as an exclusive design for the store, so you might address your concerns to him specifically.

OK, so the way I'm understanding it is that I go outside with my walkie talkie, and hold it so that the antenna is horizontally and not vertically like it normally would be. I'm confused on one point though. You say that the weaker signals would give me a 50/50 on his direction. But what about the other 2 signals (The strong signals). Shouldn't the stronger signals dictate his direction rather than the weaker?

yeti@cet.com says:

>If you hold a handheld with the antenna parallel to the ground and do

You'd be surprised how cooperative G-men can be when faced with a
reverse-Liberty Valance with a background in forensics.

> hmmm.... enforcing FCC regs with lethal force?

Why not? They obviously aren't doing the job themselves, except for
occasionally reprimanding the likes of N3KSO and former-WB6JAC (who
has been known to jam from inside prison walls).

> >One of my connections from detective-academy days works in the SSA's

I am surprised at how many people (even many G-men) have no idea the
SSA is HQ'd in Baltimore. The complex where our #'s and stats are
stored (mostly on IBMs 20+ years out of date) takes up a couple of
city blocks. If they'd get a Mac, they could probably fit the sucker
into a toolshed.

IGNORANT ASSUMPTION? BWAAAAAAAHAAAAAAAHAAAAAAA!
Now this is certainly the pot calling the kettle black. Twisty is Mr. Ignorant Assumption! When I challenged him to produce names, phone numbers, etc. of person he had already contacted (Yeah, right!) who supposedly contradicted my story he had the audacity (balls!) to want to charge me a fee. I suppose this is to reimburse the fee he "had to pay to get the information." BWAAAAHAAAAHAAAAHAAAA! Pull the other one!!! I doubt that ANY state or federal agency would be able to get such extensive information during a phone call. In fact I KNOW that wouldn't happen. You have to request such information IN WRITING and provide the fee UP FRONT.
Bada-bing! Lie uncovered. Did you use your credit card to pay for the "fees" or did they just take your word as good credit?

Grow up Twistyboy.

You're both wrong... 13mm are Mauser-made, originally for use against light vehicles. Makes for godawful good dumdum shells when used as an antipersonnel weapon.

BTW a lot of gun connoisseurs have never heard of 8- and 4-gauge elephant guns either, but believe me they made 'em. A couple of goose hunters even built a 2-gauge once.

Ramsey electonics sells stuff hams use for fox hunts but its like 60 bucks.
Another thing is wait eventually some truck driver will use a tire thumper
on his head.
The best way is to go to the local Ham club and see who bitches most about
cber's...That's the guy who is doing it.

Besides 60 bucks can go toward the purchase of a nice linier...Also get a
radio with extra bands. That way when some Ham tries to play naughty on the
cb bands you can hop to a freq where Hams are afraid to go:)

Not to mention the warehouses that comunicate with truck drivers. BTW many warehouses have a small "kicker" to make sure they can get through to the truckdriver who is usually asleep and turned his squelch up since hambos who hear it think" oh noo illegal commercial use is against fcc rule xxx and try to annoy people.
Small meaning in the sub 200 watt range
"Twistedhed" <twistedhed@webtv.net> wrote in message news:21442-3D2D9FF9-114@storefull-2317.public.lawson.webtv.net...
From: 123@hotmail.com (BobC)
>For a long time now I've been a proponent of getting truckers to use a vhf or uhf fm rig to communicate amongst each other on the road. What would it take to make this happen? <

Won't happen, at least in this lifetime.
It would have to be a slow transition. Owner operators won't buy into it as it's their own bucks and not many truckers or motorists are on those bands. Companies that provide the trucks with radio equipment are usually so damn cheap in the first place they would be loathe to buy anything for the convenience of the driver. As long as newer trucks are fitted with on-board satellite and tracking GPS systems and a cell phone, the company doesn't give a damn. Besides, many truckers like the DX when their ain't many to talk to on the big road. If there was an immediate need for assistance, I think the driver would feel more comfy with a cb than a vhf rig. Old habits die hard.

>How does one go about gaining popular acceptance of these radios?
Is it the radio shops themselves which are holding back? I can see their point because it would not generate repeat sales for power mics, fancy overpriced antennas etc etc. Repairs would most likely dwindle.
I doubt amplifier sales would suffer because there'd be a new niche market to sell to.
Even if someone just threw a frs handheld radio in a cute chassis with an outside antenna connector I bet it would sell if shops would push the idea.
I know this would be technically illegal but I'd be willing to bet the fcc and hamsters would love it.<

I've heard drivers on FRS before.

> No more tvi complaints from cb sets to deal with. Much less probability of drivers resorting to out of band freqs just to communicate a few miles.<

Truckers aren't largely responsible for the ones causing the interference to TV's.
The idea would have to be grandfathered in anyway. Maybe if drivers

began with a VHF radio IN ADDITION to a cb, then something could possibly take hold, otherwise, it just seems like another nonissue, except to hammies.

Actually you will get the strongest signal when the antenna is perpendicular to the transmitter. You should check this with someone transmitting from a known location. You won't get a very sharp null with a handheld so you may need to take a lot of readings, and that's assuming you get any kind of a null at all. But if you do get a null, it will be narrower than any peak you might get.

You need a directional antenna - or an array of them - so that you can
triangulate on the signal from a number of different positions...
Once you have the general area dialed in, you can roam around with a
CB with the antenna disconnected until you locate the signal at it's
strongest. Look around, you'll see his antenna...

>neither amateurs nor cbers - it is all that cheap consumer stuff (now often
>made in China) that is the problem.

AM has a couple characteristics that could make it heard on all kinds
of things. For example, if the final is overmodulated, poorly filtered
class C, or just plain crappy, you will be transmitting noise all the
way down to zero hz (just like if you turned a light switch on and off
at audio freqs, or a CW rig with a poorly regulated screen).

Connections between dissimilar metals make very poor rectifiers, and
would need either a hell of a lot of amplification for any demod to be
heard, or a hell of a lot of power to demod. Think about it: if it
were that easy to build an efficient diode, why bother with silicon?
Heck, if you need tuned tank circuit and a high-impedance earpiece
just to hear anything from a crystal radio using a quality Ge diode,
do you really think that a little cuprous oxide is going to make much
noise?

Carbon and crystal mics make fair rectifiers, but are not used much
anymore. If you are hearing demod through the phone it is probably
being amplified at the relay station. But you -still- need quite a bit
of RF power to be heard because the phone company's amplifiers are not
very high gain, and the mics are not connected to the resonant antenna

needed to receive a good signal. Regardless, the cure for this is to shield the mic and earpiece (usually already shielded by it's own case) and to choke both leads to both devices (a single bead per lead is enough). The other problem with telephones is the ring modulator, and then all you need to do is call the phone company.

If an audio device is hooked up to an amplifier, it's up you the user to avoid normal levels of RFI, i.e, use shielded audio cables, make good ground connections, etc. Note that some pieces of audio equipment are just shoved inside some wood or plastic and not shielded at all. Don't buy these devices.

If you are still getting RFI in non-radio equipment, even after all normal preventative measures have been taken, then the source of the interference is probably exceeding emission limitations.

BTW, once I had a problem where an audio device was picking up RFI because it was self-resonant at the same freq, but that is very, very rare in my experience.

Aluminum gets it's corrosion resistance from a thin layer of aluminum
oxide on the surface of the metal, preventing further oxidation. But
RF conducts on the surface of the conductor. Aluminum is not my first
choice for anything RF.

Fiberglass doesn't conduct at all. The antenna is a copper wire inside
the fiberglass, or wound outside the fiberglass and covered with some
heatshrink. The problem here is that when humidity/water gets trapped
between the fiberglass and the copper, it corrodes the copper very
quickly and thoroughly.

As said before by another poster, stainless steel is the way to go.

No excuse, a cber should know the rules. It should be obvious to
the most simpleton that when you purchase a cb radio there are
going to be rules governing that service.

BORING! Besides, doppler does nothing a good loop can't do, except you
don't turn it manually. If you want to spend $1650 just to avoid
rotating a loop, that's up to you.

That is their problem, they should learn to read and read the
rules. It still does not excuse them from operating illegally.

I guess the cbers (freebanders) are just so stupid that they don't
know they can cause intentional by running excessive power to
moded rigs, overdriving amps and splattering over several Mhz, and
all this on frequencies they are not authorized to use.

> Yes, I have a higher standard for Hams than for CBers. That is because

Still does not excuse a cber for operating illegally.

The cber is also agreeing to abide by the rules governing the cb
service when he purchases and uses a cb radio. Just because he
hasn't taken a test and issued a license does not make it any less
illegal when he breaks the rules. It is the duty of the operator
to know the rules.

> One must admit, ignorance is a much greater probability with a cber not

He should know that there are only 40 channels in the cb service,
if he doesn't then that is his own fault.

When get to the point that the signal gives you maximum signal
strength (not pounds, I don't know where cbers got this expression
as radio signals do not come in pounds), disconnect the coax from
the radio and you should still be able to pick up the signal but
much weaker . Keep driving, if the signal gets weaker, then turn
around, when you go by his house it will suddenly get very strong.

903. Re: truth about RF interference

Yeti is correct, all RF oscillators generate a certain amount of "white noise." However this noise is filtered, for the most part, by the rig's internal circuits. By the time the signal gets to the antenna jack the "noise" should be undetectable in relation to the transmitted power. It isn't the "noise" generated by the rig that causes the problems. Usually it is the receiver (TV, cordless phone, whatever) that is the cause of the problem. Most of the consumer electronics made today is very bad about filtering and keeping RF from coming in where it shouldn't. I just purchased a brand new 900MHz cordless phone. 900Mhz, my HF rig shouldn't interfere with this, RIGHT? Wrong. It transmits and receives 900MHz signals but these signals are mixed and converted to lower frequencies throughout the receivers so that they can be amplified and converted to audio. It's these places where RFI occurs. USUALLY it is NOT the fault of the transmitter. This new 900MHz cordless phone would RING whenever I keyed up on 12 meters (24.9 MHz). Why? One of the IF channels is on 24 MHz. You would think that 24MHz wouldn't get into the receiver as far as the IF amps. It didn't. The interference was coming in through the power cord. All it took was wrapping a few inches of the power adapter cord around a toriod core.

RFI is RARELY the fault of the transmitter. The FCC is fairly paranoid about this when it comes to consumer electronics (transmitters). I don't mean to come to the defense of the transmitter manufacturers but where do you get your information that "Many transmitters exceed these minimum standards?"

You can do it by holding the handheld close to your body and turning slowly
in
a circle. When your body blocks the signal (null), the offending signal
would be
at your back. I'd do that first, then check in the "forward" direction when
you
get closer in. You can "attenuate" (reduce) the incoming signal) by
grasping the
antenna with your hand, removing it, or turning down the received RR gain if
the
radio has one.

You have a point, and iron-oxide rectifiers were once used in
abundance (and are often confused with selenium rectifiers). But they
are efficient only when manufactured under controlled conditions. Same
story for thermocouples: two dissimilar metals will develop a
potential across the junction, but it's very, very small for common
metals. It takes a certain amount of refinement in order to get the
efficiency of the cooler sitting on top of your computer's processor.

But there are problems with metal-oxide rectifiers when used as RF
detectors. They tend to show a linear response with low power (not
good where non-linear response is required). The biggest problem is
their lack of frequency response. They just simply do not make good RF
rectifiers. Have you ever seen a metal-oxide rectifier used as a
detector stage in a radio? Nope.

>and/or loose.

Since the topic was about RFI, I assumed an otherwise functional
circuit. Regardless,

A loose connection will make noise all by itself due to intermittent
contact or arcing (yes, even a phone line will arc over a very small
distance). And an open connection puts the line at a high impedance,
which makes it suseptible to harmonics from house current, motor
arcing, and all the other normal sources of RFI. Both conditions mess
with the terminating impedance of the pair, which makes it open to
much more of the same. But at 30pF, 25 ohms/1000ft and the 6dB/octave
rolloff well below HF, you aren't going to get much RF from a twisted
pair even if the termination is open or shorted.

You cannot "easily assume" a corroded or loose connection, but when
trying to troubleshoot an RFI problem it's a good idea to start with a
good circuit.

>---The interference is not amplified by the CO before it gets to the house.
>The interference is generated locally on the line.

Telephone service usually has talkback, which means there is an
amplifier somewhere along the line.

>---Most homes have miles of old unused phone lines still connected to the
>entrance panel.

What state do you live in? Around here old and loose wiring is
considered a fire hazard. You might find some old houses even with the
old LV lines, and even a few with the very old cotton wires and
ceramic standoffs, but most of the houses have already been cleaned up
during home upgrades.

> These lengths of wire act very nicely as antennas and will
>couple the rf right into the bad connection where it can be demodulated.

I agree. If they haven't been removed from the house, and they are
still connected to your phone line, I suggest they get someone to
disconnected them ASAP!

>Although the phone company generally uses twisted pairs, the average home
>owner/do-it-yourselfer doesn't know enough to follow suit. These non-twisted
>pairs have a propensity towards conducting rf.

As does any reasonably straight wire. I'll even add that although many
of these wires were installed at or below ground level, they can still
work as antennas (one of my first experiments in radio taught me that
one).

>---The phones in use today are not well shielded and being mostly solid
>state will easily be overloaded by modest rf fields because they are
>attached to very long antennas.

Now that's a stretch. A random wire antenna won't pack enough punch to
knock out solid-state electronics, simply because it probably isn't
resonant at the frequency of interference: i.e, a longer wire doesn't
necessarily mean a bigger signal. Even if it IS resonant, it probably
still won't have enough juice to zap a protection pair. Matter of
fact, I know for a fact that you almost have to key right into an
input to blow a protection diode, and nothing short of a lightning
strike is going to nuke a bipolar input.

>retightening of connectors helps keep out rf.

That sounds good to me. But I REALLY need a reference for that other
statement -- are you saying that cheap amplifiers are left unshielded
in order to burn in the silicon? What about the transistors in cans?
If the RF for the sheilded transistors comes from induction in the
leads, then doesn't that lead to rectification, amplification, and
eventually RFI? I think you are a very misinformed, my friend.

> just to hear anything from a crystal radio using a quality Ge diode,
> do you really think that a little cuprous oxide is going to make much
> noise?
---I disagree with your conclusions here.
---It requires very little power to excite a oxidized connection into acting as a diode and retransmitting a new batch of frequencies. If the metals or wires attached to this diode come close to resonance on any of these new frequencies then you have an efficient antenna system from which you may intefere with many different radio services.
---Even a small signal in the -100 to -70 db levels may interfere with other services. We cannot simply think of just AM, FM and television systems. There are many other services which exist and regularly use signal strengths in these levels as normal inputs to their receivers.

> case) and to choke both leads to both devices (a single bead per lead
> is enough). The other problem with telephones is the ring modulator,
> and then all you need to do is call the phone company.
---I disagree here as well.
---When there's a complaint of phone interference you may easily assume there is a corroded/loose connection somewhere in the line either inside the house or more likely outside at the entrance panel or on the pole. I had the phone company out many times to clean and retighten the screw connections around the neighborhood. These are copper alloys and act as diodes very nicely in the prescence of even 5 watts when allowed to get badly oxidized and/or loose.
---The interference is not amplified by the CO before it gets to the house. The interference is generated locally on the line.
---Most homes have miles of old unused phone lines still connected to the entrance panel. These lengths of wire act very nicely as antennas and will

couple the rf right into the bad connection where it can be demodulated. Although the phone company generally uses twisted pairs, the average home owner/do-it-yourselfer doesn't know enough to follow suit. These non-twisted pairs have a propensity towards conducting rf.
---The phones in use today are not well shielded and being mostly solid state will easily be overloaded by modest rf fields because they are attached to very long antennas.

> If an audio device is hooked up to an amplifier, it's up you the user
> to avoid normal levels of RFI, i.e, use shielded audio cables, make
> good ground connections, etc. Note that some pieces of audio equipment
> are just shoved inside some wood or plastic and not shielded at all.
> Don't buy these devices.
---Just because it has a wooden case and no real shielding doesn't make the device bad or unusable. Most home devices require substantial invasion of rf to move the operating points of the semi-conductors. More often it is the poor assembly of the interconnecting cables which allows rf invasion. Loose or oxidized connectors are a good place to start cleaning up the house. Avoid long cable lengths which may be resonant on locally used frequencies. Sometimes even coily cords are self resonant on certain locally used frequencies. Chokes and bundling excess cable is good practice. Occaisional retightening of connectors helps keep out rf.

Unlike some other people on here with inflated opinions of their own self worth, I'm not about to claim any special talent or skill. Twisty is rather obvious when you look at the pattern of his posts, and the type of "thinking" that must go on behind it. I merely summed it all up in one post, so that others will hopefully understand and not get too worked up over the things that twisty puts forth. He's simply not worth the effort if a meaningful debate is your goal. In order for that to happen, you have to intellectually honest, and open minded enough to at least acknowlege the opposing point's validity. To make a bizzare point that it's ok to selectively ignore laws, yet fail to understand why other people might have a hard time with this, underscores the depth of twisty's sociopathic tendancies.

One thing is certain, if there was ever a case for mandatory sterilization, this would be it. That is on set of genes that I wouldn't want to see proliferated.......

Twisting meanings and misstating information, and then calling a person
a liar for not conforming to your "modified" definition is not a valid
point.

> >

Psychological comment: Anyone that is so concerned with verifying a post
made on a USENET newsgroup, that they actually paid money to do the leg
work, has some serious problems recognizing priorities in their life.

More likely: The "fees" arguement is just another excuse to attempt to
sidestep the responsibility of verifying your claims.

>
> So then you HAVEN'T actually made contacts to "prove that I am lying." I
> understand now. YOU are lying. Or perhaps, again, "lying" is too strong of
> a word. You were misleading, you misrepresented what you had actually done,
> YOU LIED!

Debate tactic 101: When attempting to score tactical points defending a questionable stance, it is often the tactic of a weak debater to put the opposition on the defensive. That way the opposition spends most of his time countering these attacks, rather than promoting his side. Usually, this is accomplished by demonizing the party or subject that the debater stands for, or accusing the other side of lieing. When making the claim that the opposing part is not being truthful, you'd better have irrefutable evidence to back it up, and be prepared to share it. Otherwise it is taken as heresay.

>

> problem too. I don't "personally dislike" anyone in this newsgroup. I
> know, you aren't paranoid but everyone thinks you are. Poor little Twisty,
> thinks everyone hates him.

Another psychological observation: The recurring theme of "personal dislike" is also a common manifestation of the truly paranoid and those with low self esteem.

Another recurring trait here is Twisty's insistance that others cannot focus on the issues, or follow his chain of thought, yet it is he that changes the point of focus, often into completely unrelated and irrelevant areas. He is free to change the direction of the "debate", yet if the other party attempts to pull the debate back on track, Twisty is quick to accuse them of being "incapable of staying focussed".

>
> >
> >>So, lets have names, places, phone numbers, dates and times that you

>
> General consensus? Get Real Twistyboy! The only "general consensus" has
> been people who think you are deranged. Only Modeaholic (who I think is
> you) has come to your side.

The whole issue is laughable. Assuming that he is being truthful, and he made some calls and inquiries, that did cost some money (And why someone would go to that length over a newsgroup debate is scary enough), the money is already spent, all we want are the names and places so that we can spend some of our money doing the alleged same thing. There needs to be no further expendatures on Twisty't part. Just name the names and numbers.

Of course we already suspect that this is all a smoke screen in another sequel in the continuing adventures of Walter Mitty, AKA Twistedhed.

Source record: 129902

Hello Moparholic:

I would say they are worth getting, many times people just want them off their roofs. I have several Penetrator 500 5/8 Antennas, But one is a product of being made from a few, and its in great shape.

The Upper and Lower Plastic Insulators, and the Plastic Tuning wire Stand-off's are still available from Hy-Gain, for only a few dollars.

The Tuning wires can be replaced by Tinned 12 or 10 gauge wire. The Top-Hat Assembly can also be easily repaired, with 1/8" OD Aluminium Rod.

One of the biggest problems with the HY-Gain Antennas, is that Hy-Gain figured a very smart way to make there antennas resilient, meaning strong but flexible. They do this my "Reduce Swaging" the Aluminum Tubing, reducing the tubings OD & ID size, to accept the next smallest Tubing size, in 1/8 OD increments. Such as necked down brass riffle cartridges.

Example: Their 7/8 inch OD / 3/4 inch ID tubing is Reduced Swaged to accept 5/8 inch OD tubing. This Reduced Swaging saves them big money in material times a gazillion antennas, Very shape indeed.

However if the Penetrator 500 Reduced Swaged Tubing is damaged, it can be replaced with the same size OD tubing, and a short adapter can be installed to allow the next size smaller tubing to be installed, it just takes a extra hose clamp. I have repaired many Penetrator 500's using this technique. The only exception that I have run into is the 7/16, that is used ant the end of the vertical element, and the end of the ground plane elements. A piece of 1/2" OD x 72 inches long, tubing can be used, but the Reduced Swag on the mating end of the 5/8 inch tubing will have to be cut off a few inches. NO big deal.

The Penetrator 500 was the only CB Antenna that I know of that was rated from the manufacture to handle 1500 watts coming out of the gates. Ten-4.

I am sure this was the result from Hy-Gain getting some heat from the antenna users, that where burning up their CLR-II 5/8 Wavelength Antennas, that had a Mickey Mouse Impedance Matching Coil on a small circuit board. I am sure the power from the Hy-Gain Linear Amplifiers was enough to take out the CLR-II Antennas. Which drove the 1500 watt rating for the new design Penetrator 500.

Socialism attempts to correct the perceived injustices to the poor, at the expense of the rich. Socialism attempts to level the playing field economically. The problem is that the standard of living level is not at the BMW driving 4000 sq foot home level. It is a level that is far more modest.

Socialism stifles creativity and ambition. If you can "earn" as much money being a janitor, as a rocket scientist, what's the incentive to become a rocket scientist?

What makes the USA such a great place, is that opportunities are not capped by an oppressive govenment. You are free to pursue your dreams. You can take whatever talents that you have and hopefully market them into something that will bring your comfortable wealth.

The downside to freedom is responsibility. You are free to make choices, but you are also responsible for the outcome. If you waste your youth playing video games, and fail to achieve anything more than a McDonalds salary, it's nobody's fault but your own.

Socialists attempt to deflect the failings of the poor, from their own responsibility, to the responsibility of society. The deadbeats of society will be lifted by their coat tails by the government, at the expense of the achievers.

In my experience, people who favor socialism are either:

A. Young, naive, and brainwashed by some 60's hippie leftover that is now a professor at some liberal college.

B. A whiney loser, who somehow feels that they are a victim, and that the failings that they've endured in life are all someone else's fault, and that if only the government would swoop in and save them, they'd be much better off.

You won't hear people like Bill Gates talking about the benefits of socialism.....

For that kind of money I would suggest they purchase a 'JAY-MADE' antenna instead.

I used to think the Penetrator 500 was the best CB antenna ever made until I got a close-up look at one of yours!

Keep up the good work Jay!

You can put your 2510 on eBay. Just make sure you put it under "Ham
Transceivers" not "CB". Also make sure you don't advertise it here,
because there are a few people in here that get off on sending
complaints to eBay.

i wonder how long it will be,before somebody with a little extra cash,hires a lawyer to take these "radio crusaders" to task for trying to stop the sale of "legal" radio gear. it would be easy to find out who is making the complaints (subpeona to accuser, so accused can face his accuser)
next,easily demonstrate that the 2510 (or any other f.c.c. compliant radio for that matter)is completely legal for sale in the us. and take the accuser to the cleaners for defamation of character,harrasment,and any other fun things your lawyer can think of to throw at the nit wits. :) cool idea,huh?
all we need to do is get one of the "worst offenders" on the group to offer a radio for sale that the antis are convinced is "modified"...let them hang their asses out in the breeze by making an accusation of wrong doing.....and "wham", hitem with everthing your civil rights lawyer can hammer them with. you could also go after e-bay.....for interfereing with interstate commerce.....whoo thats a biggie. might get some real bucks out of that one.the word "racketeering" mean anything to any of you. :) :) :) heee heee. gunslinger

936. Re: Kevin Muenzler, WB5RUE claims 27 radio busts this year alone,...

Source record: 129915

From: wb5rue@yahoo.com (Kevin Muenzler, WB5RUE)
Muenzler wrote today:
>BZZZT! Wrong. I never said "Official FCC observer." That statement is a product of your imagination. <

But said in his very first post in the thread:
>"It was me and 14 other FCC Official Observers who work the San Antonio/South Texas area"<

Then, when shown he indeed said he what he claims he never did, failed with:

>OK, I usually<

But in your post you said "NEVER". Now you are attempting to say "USUALLY".
The two have separate meanings and are NOT interchangeable. So we now have you lying after I told you that you had said it. You instantly denied it (you LIED).
I had to actually show you your own words, and now you say you didn't really MEAN it that way, which is exactly what I have been shwing all along...that you really don;'t know what you mean. Your lies have serously muffed you up, and you sit and attack the messenger for pointing it out and merely asking confirmation..

> don't refer to Official Observers as "FCC Official Observers" but if you really want to get technical <

No, I don't want to get technical, but i am certain you do, as your mangy tail is caught in the door and you would rather talk about "technicalities" while accusing ME of semantics.
No, we will stay with the issue at hand.....YOUR words, more of what you claim you NEVER said.

>It was me and 14 other official FCC observers..<

we are "FCC Official Observers."

>snip<

It doesn't matter if you call yourself keystone cops, the fact remains that you are confused and lying like hell. ANOTHER claim you made, then claimed you didn't, then were shown where you did, and are swallowing crow as quick as your mouth will allow me to shove it in.

And they are not semantics, Kevin. They were lies and shown as much. I am beginning to wonder if you even know what semantics are. Now you are attempting to debate another subject, one of what you MEANT to say, one

of which you are now attempting to imply you meant. But the issue was, and still is, you, are a liar. You asked for proof, I gave you several examples. You call it semantics, the fact remains that you referred to yourself as an FCC observer, then turned around and lied about it, claiming you NEVER said it, that it was a figment of my imagination. I remind you that you said it, again you deny it, and need shown it. Now that you were actually shown your lie, your attempt at cleanup is too much too late, but it is great fun watching you frolic in your own fecal matter and stutter like Dogie does when you're shown your lies.. It would have been much better for you from the begining if you wouldn't have lied. Instead of getting over yourself when I called you a liar, you had to go and prove it several times over. Good show, old chap, good show.

>Check out: http://www.arrl.org/news/stories/1999/04/08/3/ The title of this article is "FCC Official Acknowledges OOs Really Are 'Official'" Also: http://www.arrl.org/FandES/field/org/oo.html No, we are not paid by the FCC to technically (you seem to love technicalities) we don't work for the FCC. We are volunteers. The results are the same, busted illegal operators.<

Neverthelessm you said you NEVER said it, that it was a figment of my imagination. Not only have you demonstrated your fondness for lying, but you have demonstrated beyond a shadow of doubt that you can not be impartial when it comes to legal issues or agendas and have no business being in a position of authority. Your meted insults may serve well filed with a complaint concerning your integrity and ability to remain fair involving anything that calls for offical judgement on your behalf.

Moving on...we have your amusing snap:

>"BZZT! Strike two. I never claimed a single bust. Again, a product of your imagination."<

But again, from your first post, we have not only you denying the "prosecutions" but actually CLARIFYING that they were busts.
Let's see...

""I don't believe I ever said successfully prosecuted I said "busts." If I did then it was misleading and unintentional." <

>You are taking me out of context again.<

Again? If anything, you took yourself out of context, but since that is an improbability, it is safe to point out that they were deliberate lies They may not have been all malicious at first, but when you become so angry that you deny everything you said, it shows you a liar.
What part of you claiming you did make a bust then you didn't make a bust, or
what part of you denying you never called yourself an official FCC observer when in fact you did and denied it, or what part of your other lies do you feel were taken out of context? I mean, YOU made the claims, then deny them. Are your communication skills that poor that you fail to

express yourself, can't find the correct words? Attempting to blame your lies on your poor communication skills might fly with a newbie, but you've been around for a while....lying. BUT, you run on ahead and try and convince the world at large that you were quoted out of context each and every time. Call me when you think you were successful.

>I never said that I made busts. <

Nope, you didn't. What you actually wrote, verbatim (again) was:

"BZZT! Strike two. I never claimed a single bust. Again, a product of your imagination."<

But, we find you CLAIMING, it WAS a bust, after yet ANOTHER denial that you never said it...
To wit:

"I don't believe I ever said successfully prosecuted I said "busts." If I did then it was misleading and unintentional." <

Oh, so you said it, but didn't mean it, but didn't mean it, but said it, but meant it and didn't believe you said it, then just denied it, and are back claiming you didn't mean it when in fact have been shown you said it..

>I said that I participated in busts. <

And then made several posts that they weren't "busts" at all, that the word "bust" was my choice. I once again showed that to be another in a long string of bold-faced lies, and now you have flip-flopped yet AGAIN, and are attempting to convey and palm off your twisted definitions of busts, claiming once again, that they did happen, but not in the manner in which you applied the term. That's all nice and stuff, but, just like you denying calling yourse;lf an FCC observer, that really isn't the issue, is it Kev 'ol boy? No, the issue is (again) many of your claims have been shown to be lies. Where there is smoke there is fire.

>Only the FCC can make the busts.
Like I have said a couple of times, me and several others provided evidence for these busts. We never made the busts. You are arguing semantics and taking me out of context. <

You never made the busts, but you sure lied like hell. You said you never said things, Kevin, and have been shown you did. You can't even own up to them and fail miserablly trying to worm your way out of lie after lie.
Lie upon lie upon lie....

>Twist upon twist. Truly a legend in your own mind.<

Yet another hammie truly obsessed and concerned with what a lowly cber thinks of himself. You will fare much better around here, Muenzler, when you learn this isn't a personal issue. Maybe people like you and Frank have no family or life so you make us your world, and assign likes and

dislikes to us all. You really need to get over yourself. I am just now learning this fractured ego thing in hammie radio has quarantined more than just certain nocodes. I believe you're the highest ranking AKC member I have seen to date that is so obviously angered at what he has no control over. You need a ranking, since you obviously are the highest of the pioused.

>I'm still waiting on those phone numbers, names and court names. <

And I don't work for free.
I'm tempted to post a single link proving you wrong yet again with another claim, but you'll just call it semantics.

>But I see that you are now focusing on semantics. <

<g>

>I guess you were
lying about getting proof that I am lying. Kevin, WB5RUE <

Sure , Kev, you didn't lie.
And you never denied saying all those things you did, but didn't mean (chuckle).
Victory is definitely yours.

From: wb5rue@yahoo.com (Kevin Muenzler, WB5RUE)
Looks like Twisty is the "coax police" too.

937. Re: Kevin Muenzler, WB5RUE claims 27 radio busts this year alone,...

Newsgroup: rec.radio.cb

Source record: 129917

What I have done, is verified that the
procedure involved with the FCC takes much longer than six months for an actual court appearance to take place, let alone a conviction by the FCC.

>Please give us names, phone number and the times that you called so that we can all verify this. <

Certainly. AS you claimed, these services cost fees. Provide a valid contact number and I can call you and we can discuss my fees.

>So then you HAVEN'T actually made contacts to "prove that I am lying." <

Ask a lawyer that worked for the FCC is your time frame is even remotely possible. There is no chance of your lie being even remotely true. That won't cost you anything, as there is a hammie readily accessible that loves to disburse wisdom concerning his golden days with the feds. All you gotta do is ask, Muenzler, not dance.

>I understand now. YOU are lying. Or perhaps, again, "lying" is too strong of a word. You were misleading, you misrepresented what you had actually done, YOU LIED! <

(Chuckle) Hehhe..Sorry to burst your bubble, Kevin, but you're gonna have to wake up much earlier than that if you are going to look for something to personalize.

>Did you "make calls" that were unable to verify my claims or did you make calls that were able to contradict my claims. There is a BIG difference. <

This is getting better by the day. Give you ego trippers enough rope and ya'll piss all over your own legs after the selfhangin's. Here's more fodder for your featherless cap..if the FCC brought anyone to court AND convicted them as you claim, within the time frame you claim, it would have been the FASTEST convictions for cb or hammie related behavior to date.

>You see I have never seen your brain, I don't know anyone else who has ever seen your brain. In fact I doubt that anyone in the entire world has seen your brain. So we can't verify that it exists at all. So if we use your logic of "unable to verify" then your brain doesn't exist. <

Your trouble remaining focused on the subject and attempts at making your agenda one of spewing your venom and insults my way is dangerously close to becoming trollish.

But everyone that frequents the ng can see the lies you tell and lie about some more. Do you have an alcohol problem, Kev? You seem to be incapable of posting and focusing on any issue except for your intense personal dislike of me.

>They, like I have said, can see that you are the TwistMeister.<

They most certainly can, Kev, and all that have met me and most that have been around here any length of time also know I don't lie...period. To think any antics from you would alter that, merely illustrates your ignorance and highlights the false importance you attribute yourself. Delusions of grandeur.

> So you
say that I am incapable of focusing? <

Absolutely! Of course you are. You have now resulted to insults in each of your postings.
I asked for a way to verify your story, giving you the benefit of the doubt. You became immediately hostile toward me, hurling insults and asking me to verify that you lied. In other words, the world should take your word for it, even though you can't produce anything. You made a claim, can't produce Jack, and ask ANOTHER to prove you lied, when all that was asked for was clarification.
You have since resorted to making your focus about me, not your claims. That makes you unable to focus properly on the issues at hand (AS much you would like me to be the issue, alas, I am not). You are trying way too hard to make me your issue. It gets better...if I am incorrect about your uncontrollable behavior concerning your insults and attempts to make the subject one of myself, and the attempts are conscious, that makes you a troll.

>I have been trying my best to follow your twisted "logic," claims and accusations. You seem to have a paranoia problem too. I don't "personally dislike" anyone in this newsgroup. I know, you aren't paranoid but everyone thinks you are. Poor little Twisty, thinks everyone hates him. <

Once again, this isn't a popularity contest, as much as your wounded ego apparently needs one. You claim one thing and say another, just like all your posts in this thread. If you can be so impartial, demonstrate so and hold your insults. You must walk the talk, Muenzler, and you obviously don't.
The greatest insult, is you undermining the entire ng's intellect. You see Kev, if you didn't lie, you wouldn't have had to resort to defending each and every little self-contradiction you made and ran to so desperately. The group can indeed interpret what they read for themselves, Kev 'ol chap. Even though we are a bunch of low life cbers, we don't buy into your "are you going to believe what I tell you or what you saw?" mentality that obviously has worked on lesser beings for you in the past. Your lies and denials are there for all to see, just as you meant them. If they were all to be compiled, how many you reckin you

told since the beginning of the thread, 'ol chap? Add the insults and..wow..they outnumber the lies..slightly.

>So, lets have names, places, phone numbers, dates and times that you called these places to check up on me. I don't want EMails or web sites, those can be faked, I want names and phone numbers so that I can call them. If you can't then by your standards you are a liar. Kevin, WB5RUE<

Following the thread the last few days, I'm not at all cocerned with the general consensus, but you should be. Nevertheless, I even accept personal checks, but there will be ten day hold on all out of state checks and a 25.00 NSF fee.

>General consensus? Get Real Twistyboy! <
I
know, you use the word "boy" as it
must make you feel like a man. If referring to me in such deferred ways boosts your ego, I am glad to be of service. What this ng needs less of is another angered hammie that feels like a lowly cber had a way bigger member, er, number, uh..member number than he.

>The only "general consensus" has been people who think you are deranged. Only Modeaholic (who I think is you) has come to your side. <

Au contraire. This is a cb ng and I am way more representative of the average cber than you will ever have a clue. Your beliefs are radical, condescending toward cbers (be careful here, you have left a slime trail of slams against cb over the years..I'd go check the archives before you need another helping of crow jammed down your chickenhawk neck.)
and not popular except with a minority of angry hammies,,made up of the likes of yourself, Frank, Lelnad, Yrac, the finnish funny guy,
and N8WWM. That makes you a minority, and me of the general consensus. Your quick acceptance into the AKC with those who threaten and harass by continuing to divide the service by the placing of "sides" is now an expected trait of you. Division is what the AKC stands for, and the sad part is, I don;t even think you realize when you have been had.

>But you, apparently, already have made those phone calls so you have already "paid the fees" right? Oh, you want reimbursement? I think that this is just another attempt to cloud the issue that you are so wrapped up in yourself that you can't see when you have been cornered. <

What you think doesn't matter to anyone. IF you wish me to perform a service, you will pay accordingly.

>There's no way out of this one. Put up or shut up. You made claims that you had some sort of proof that I am lying.<

Yes, but only after you lied.

>Let's have it. Names of who you called, phone numbers of who you called and the courts you called.<

Certainly...after you provide proof of your claims...after all, YOU made the claims first, I merely asked you to clarify first. I qualified several of your lies with proof, and granted, YOU have even qualified several of your own lies with proof, but I asked for a clarification first, and you failed to produce. Now you are attmpting to ignore that inquiry, but ask the same of me....hilarious.

>But obviously you don't have them<

Which is the reason you went bezerk in the first place..you obviously don't have any proof.

>and there is no way in God's green earth that I'm going to send you a single penny. <

Well, I kind of figured that. A perfect example of someone who wants something for nothing...asking for handouts, wanting someone else to do the work because you're too lazy, or worse, can't figure out how. Typical freeloader.

>GET REAL Twistyboy!
ROFL!!!! BWAAAAAAAAAAAHHAAAAAAAAHHAAAAAAAA! <

Ez, there, don't wanna physically hurt yourself..you already killed your credibiltiy.

>I can hear everyone else in this newsgroup laughing too! <

Indeed we are laughing, Kev, but you have a delayed reaction...that must run hand-in-hand with your poor recall and retension ability, as we have been laughing since day one when you made the claims. Newsflash Kev, ol chap: Many in here are way more educated in the ways of the FCC than you give credit. You're part of the gag, Kev, and haven't even realized it, as you continue to assume the group has no clue concerning enforcement. It is becoming quite clear that it is you that not only lies concsistently, but can not focus and has no recall ability, and can not express yourself adequately without going back and saying that even though you said it, you didn;'t mean it. You have created quite the little sty for yourself and I am enjoying it so.

>Except maybe
Mopedaholic that is. The only thing that exceeds your ego is your audacity! I doubt that you have the guts to send me your real name and address anyway.
Kevin, WB5RUE<

You already expressed your inabilty to pay, so what does my name or addy have to do with anything? Ask Frank, he knows where I live. He figured it out after I posted directions to my front door.

>God must love stupid people, he made so many of them!<

Too bad ignorance isn't painful.

From: wb5rue@yahoo.com (Kevin Muenzler, WB5RUE)
Looks like Twisty is the "coax police" too.

It does happen. More often than you think. Proximity to the transmitter can make a whale of a lot of difference in the field that is picked up. A line close to a quarter wavelength can also cause problems. I've seen more than a few instances of this - including organs that picked up stock 5 watt cb rigs when driving in front of a club (one was very loud, obviously excessive power; the rest were very audible and were likely stock - this was back in 1975).

73 from Rochester, NY

The cber is also agreeing to abide by the rules governing the cb service when he purchases and uses a cb radio. Just because he hasn't taken a test and issued a license does not make it any less illegal when he breaks the rules. It is the duty of the operator to know the rules. <

Yup, no doubt, it is. But I offered up a plausible possibility for how it could happen. "What if'" scenarios all of a sudden aren't any good anymore? <g>
You're absolutely right, there is no excuse for not knowing.

>He should know that there are only 40 channels in the cb service, if he doesn't then that is his own fault. <

Well, I dunno about all that. What if (Please pardon it this one time and I swear I will never use the ridiculously lame losing line of "what if" again) the guy is a new ride along or driver who has never been into cb...there are probably whiz bang young tech kids that for one reason or another have never even seen a cb, let alone know where in the freqs they may operate, or even how. SO, he's out doing his first solo run but with other drivers in their own trucks. They approach a big city and the noise from the damn hammies with their big radios on 19 is just causing terrible communications for the drivers. So the driver says to the rookie to "switch your PA switch on and off 2 times." The guy could think he is on a company channel. After all, them Mayflower drivers are worldwide in skipzone..even gots dey owned channel!

Hello Dave, It's good to see you washed up hammies lending each other support, even if you must resort to trolling and insults. Y'all losers that had your clocks cleaned in here by us lowly cbers need all the help you can get. Y'all take care there, now, and try not to pee on each other.

945. Re: Kevin Muenzler, WB5RUE claims 27 radio busts this year alone,...

Newsgroup: rec.radio.cb
Date: 2002-07-12 17:14:59 UTC
From: twistedhed@webtv.net
Message-ID: <15083-3D2F0E93-290@storefull-2316.public.lawson.webtv.net>
Source record: 129926

Dave Hall, upon demonstrating his obsessive compulsive disorder ("I ignore twisty"
"I don't ignore twisty") ran to the now-demised credibility of another angry hammie that agree that insults and failed attempts at making a topic of a personal nature is effective commmunication from a licensed hammie, erred with:

>Psychological comment: <

Like you're qualied. You can't even deal with change, let alone the psychotherapy you are so in need of due to the self-admitted physical abuse you suffered as a child..or was that Kevin who had his head slapped? One of you did, and claimed as much.....you AKC are so much alike I guess it doesn't really matter which. The end result is the same with the few of you that exist.

>Anyone that is so concerned with verifying a post made on a USENET newsgroup, that they actually paid money to do the leg work, has some serious problems recognizing priorities in their life.<

I agree.
Muenzler is the one that originally mentioned money needed to exchange hands in order for information to be had.

>More likely: The "fees" arguement is just another excuse to attempt to sidestep the responsibility of verifying your claims.
So then you HAVEN'T actually made contacts to "prove that I am lying." I understand now. YOU are lying. Or perhaps, again, "lying" is too strong of a word. You were misleading, you misrepresented what you had actually done, YOU LIED! <

>Debate tactic 101: <

Demonstrating your past impartiality, you can not effectively give advice on debate, let alone any type of effective communication. Again ironic that a few of you angry licensed hammies are so poor with communication skills.

>When attempting to score tactical points defending a questionable stance, it is often the tactic of a weak debater to put the opposition on the defensive. <

Again, you aptly demonstrate this is a win/lose situation to you, perfectly illustrating your childish mindset and attempts at division among radio enthusiasts.

>That way the opposition spends most of his time countering these attacks, rather than promoting his side. Usually, this is accomplished by demonizing the party or subject that the debater stands for, or accusing the other side of lieing. <

Do you consider "demonizing" the same as repeated insults, Hall? Never mind, it doesn;t matter what you think, you've had your head handed to you many times.

>When making the claim that the opposing part is not being truthful, you'd better have irrefutable evidence to back it up, and be prepared to share it. Otherwise it is taken as heresay.<

Actually, when the claim can't be verified, it is discarded. This is the way American media works, not the way you wish it to.

>Did you "make calls" that were unable to verify my claims or did you make calls that were able to contradict my claims. There is a BIG difference. You see I have never seen your brain, I don't know anyone else who has ever seen your brain. In fact I doubt that anyone in the entire world has seen your brain. So we can't verify that it exists at all. So if we use your logic of "unable to verify" then your brain doesn't exist. <

Hey Hall, would the above words by Munzler qualify to you as "demonizing", or would you make an allowance for that because of your inability to remain impersonal and impartial and on topic?

But everyone that frequents the ng can see the lies you tell and lie about some more. Do you have an alcohol problem, Kev? You seem to be incapable of posting and focusing on any issue except for your intense personal dislike of me.

>Mr. Pot, meet Mr Kettle. <

I have no reason to dislike anyone in here. I don't allow myself to even think beyond such things,it is mundane trivial matter. Doesn't matter who it comes from..if an issue is a lie, I will comment on it..the name on the email means squat,,except to losers like yourself, of course.

>Try to tell a nut that he's nuts and he'll tell you that you're crazy..... <

And this continues to interfere with your well being and mental status WHY?

>They, like I have said, can see that you are the TwistMeister. So you say that I am incapable of focusing? I have been trying my best to follow your twisted "logic," claims and accusations. You seem to have a paranoia problem too. I don't "personally dislike" anyone in this newsgroup. I know, you aren't paranoid but everyone thinks you are. Poor little Twisty, thinks everyone hates him. <

--
>Another psychological observation: The recurring theme of "personal

dislike" is also a common manifestation of the truly paranoid and those with low self esteem. <

Or it's arrived at through a more laymen's sort of process...by the repeated personal insults in each of the posts......chuckle. You're probably the same way on the air, Hall, ...a hatemonger,,,spewing bullshit you don't evenbelieve..hahah!

>Another recurring trait here is Twisty's insistance that others cannot focus on the issues,<

Not others, only malcontents, such as the kennel club,,,but that isn;'t my interpretation, it's the rest of the world's observation., or are you far in denial you can't see that either?

> or follow his chain of thought, yet it is he that changes the point of focus, often into completely unrelated and irrelevant areas. <

Sort of like how Munzler was being forced fed big blacjk crow then tried to make the topic about ME, then you joined
in and haven't even touched on the subject that was being discussed, but jumped on the
poor boy's bandwagon of insults? Yea, we know your loser ways, Hall.

>He is free to change the direction of the "debate", yet if the other party attempts to pull the debate back on track, Twisty is quick to accuse them of being "incapable of staying focussed". <

How did I change it? You changed it. Kevin lied and was asked for proof. He changed it several times to that of ME, as you are now failing with. It just goes to show that Munzler was drowning and your attempt at helping him now has you covered in the same smelly matter that he rolls in...only difference is..that smell isn't new to you....it's home

>So, lets have names, places, phone numbers, dates and times that you called these places to check up on me. I don't want EMails or web sites, those can be faked, I want names and phone numbers so that I can call them. If you can't then by your standards you are a liar. Kevin, WB5RUE<

Following the thread the last few days, I'm not at all cocerned with the general consensus, but you should be. Nevertheless, I even accept personal checks, but there will be ten day hold on all out of state checks and a 25.00 NSF fee.

>General consensus? Get Real Twistyboy! The only "general consensus" has been people who think you are deranged. Only Modeaholic (who I think is you) has come to your side. <

>>The whole issue is laughable. Assuming that he is being truthful, and he made some calls and inquiries, that did cost some money (And why someone would go to that length over a newsgroup debate is scary enough), the money is already spent, all we want are the names and places so that we can spend some of our money doing the alleged same thing. There needs to be no further expendatures on Twisty't part. Just

name the names and numbers. <

Of course, that is what was asked of Kevin, and quite graciously, I may add.
There was really no further explanation needed from him, but a mere clarification.

>Of course we already suspect that this is all a smoke screen in another sequel in the continuing adventures of Walter Mitty, AKA Twistedhed.
Dave
"Sandbagger"<

Gee Dave, once you claim you do something, you should really do it. If you say you don't concern yourself with me, then stick to it and stop your lying. Also, that little Walter Mitty line was taken from one of your favorites....one man gang (check the archives). Plagiary and lies mutually present themself with the likes of you Hall, no wonder the AKC memebers are all over me...one of their own was shot down.

Hello Dennis:

Thanks for the kind words.

I get a kick out of the old Penetrator 500 E-Bay actions, they can get wild at times. Especially at the last few minutes of the auction. It would be neat to know just how many of the P500 Antennas Hy-Gain did make, I have tried several sources for information inside Hy-Gain but its possibly that some have passed away, or are involved in others things.

The Interceptor 10K is moving right along, with a State Radio Services interested in the VHF Low Band, and High VHF band versions. And now testing Prototypes, as portable Base station antenas, and even have one at a mountain top in the Sierras.

I have one myself tuned for 27.5 MHz, so that I can keep an ear on both CB and 10 metres, while 12 metres has some SWR, I can hear all the Hoo Raw. I even have a I-10K cut for 6 meters, 50.1 and there abouts seems active, (thats a wild band when its humming) and now a 2 meter I-10K is up and running with some design and tuning attenation to being slighty broad banded as to include the new Murs frequencies, it that ever takes off.

Thanks again.

Well don't talk about it be about it. Of course it is just you guiys
posturing there isn't a thing wrong with using the AKC name,
no one is saying we are the American Kennel Club. You guys had better
consult a lawyer before you start offering legal advice.

> detector stage in a radio? Nope.

---Efficiency is not so much the keyword here as unintentional. Anyone using
a tower or supplying tower space to a few systems realizes the problems of
loose/corroded metals. The materials start out the same but oxidation
provides a new mix all on it's own. Go out and tap on a tower leg or guy
wire and see what it looks like on a spectrum analyzer or even a scope. Your
inefficient diodes do a pretty fair job of mixing and providing ample rf
energy to bother other systems in the neighborhood. This interference can
easily occur into the 800mhz bands.

> rolloff well below HF, you aren't going to get much RF from a twisted
> pair even if the termination is open or shorted.
---When it comes to RFI you cannot assume a functional circuit. In fact it's
usually through a circuit fault that the interference slips in.
---Your numbers hold true for the values between each wire in the bundle
however, the interference is common mode referenced to ground. Each wire in
the bundle has virtually the same amount of rf on it with long connection
lengths to ground. Bypassing on the spans or drops is useless. These wire
lengths provide enough rf to the poor connections at the pole boxes or
service entrance panels to demod an AM signal well.
==========
> You cannot "easily assume" a corroded or loose connection, but when
> trying to troubleshoot an RFI problem it's a good idea to start with a
> good circuit.
---I can easily assume a bad connection. This has been my experience with
most phone interference complaints. I've called the phone co. out many times
and the result was loose/corroded connections either at the pole box or at
the service entrance panel.
==========
> >---The interference is not amplified by the CO before it gets to the
house.

> >---The interference is generated locally on the line.

> Telephone service usually has talkback, which means there is an
> amplifier somewhere along the line.
---Sure there's amps on the line. These amps are very well bypassed for rf. The audio has to be on the line before the amp. How does it get there? A diode on the line somewhere near the offending transmitter is the real culprit. A case in point. When I picked up my POTS phone I could easily hear myself. A call had not been established. Cleaning and tightening the connections for my drop cleared it. The same was true for all the complaints I received from the neighborhood.
==========
> >---Most homes have miles of old unused phone lines still connected to the
> >entrance panel.
>
> What state do you live in? Around here old and loose wiring is
> considered a fire hazard. You might find some old houses even with the
> old LV lines, and even a few with the very old cotton wires and
> ceramic standoffs, but most of the houses have already been cleaned up
> during home upgrades.
---My experiences with rfi were in Florida. I don't recall anyone speaking about old and loose power wiring
---In the older, more established, neighborhoods it's not uncommon for the phone company to uncover unterminated lines that were spliced into other lines throughout a house. These lines may not be attached to a jack but simply hidden under a rug or inside a wall. These unrecorded lines act as great antennas and no one really knows they are there beause they were spliced in an attic or behind a wall and not brought all the way from the service panel.
==========

> fact, I know for a fact that you almost have to key right into an
> input to blow a protection diode, and nothing short of a lightning
> strike is going to nuke a bipolar input.
---A stretch you say? Perhaps you misinterpreted what I said. I'm not
talking about destroying the device. Just about having enough rf present at
the inputs to move the dc operating points of whatever semiconductor devices
are close to that input.
---A random wire doesnt need to be resonant to have many volts of rf on it.
---Define protection pair. I'll assume you mean the MOV's generally located
on the inputs of most electronic phones. These devices arent even in the
picture when it comes to rfi. The rf passes right by the devices because the
levels aren't usually high enough to trip them.
---The rf gets into the inputs and couples to the pcb ground. Once there, it
can raise the ground potential so that biasing is affected. The rf can also
be radiated into, or picked up by, the semiconductor devices due to long
lead lengths and traces. Again, there is usually sufficient wire lengths
involved both inside and definitely outside the phone to present large
amounts of rf to the unit.
==========

> If the RF for the sheilded transistors comes from induction in the
> leads, then doesn't that lead to rectification, amplification, and
> eventually RFI? I think you are a very misinformed, my friend.
---Rectification and amplification through induction has been my point throughout this conversation. You just dont see the bigger picture of where the induction and subsequent rectification can take place.
---Even a "cheap" amplifier can stand a chance of working normally in an rf environment provided your lead dress and routing are fairly good and you don't have diodes in the lines when dealing with phone amps.
---Naturally I won't say that it's not possible or unlikely to interfere with a "cheap" or otherwise unshielded amp but there are things that can easily be done to prevent a lot of it.
---Just a simple example: A home stereo with long speaker leads. It's usually the spkr leads acting as antennas to bring the rf into the amplifier or preamps. Bypassing the leads to the chassis with a few caps reduces/eliminates the difference of potential between the leads and the chassis thus eliminating most if not all the interference. The same can work with a cheap phone if the problem is not a bad connection on the line itself. They used to put a cap across the spkr and mic in the old pots phones to prevent rfi. Similarly, it's not uncommon to find a cap across a mic element in todays radios to stop such rfi.

1. You can't sleaze your way out of it. It's the law.

2. eBay has an FCC liason assigned to it to look at the auctions.
Don't think they're not smart enough to look in the ham radio
category.

3. They know the difference betwenn a ham radio and a phney cb export.
Just saying a radio is something other than what it is won't work.

FCC ISSUES REMINDER ABOUT HF TRANSCEIVERS
ï¿½
The FCC has issued a friendly reminder about those HF transceivers
ostensibly marketed for "amateur" use, but actually designed and
intended specifically for the so-called "freeband" radio operators,
who operate primarily in the 26 to 28 MHz frequency range.
ï¿½
In a May 13 Public Notice, the FCC points out that it's a violation of
FCC regulations to import or market a transmitter designed or intended
to operate outside the amateur bands unless the equipment has been
issued a grant of equipment authorization for the radio services it's
capable of operating. The FCC says it wanted to clarify its rules on
equipment that's "intended to operate in various radio services in the
high frequency radio spectrum, including '10-meter' Amateur Radio
Service (ARS) equipment." The notice--directed to "manufacturers,
importers, vendors and users of these transceivers"--emphasizes that
transmitters intended for use by FCC-authorized radio services except
the Amateur Radio Service must be type-accepted.
ï¿½
In the words of the Public Notice: "The Commission considers that the
transceivers discussed above are intended to be operated on
frequencies where the use of type-accepted equipment is required,
because of the simplicity of modifying them to extend their operating
frequency range."
ï¿½
The FCC also noted that it's illegal to import, market or operate a
transmitter that requires a grant of equipment authorization but for
which no grant has been issued, and that it's a violation to transmit
on frequencies allocated to a licensed radio service "without the
appropriate Commission-issued station license." Violators could be

subject to fines or imprisonment as well as equipment seizure and forfeiture.--FCC

continuing adventures of Walter Mitty, AKA Twistedhed.
Dave
"Sandbagger"

>Continuing is right. <

Only because you have never got over being driven underground.

>Of note is the fact that Twistedhed is the only regular in rec.radio.cb ever asked to LEAVE <

Back to that, are we? You girls made your bed, deal with it. Begging me to leave is on par with the Nad man threatening to spam the group if I didn't leave. If I were you girls, I would want me gone too. I'm simply too much for any of your limited intellects to deal with at one time...gaining slightly more than a double digit IQ would be a great start for you.
Muenzler was caught in several lies and your panties all become stained collectively.

>"for the good of the group" because of the sheer volume of flames he ignites.<

I have left, several times, most recently as of last Christmas. Before that it was last summer. I told you I take several trips per year..work on that retainment.
Nevertheless, when I was absent, you escalated your ill mannerisms and behavior, you couldn't even take a break from your harassment on Christmas.
But let's reflect for a moment, on what is really unsettling to your fragile ego. You are upset, as is the rest of the peanut gallery, because your bullshit intimidation tactics are rendered impotent, much like the rest of your, uh, attributes. Another poor assed example, lying POS, hypocritical, shit talking hammie was outted. All the enjoyment you derive from the abuse and harassment you dish out doesn't come close to the satisfaction gained from watching you bottom feeders squirm.

> (He refused) <

Of course I refused. I'm now a member of 3 worldwide DX groups and have met some super cool folk because of this room. I have been to 3 kick ass keydowns and 1 annual birthday bash because of this room. I have learned some things about constructing my own antennas and some things about non-related subjects.
Pissing in your eye isn't personal, it's a bonus. I know it seems that way to you, but it is only because of the sheer amount of BS you try

but fail with.

-A-

We would expect no less, after all, you and Hall didn't come until your collars were yanked.
Attacking me doesn't take away from the fact that Muenzler was shown he not only deliberately lied several times over, but cant recall what he said.
Your childish rants and attacks doesn't take away from your newest member..Wb5RUE telling deliberate lies and insults...but then again, this is why you ran so quickly to defend him, isn' t it?
He was merely being shown something simple that he claimed he never said. To illustrate, I merely showed him a few MORE examples of things he said, but denied saying, beginning with his claim of not hurling insults, to his claim that he never called himself an FCC observer, which were also proven to be lies, by quoting his own text..
It was upon these examples Dave Hall began to bleed from betweeen his legs, and you begin foaming at the mouth, staring intently at his rear, all the while thinking of me.

>==========

Now I'll agree 100% with that: it is ABSOLUTELY NECESSARY to clean
your contacts for a transmitter, and corrosion WILL cause distortion
and/or harmonics. But as for unintentional rectification of a
-received- signal due to corrosion, it just doesn't happen very often,
if at all. I have never seen a case of this happening. The cause is
usually something else, like corrosion of the connection on the ground
rod causing a poor ground, but that's not unintentional rectification.

<snip>
>> A loose connection will make noise all by itself due to intermittent

>> pair even if the termination is open or shorted.
>---When it comes to RFI you cannot assume a functional circuit. In fact it's
>usually through a circuit fault that the interference slips in.

One of the first steps in debugging RFI is to establish that the
device would be otherwise functional. If it is not, then the device is
suspect. I think we agree on that point.

>---Your numbers hold true for the values between each wire in the bundle
>however, the interference is common mode referenced to ground. Each wire in
>the bundle has virtually the same amount of rf on it with long connection
>lengths to ground. Bypassing on the spans or drops is useless. These wire
>lengths provide enough rf to the poor connections at the pole boxes or
>service entrance panels to demod an AM signal well.
>==========

The bundles are either shielded or bundled into a weave to prevent
common-mode RF currents. It works pretty well until you get down to
just a couple pairs. Any common-mode currents after that have little
effect because the termination for each pair is balanced.

>> You cannot "easily assume" a corroded or loose connection, but when

>> good circuit.
>---I can easily assume a bad connection. This has been my experience with
>most phone interference complaints. I've called the phone co. out many times
>and the result was loose/corroded connections either at the pole box or at
>the service entrance panel.
>====================================

Perhaps I should have said that differently: There is a difference in
the types of interference, such as telephone crosstalk, hash noise,
and RFI. For most common interference complaints there is a good
"probablility" that the problem is a loose/corroded connection. But
when the problem is RFI, nothing can be "assumed".

>> >---The interference is not amplified by the CO before it gets to the

>myself. A call had not been established. Cleaning and tightening the
>connections for my drop cleared it. The same was true for all the complaints
>I received from the neighborhood.
>====================================

That was my point, except that the recification is usually in the mic
or earpiece, not corrosion on the lines. One way to tell is if one
phone picks up RFI but another phone on the same line does not. The
rectification is coming from the phone, not the line. The RF may be
coming from the line, but not the rectification. Now if every line in
a small neighborhood is picking up the same RFI, then you KNOW it
isn't the phone or the line (in cities like mine, pairs are usually
not grouped so closely).

>> >---Most homes have miles of old unused phone lines still connected to the

>---My experiences with rfi were in Florida. I don't recall anyone speaking

>about old and loose power wiring

Nothing in Florida suprises me. But loose wiring is still a hazard
whether it's telephone wires or power lines. Many states have laws
requiring the removal of old, unused house wiring of any kind.

>---In the older, more established, neighborhoods it's not uncommon for the

>lines throughout a house. These lines may not be attached to a jack but
>simply hidden under a rug or inside a wall. These unrecorded lines act as
>great antennas and no one really knows they are there beause they were
>spliced in an attic or behind a wall and not brought all the way from the
>service panel.
>==================================

I have never seen that to be the case when, as you said before, the
wires were not paired. As long as they are paired (and capped for
safety), the most you will get is a little common-mode RF which, as I
said earlier, doesn't do diddly because the terminations are balanced.

<snip>
>> >---The phones in use today are not well shielded and being mostly solid

>---A stretch you say? Perhaps you misinterpreted what I said. I'm not
>talking about destroying the device. Just about having enough rf present at
>the inputs to move the dc operating points of whatever semiconductor devices
>are close to that input.

I must still be missing your point: how does RF induced in a wire move
the DC operating point of a solid-state device? First, you are
assuming that the device is not DC isolated with a cap. Then you need
some sort of rectification -outside- of the device to get your DC from
the RF. Then you need to get that DC to blow the protection circuitry
(usually back-to-back diodes, providing a protection zone of + or -
1.4V; and that's DC, AC -and- RF). But it takes a significant amount
of power to blow those puppies:

Any wire acts like an antenna. You have points of high impedance (high
voltage and low current) and points of low impedance (low voltage and
high current). If the input to the protected device is high impedance,
the diodes are going to shunt that voltage right to ground. And they
will do it even if the voltage exceeds the rating of the diode, simply

because the diodes provide a low-impedance load to a high-impedance signal. Now if that voltage were accompanied by a significant amount of current, you bet it would blow those diodes. But the current is at the low-impedance points of the antenna, where the voltage is low. If the input is at the low-impedance point of the antenna, the diodes will shunt the current to ground, but it takes a mighty strong signal to induce enough current to reach Imax.

But if you blow the protection diodes, then the circuit is no longer protected and is probably destroyed as well.

So I don't see what you are trying to say here.

>---A random wire doesnt need to be resonant to have many volts of rf on it.

No it doesn't. But you need current, too. If you have lots of volts on the end of a wire, you probably have a wire that isn't connected to anything, or is half-wave resonant. Either way, connecting that wire to a load is going to drop those volts very quickly because in both cases there is going to be very little current.

>---Define protection pair. I'll assume you mean the MOV's generally located
>on the inputs of most electronic phones. These devices arent even in the
>picture when it comes to rfi. The rf passes right by the devices because the
>levels aren't usually high enough to trip them.

MOVs are meant for spike protection, and are for personal safety as well as circuit protection. No, they don't do squat for RF. But if there are any electronics that could get damaged from stray signals on the line, it will usually have a pair of diodes and a DC isolation cap. That's standard engineering practice in electronics.

>---The rf gets into the inputs and couples to the pcb ground. Once there, it
>can raise the ground potential so that biasing is affected.

Nope. I'm sorry, you are going to have to provide a real example of that one, because I'm not buying it.

> The rf can also
>be radiated into, or picked up by, the semiconductor devices due to long
>lead lengths and traces. Again, there is usually sufficient wire lengths
>involved both inside and definitely outside the phone to present large
>amounts of rf to the unit.

I don't think so. Not even close. Tell ya what: take your multimeter probes and put them across any old diode you happen to have handy, put the scale on the lowest voltage setting, put the meter ten feet away from your CB antenna and key up. Then do the same for the lowest current scale. Post the results.

>---Rectification and amplification through induction has been my point
>throughout this conversation.

The point of this thread was Kenneth whining about people who complain
about interference from illegal operators.

> You just dont see the bigger picture of where
>the induction and subsequent rectification can take place.

Actually I do, I have been seeing the big picture for years. It's part
of my job.

>---Even a "cheap" amplifier can stand a chance of working normally in an rf
>environment provided your lead dress and routing are fairly good and you
>don't have diodes in the lines when dealing with phone amps.

I agree. Use twisted pairs for balanced audio signals, run unbalanced
lines close to the chassis, etc. Diodes can be ok depending on what
those diodes are used for.

>---Naturally I won't say that it's not possible or unlikely to interfere
>with a "cheap" or otherwise unshielded amp but there are things that can
>easily be done to prevent a lot of it.
>---Just a simple example: A home stereo with long speaker leads. It's

>or preamps. Bypassing the leads to the chassis with a few caps
>reduces/eliminates the difference of potential between the leads and the
>chassis thus eliminating most if not all the interference.

Beads are much easier and work much better for a low-impedance line.
Most caps don't have good RF characteristics, and also can short (but
that's rare). You can find lots of suitable beads by tearing apart old
computer power supplies and monitors.

> The same can work
>with a cheap phone if the problem is not a bad connection on the line
>itself. They used to put a cap across the spkr and mic in the old pots
>phones to prevent rfi.

That's what I suggested earlier, but with beads.

> Similarly, it's not uncommon to find a cap across a
>mic element in todays radios to stop such rfi.

I have even seen them used in old phones.

Depends on what you want it for. If it's for CB, I think even Radio
Shaft still sells 102" stainless steel whips, and most of their other
loaded antennas are also SS. Try the Yellow Pages or search the net,
I'm sure you will find a source in your area very easily.

Excellent point.
Also when a cb'er gets caught its contact me at..... then the cb'er ditches his big radio...to another trucker ofcourse.
When a Ham is on the cb freq it's only to cause mayham jsut like the hambos cause trouble in OUR newsgroup. Funny thing is you don't see cb'ers harrassing the ham newsgroup.

Some have stated that both Hams and cb'ers should get busted and that breaking the law is breaking the law. There is a big diference and that liscense means you will be treated ALLOT diferently then an unlicensed cb'er.
As a truck driver with a commercial liscense i have the right to legaly operate stuff other drivers cannot. If I violate a traffic law my fine is often 2 to 3 times what a regular driver would would pay. Also some laws that would result in a normal driver losing money would cost me my livelyhood. If i get a ticket while shopping in my car I have to put on a job aplication and believe me it's a black mark.
That's reality.
If a cb'er operates on the "high side" or "low side" and gets caught he will be warned not to and maybe lose his radio. On ch 6 and 11 you can hear people using multi-kilowatt liniers with impunity. If a ham operates in an iligal maner it's a whole new ballgame.
As for local enforcement most "full grown bears" monitor ch19. It's not rocket science that when he hears there is a broke down whatever that is blocking a lane 20 miles away some trucker is using a kicker. Heck no one installs a big 70 dollar antenna on a truck for a 4 watt 30 dollar maxon radio.
If you are a Ham the rulzs and HOW they are enforced are different. Thats reality. Deal with it.
Also grow up. If half of you put as much effort to upgrading your no-code liscense you might start to enjoy your hobby and maybe spend time in your own newsgroup. Your like ugly collage age guys hanging out at a jr high school dance hoping you can impress kids cause your unimpressive to your peers.
I feel sorry for you.

Congratulations, you are the 3,629th person to make that original
contribution in 2002.

Hey man, if you had a clue how bad a 6A8 was for cross-mod, overload, etc.
you would have to really admire the Chinese for building a receiver that
is worse; it takes consumate skill to be that incompetant. Takes even
more skill to be sold one.

You sound like a proud owner. I got this creampuff used car......

981. Help me identify this Washington Mod Please! (and a couple other problems).

Newsgroup: rec.radio.cb
Date: 2002-07-13 03:56:47 UTC
From: Me <db7500@pacbell.net.nospam>
Message-ID: <B954F30C.12A2%db7500@pacbell.net.nospam>
Source record: 130011

Well, I'm trying to fix a President Washington with the 8719 PLL that won't transmit, and while digging around the chassis, I came across this modification that I couldn't identify.

The mod has been done to IC2, the VCO-MIXER (UH1C007). There appears to have been added a D6515 black glass diode to pins 2-3-4 (ground), a 100KOhm resistor to pin 5 (+3.2V), and a small brown 15pf disc capacitor to pin 6 (+5V). All three of these components have their legs twisted together and are soldered in kind of a 'pyramid' fashion (each connected to one another and then each separate leg connected to the pins I mentioned) to the bottom of the board. I should also mention that the diode is connected with the anode (mark) connected to the capacitor and resistor.
This radio also appears to have been 'unlocked' and 'extended', and previously had a Digalog CRC-100 Frequency Counter hard-wired through the back of the radio.

I just thought it odd that a diode to ground and the other components had been added in this area. I've done a search around the internet, and no mods that I'd found included adding these components.

I put the frequency counter in the newer (though same era) Washington radio I have, and though it reads the correct frequency on AM, the sideband readings are off-frequency (It's the same type Washington with the 8719).

For example, if I'm on 38 AM, the counter will read 27.3850, but when I switch to LSB, the counter reads 27.3840 when I'm finally tuned into other people's signals. 38 USB also reads 27.3884 when in that mode and 'tuned-in'. If I tune the radio so that the counter reads the correct sideband frequency (.225/.775), I can't hear much of anything on LSB (since it's off by 15Hz), and USB I just hear high chirps (due to it only being off by 9Hz).
I thought that since the Frequency Counter worked fine in the radio I'm currently working on (was dead-on sideband frequency .225/.775) that these parts might help correct the frequency readings on the counter?

The newer radio also has the extra 5.6mH choke added to the banded end of the varactor diode to give it extra slide on the clarifier, so I figure this could also result in the wrong frequency reading, but who knows. Too bad the guy that used to own this broken radio is pushing up daisies, or I'd ask 'him' about it...

Anyway, thanks in advance for any help you guys can give me. I hope to get this old clunker back in working order, but I also want to figure out what's been done to it (gotta love ebay auctions with a clueless seller... And buyer... ;).
Thanks again.

If you spent $70 on your antenna you got ripped. Now if you were a
"no-code" Ham you would have known how to make one for less than $10 in
parts.

****
****

And if you had the experience you would realize that mounting two
functioning cophased antennas on crappy grounds (mirrors) does not submit
to the usual antenna theory. The idea is to get some radiation off the
upper parts of a shortened antenna. Not impossible but not easy. The
jolly boys building Firesticks, aside from a name that gives me gas, do a
better job of this compromise than I would until I got a real feel for
what I was doing. And helical dummy loads while common at VHF/UHF are a
bit arcane for the beginner. He got out cheap for $70.

And having to use Maxon UHFs at work, his analysis is right on the money.

I heard it was so bad that some of the guys took their money back and went to the beach. hey! an idea, Maybe two or three reputable people like 331 from Jacksonville, NC, Wonder Boy from WDC or ... (very well organized breaks) get together and form a sanction body like NHRA, NASCAR ... set rules and procedures. These people would do all the advertising as well as inspect the field, station, and direction to be faced. Once certified by them this would become a reputable break that competitors would be very comfortable with traveling to, it would also increase the participation. They would oversee the break and receive a fee plus percentage of all of the registration fees (which are a rip-off anyway) The problem with breaks are no one knows what's going on, rules are not enforced, and the station you are shooting to who knows where it is or how far away it is. I stayed home this year but may hit Hammers break in NC in Sept. and two weeks later in DC, there I know the rules will be for everyone and the pay will be correct.

Nor should it be. Congratulations on not making bandwidth a design criterion; efficient radiators are not broad and that's a fact. I would expect your designs to have about a 3% bandwidth between 2:1 SWR points, and that much because you use heavy gauge tubing in the design. You want bandwidth, load a 50 ohm resistor; won't radiate for beans but you'll love that SWR.

There has been an ongoing (like 40 years) debate about which side should be favored when you do not have the bandwidth. In the tube days it was thought cute to cut for the high side and let the pi-section sort it out. When solid state came out, it was recommended to cut long to avoid a capacitive load that tripped the SWR protection. You have any feeling on this?

Something you might want to try is parallel feeding two elements slightly different in length. The idea actually came out of CB when people would feed two whips off the same spring to improve bandwidth. And take a look at a Hy-Tower that manages to be 1/4 at 3800 and 3/4 at 14.2 in 52 feet.

Ain't 'tennas fun??

Beer Keg

998. Re: I-10K <For Jay>

Newsgroup: rec.radio.cb

Source record: 130027

Hello Beer Keg:

Yes I agree with the SWR war, while looking at the near field, field strength the antenna doesn't show any reduced field strength until even higher SWR's, but I wasn't looking for that the last time. I was looking at SWR vs FS within a smaller change of the SWR curve. I didn't see any significant difference!

I will side with the adjusting the antenna slightly lower in frequency, it seems the upper SWR sloop is wider. Its inductive to the left, and capactive to the right, of the SWR curve. This brings up a design jar of worms for a 5/8 wavelength antenna. Later on this. For the capacitive increase in the antenna, I haven't given it any thought, good call. This would certainly push the Pi-network to limits.

I have seen where the broad banding techniques use different lengths for the main radiator, and on scanner antennas a type of U shaped, or V shaped add on shape at a certain length, to increase the broad banding of the elements.

Another Broad band technique is the use a special add on Impedance Matching Accessory that can be installed to a existing antenna and almost double the bandwidth, I have the math in work, but will require some doing in the hardware department, and that will be a real changlede to build and get working. This is a back burner project, in priority.

Yep tennas R fun, except whenn the antenna analyzer is hooked to one antenna, and your adjusting another antenna looking for changes in SWR..... Oh yeah!

Jay in the Mojave ..... 112 degees yesterday, not the time of day to be working on the swap cooler, and out of Beer!!!! Dass right!

>complaints to eBay.
>

Mark,

Here's what eBay had to say about my 2510 auction, listed under
'Ham:Tranceivers':

eBay appreciates the fact that you chose to list your auction:

1354144698 Uniden 10 meter Transceiver

with us. Generally, scanning receivers and radios may be listed on
eBay. However, you may not list any scanning receiver or radio that
receives cellular transmissions or both 10 meter and CB bands (11
meter range). Also, you may not list any scanning receiver or radio
that receives cellular transmissions or has "full 800mz" coverage.
Also, linear amplifiers listed in the CB category will be ended.
Finally, this item has been identified by the FCC as potentially
problematic, and as a matter of policy we are not permitting this item
to be listed at this time.

This decision is based on information provided by the FCC. Members
who desire further information
concerning the listed transceivers or similar models should be
encouraged to contact Ray LaForge, or
Gary Hendrickson at the FCC Laboratory, 7435 Oakland Mills Road,
Columbia, MD 21046,
(301) 362-3041 and 30433 respectively or E-mail: rlaforge@fcc.gov and
ghendric@fcc.gov

eBay prohibits any listings of the following:

* CB amplifiers
* Amplifiers specified for use on the 11 Meter band
* Amplifiers designed for use in frequencies 26.965 MHz to
27.405 MHz
* Amplifiers posted within the CB category
* CB Radios that are amplified to exceed 4 Watts using the AM
Settings or 12 Watts using the SSB settings

For more information regarding the FCC rules regarding CB
Transceivers, please visit:

http://www.rcic.com/reg/fcc/fccpt95.htm#

Therefore, we have ended this auction and all fees have been credited
to your account.

For information on eBay's policies regarding scanners and electronics
Equipment,
please view:
http://pages.ebay.com/help/community/png-scanners.html

For information on infringing, prohibited or questionable items,
please view:
http://pages.ebay.com/help/community/png-items.html

For more information on why eBay has ended an auction, please visit:
http://pages.ebay.com/help/community/png-endauction.html

IMPORTANT NOTICE: Please be aware repeated incidents of this nature
can lead to the suspension of your account. We value you as a member
of our community and wish to continue this relationship, so we must
ask you to refrain from any violations of the Listing Policies or User
Agreement in the future.

We thank you in advance for your cooperation.

Please feel free to contact us with any questions or concerns you may
have on our existing listing policies.

Regards,
Grace . (ended@ebay.com)
eBay Community Watch

Now, if you point your browser to:

http://members.aol.com/akwusmc/radios

you can download the zip file that Mr R.A.Laforge from the FCC sent me
that explains the problems that the FCC has with the HR2510 (and
others).

I would note, however, that since my auction was canceled, a total of
17 President 10 meter units have been listed and gone to auction
conclusion (not all have sold, due to seller reserves not being met).

One could therefore conclude that their enforcement is spotty. I
simply cannot devote the necessary time to track ALL the radios that
the FCC has listed as 'problematic', but I can tell you that there are
banned models being listed and sold every day on eBay.

1014. FCC Prohibited Transceivers

Newsgroup: rec.radio.cb
Date: 2002-07-13 19:27:23 UTC
From: voobner_aaron@yahoo.com
Message-ID: <22a5e694.0207131127.7b2b598d@posting.google.com>
Source record: 130043

Pay special attention to Question numbers 4, 5, 6 and 7.

-A

NON-APPROVED C.B. RADIOS

1. Q. What is a legal C.B. radio?

A. All radio transmitters and receivers which are intended to operate on the 27 MHz Citizen's Band (C.B.) channels must be approved by the F.C.C. before they can be imported, advertised, sold or used. The manufacturer must be issued an F.C.C. grant of equipment authorization, called "certification", as indicated by an FCC ID on each unit. If the radio has a label showing an FCC ID, and the ID can be verified by checking the Equipment Authorization database on the F.C.C./OET Web page, then the radio is legal.

2. Q. What kind of radios are illegal to use on the C.B. radio channels?

A. Any radio transmitter, receiver, or transceiver which is designed by the manufacturer to operate on the C.B. radio channels, but which has not been granted an F.C.C. equipment authorization is illegal. These non-approved radios may appear in several different forms:
1. "10-Meter Amateur" radios, which have been designed so as to be readily alterable to operate on the C.B. radio channels, and/or on other non-amateur frequencies in the frequency range from about 24 to about 32 MHz;
2. "Export" or "full channel" radios, which are designed to operate over all, or a portion of, the radio spectrum from about 24 to about 32 MHz, including the 27 MHz C.B. radio channels; or
3. F.C.C.-approved C.B. radios which are designed so as to be readily alterable to operate on frequencies in the range from about 24 to about 32 MHz, which are not assigned to the 27 MHz C.B. Radio Service.

3. Q. What do you mean by "readily alterable"?

A. This means that the user of the radio can add, or change, its operating frequencies by simply flipping an internal switch, by clipping the leads of, or installing, a simple component such as a diode, resistor or jumper wire, by installing, moving, or removing, a jumper plug, by connecting or disconnecting a connector, by replacing a plug-in semiconductor chip, or by programming a semiconductor chip using special access codes or an external device, such as a personal

computer.

4. Q. What are these other frequencies between 24 and 32 MHz used for?

A. These frequencies are assigned to many different licensed radio services, both in the United States, as well as in other countries. Authorized users include Maritime and Aeronautical radio stations, standard time and frequency stations, international broadcasting stations, amateur radio, and government stations. A portion of this spectrum is also allocated to radioastronomy, where scientists are attempting to listen to very weak radio signals coming from distant stars and galaxies. No radio transmitters of any kind are permitted within these radioastronomy bands, so any earth-bound transmitted signals can completely disrupt radioastronomy observations.

5. Q. I don't hear any other stations on "my" frequency, which is not one of the 40 allocated C.B. radio channels. So what is wrong with operating my radio station here?

A. You may unknowingly cause interference to legitimate communications. Many of these frequencies may appear, to the casual listener, to be unused. Some of the authorized users may be using emission types which can not be plainly detected. Or, their transmissions may be intermittent. You will not hear any legitimate signals within the designated radioastronomy bands. However, just because a frequency sounds clear, that does not mean that it can be used without proper authorization.

6. Q. Why do some people operate illegally on these frequencies?

A. Many of these frequencies may appear to be "free" of any legitimate users, so some people think they are "free for the taking". The illegal radio operators are commonly referred to as "freebanders", and use their radios as a form of hobby, similar to Amateur Radio. But for many reasons, these people choose not to obtain an amateur radio license. They operate on these frequencies because under certain weather and radio propagation conditions, their signals can extend all the way around the world, enabling them to communicate with other similar unlicensed stations.

7. Q. What can happen if the F.C.C. catches me operating on an unauthorized frequency?

A. You are subject to severe penalties, including monetary forfeitures, confiscation of your radio equipment, and possibly even jail time.

8. Q. I've heard that some of the "big name" amateur radio equipment can also be altered to operate on non-amateur frequencies, including the C.B. radio channels. So why are these radios not considered to be "non-approved C.B. equipment"?

A. First, it must be emphasized that use of this type of amateur equipment on unauthorized frequencies, including using it on the C.B. radio channels or other non-amateur frequencies in the 24 to 32 MHz range, is illegal, and doing so will subject the user to the same penalties as mentioned above.
That being said, there are legitimate reasons for some amateur equipment to be used on certain non-amateur frequencies, such as on military M.A.R.S. (Military Affiliate Radio System) and C.A.P. (Civil Air Patrol) frequencies. MARS and CAP radio stations are only authorized to operate on specific assigned (non-amateur) frequencies. With just a few exceptions, most of the assigned MARS and CAP frequencies do not fall within the 24 to 32 MHz frequency range. Although some models of amateur equipment (manufactured by companies such as Alinco, Icom, Kenwood, Ten-Tec, Yaesu, etc.) may be capable of operating on the C.B. radio channels, they do not display the assigned C.B. channel number, nor are they designed to deliberately facilitate operation on the C.B. channels.

1015. FCC Knows That Calling a CB a "10 meter radio" is a scam

Newsgroup: rec.radio.cb
Date: 2002-07-13 19:30:16 UTC
From: voobner_aaron@yahoo.com

Source record: 130044

Federal Communications Commission

Washington, D.C. 20554

May 17, 1999

John F. Atwood
Chief, Intellectual Property Rights
Department of the Treasure
U.S. Customs Service
1300 Pennsylvania Avenue, N.W.
Washington, DC 20229

Dear Mr. Atwood:

I am writing in response to your letter of January 15, 1998. In that letter you requested the the FCC reply to a request by Mr. George L. Lyon, Jr., counsel to WSM Corp, that the Customs Service decided whether certain radio frequency devices could legally be imported in the commerce of the United States. The radio transceivers involved are purportedly amateur transceivers. According o information provided by the FCC field staff, the device at issue is a mirage model 2950 or similar transceiver. Because we conclude that the devices at issue are not only amateur radios but can easily be altered for use as Citizen's Band (CB) devices as well, we have concluded that the devices cannot legally be imported for the reasons discussed below.

Devices used in the Amateur Radio Service do not require authorization prior to being imported into the United States, but devices for other services, including the CB service, require Commission approval. The type of device at issue here is designed to operate in the amateur "10-meter band" and is often referred to as a "10-meter" radio. The amateur 10-meter band uses frequencies that are very close to the channels set aside for use in the CB service. Some devices that manufacturers call "10-meter" radios either operate on the CB frequencies as manufactured and imported or are designed such that they can readily be activated by a user, a service technician or a dealer to operate on CB frequencies. According to Section 95.603(c) of the Commission's rules, a CB transmitter is a transmitter that operates or is intended to operate at a station authorized for the CB service. 47 C.F.R. Section 95.603(c). The Commission's equipment authorization experts in the FCC Laboratory have determined that the Mirage 2950 and other similar models at issue here are intended for use in the CB frequencies as well as in the amateur service because they have built-in capability to operate on CB frequencies and can easily be altered to activate that capability, such as by moving or

removing a jumper plug or cutting a single wire. Thus, they fall within the definition of a CB transmitter. See 47 C.F.R. Section 95.603(c). A CB transmitter must be certificated by the FCC prior to marketing or importation. 47 C.F.R. Sections 95.603(c); 2.803.

Moreover, dual use CB and amateur radios of the kind at issue here may not be type accepted under the Commission's rules. Section 95.655(a) states: "....([CB] Transmitters with frequency capability for the Amateur Radio Services ...will not be certificated.)" See also Amendment of Part 95, Subpart E, Technical Regulations in the Personal Radio Services Rules, FCC 88-256, 1988 WL 488084 (August 17, 1988). This clarification was added to explicitly foreclose the possibility of certification of dual use CB and amateur radios, see id., and thereby deter use be CB operators of frequencies allocated for amateur radio use.

In addition, the Commission's equipment authorization experts have determined that the devices violate or appear to violate a number of the rules governing CB devices. Fir example, they emit RF power at a level in excess of the levels permitted in the CB radio service. See C.F.R. Section 95.639.

In view of the foregoing I request that the Customs Service respond to the request for ruling and advise the requestor that the "10-meter" radio at issue is not acceptable for importation into the United States. In cases where importation was accomplished even though it was not in accordance with FCC and Customs regulations, it is appropriate that the Customs Service order re-delivery of the unacceptable products.

Thank you for the opportunity to assist with this matter.

Sincerely,

(signed)

Christopher J. Wright
General Counsel

cc: Mr. Richard Lee
Mr. Dale Hatfield
Mr. George L. Lyon, Jr.

1016. "Freebanders" key over radio astronomers? Ugh!

PUBLIC NOTICE
FEDERAL COMMUNICATIONS COMMISSION
1919 M STREET NW
WASHINGTON, D.C. 20554
62882
May 13, 1996

Extended Coverage high Frequency Transceivers

The purpose of this Public Notice is to clarify the commission's Rules regarding equipment that is intended to operate in various radio services in the high frequency radio spectrum, including "10-Meter" Amateur Radio Service (ARS) equipment.

The Commission has noted that a number of transceivers imported as ARS equipment are also capable of transmitting and are being operated in nearby frequency bands allocated to other radio services such as the Private Land Mobile Radio Service, Maritime Services, Auxiliary Broadcast Services, International Broadcasting Services, the Citizens Band Radio Service, and the U.S. Government. Operation of this equipment causes interference to the authorized users of these frequencies. Some of these transceivers are capable of using output powers or emission types which are not permitted for the radio services listed above and some are capable of transmitting in the radio astronomy band where no two-way radiocommunication is permitted. Some manufacturers are promoting the sale of conversion kits, or have designed their transceivers such that they can easily be modified by the users, to extend the operating frequency range into the frequency bands listed above. In addition, so called "export" radios which are deliberately designed to facilitate this capability are also being imported and marketed.

Manufacturers, importer, vendors and users of these transceivers are reminded that transmitters intended for operation on frequencies allocated to any of the FCC authorized radio services listed above, except the ARS, must be type accepted by the Commission for the particular radio service(s) in which they are intended to operate prior to their importation, marketing or use. The Commission considers that the transceivers discussed above are intended to be operated on frequencies where the use of type accepted equipment is required, because of the simplicity of modifying them to extend their operating frequency range. Transmitters designed and intended for use only in the ARS must comply with the applicable technical standards contained in part 97 of the Commission's Rules but are not required to be type accepted.

It is a violation of the Commission's regulations to: (1) import or market a transmitter that is designed or intended to operation frequencies outside of the ARS bands, if it has not be issued a grant of equipment authorization for the radio service(s) in which the transmitter is capable of operating; (2) import, market or operate a transmitter that requires a grant of equipment authorization but for which no grant has been issued; or, (3) transmit on a frequency allocated to a licensed radio service without the appropriate Commission-issued station license. Violation of the Commission's regulations will subject manufacturers, importers, vendors and users of this equipment to appropriate criminal penalties as provided for by federal law(s), including fines and/or imprisonment. In addition, the equipment described above can be seized by, and forfeited to, the government.

For further information concerning this Public Notice, contact Gary Hendrickson at the FCC Laboratory, 7435 Oakland Mills Road, Columbia, Md. 21046, (301) 362-3043, or E-mail: ghendric@fcc.gov.

1017. Re: President HR-2510 on ILLEGAL LIST

Newsgroup: rec.radio.cb

Cross-posted to: rec.radio.cb,rec.radio.swap,rec.radio.amateur.swap

ILLEGAL CB TRANSCEIVER LIST

The FCC's Office of Engineer and Technology (OET) has evaluated the devices listed below and has concluded that these devices are not only amateur transceivers but can easily be altered for use as Citizens Band (CB) transceivers as well. As such, OET has further concluded that these devices cannot legally be imported or marketed within the United States for the reasons discussed below. Further, the FCC General Council has issued a decision in a specific case involving one manufacturer and has concluded that dual use CB and amateur radios of the kind at issue may not be approved under the Commission's rules and are in violation of several rules including the RF power level limits of 47 CFR 95.639. (letter from Christopher J. Wright, FCC-OGC to John F. Atwood, US Customs Service, dated May 17, 1999).

Transceivers used in the Amateur Radio Service below 30 MHz do not require FCC authorization prior to being imported into or marketed within the United States, but transceivers for other services, including the CB Radio Service (CB), do require Commission approval. The transceivers listed herein and other similar models operate in the amateur "10-meter band" and are often referred to as "10-meter" radios or "export" radios. The amateur 10-meter band uses frequencies that are very close to the channels set aside for use in the CB service. Some of the transceivers that manufacturers call "10-meter" radios either operate on CB frequencies as manufactured and imported or are designed such that internal circuits can readily be activated by a user, a service technician or a dealer to operate on CB frequencies. According to Section 95.603(c) of the Commission's rules, a CB transmitter is a transmitter that operates or is intended to operate at a station authorized for the CB service. 47C.F.R. ï¿½ 95.603(c). The Commission's equipment authorization experts in the FCC Laboratory have determined that the transceivers listed herein and other similar models at issue here are intended for use on the CB frequencies as well as those in the amateur service because they have built-in capability to operate on CB frequencies. This capability can be readily activated by moving or removing a jumper plug, cutting or splicing a wire, plugging in a connector, or other simple means. Thus, all the transceivers listed herein and similar models fall within the definition of a CB transmitter. See 47C.F.R. ï¿½ 95.603(c). A CB transmitter must be certificated by the FCC prior to marketing or importation. 47 C.F.R. ï¿½ï¿½ 95.603(c); 2.803.

Moreover, the dual use CB and amateur radios of the kind at issue here may not be certified under the Commission's rules. Section 95.655(a)

states: "ï¿½.([CB] Transmitters with frequency capability for the Amateur Radio Services ï¿½ will not be certificated.)" See also Amendment of Part 95, Subpart E, Technical Regulations in the Personal Radio Services Rules, FCC 88-256, 1888 WL 488084 (August 17, 1988). This clarification was added to explicitly foreclose the possibility of certification of dual use CB and amateur radios, see id, and thereby deter use by CB operators of frequencies allocated for amateur radio use.

In addition, the Commission's equipment authorization experts have determined that these devices violate or appear to violate a number of the rules governing CB devices. For example, they may use emission types not permitted, or emit RF power at a level in excess of the levels permitted in the CB radio service. See 47 C.F.R. ï¿½ 95.639.

In view of the foregoing, the following "10-meter" transceivers are not acceptable for importation or marketing into/within the United States. Importation and marketing of these units is illegal pursuant to Section 302(b) of the Communications Act and Section 2.803 of the rules. Willful violations of the Rules and the Act may subject the violator to a monetary forfeiture of not more than $11,000 for each violation or each day of a continuing violation. The Commission continues to review this type of equipment, and additional makes and models may be added to this list in the future.

LIST OF TRANSCEIVERS
ILLEGAL TO IMPORT OR MARKET

GALAXY - models: DX33HML, DX 44V, DX55V, DX66V, DX 73V, DX 77HML, DX 88HL, DX99V and Saturn Turbo

CONNEX - models: 3300, 3300HP-ZX, 3300 PLUS and CX-3800

MIRAGE - models: 44, Galaxy 88, 9900 and 2950EX

NORTH STAR - models: NS-3000 and NS-9000

PRESIDENT - models: Grant, J.F.K., Jackson and Lincoln

PRO STAR - model: 240

RANGER - models: AR-3500 and RCI-2950

TEK - model: HR-3950

UNIDEN - models: HR-2510 and HR-2600

SUPER STAR - model: 121

For further information concerning the listed transceivers or similar models, contact Ray LaForge or Gary Hendrickson at the FCC Laboratory, 7435 Oakland Mills Road, Columbia, MD 21046, (301) 362-3041 or (301) 362-3043 respectively, or E-mail: rlaforge@fcc.gov and ghendric@fcc.gov

Gentlemen,

Is it any wonder that illegal CBers are cheating on "keydown" rules?
LOL, what do you expect? You are ILLEGAL and you break FCC rules
already. Also, stop living in a dream world, you cannot form a
legitimate organization like NHRA and NASCAR - because what you do is
AGAINST THE LAW.

You guys might wanna check out our new "KEYCLOWNS SUCK" Tank Top, only
$12.99 at the AKC Store.

> to the usual antenna theory.

You may not have realized mirror mounts are "crappy grounds", but I do. It all goes back the basic idea of "images" of the various antenna elements in the ground. You ever do any antenna modeling using Roy's EZNEC program? One more thing, Kenneth never mention anything about cophased antennas. Not every truck on the road uses that kind of antenna arrangement, just look around.

http://www.eznec.com/index.shtml

I have for verticals, turnstiles, horizontal loops, and helical antennas for satellite comm.'s. And guess what? One doesn't even have to have a Ham license to use the software either. Just a simple desire to understand basic antennas, a bit of time to learn to use the software, and a few bucks for materials for experiments.

Whatever, here's one more verse.

(waltz time mit oompah und kraut)

We re coming, we re coming our brave little band
On the right side of temp rance we do take our stand
We don t use tobacco because we do think
That people who use it are likely to drink

(Chorus)
Away, Away with Rum, by gum
Rum by gum, rum by gum
Away, Away with Rum by gum
It s the song of the Temperance Union.

We never drink water they put it in gin
And one little sip and a man starts to grin
O, can you imagine a sorrier sight
Than a man drinking water and singing all nite

Chorus

We never eat corn flakes because they have malt
And we cannot imagine a much greater fault
O, can you imagine a sight that s more droll

Than a woman at breakfast slumped over her bowl

Chorus

We never drink milkshakes ?cause they?re made with malt
And one little slurp makes your brain somersault
Oh can you imagine behavior so rash
As bar top gymnastics with a frothy mustache

Chorus

Chorus

Hey Dick! I found the ORIGINAL lyrics! It's called.....

"THE ILLEGAL KEYCLOWN SONG"

(Sung to the tune of the "Hoedown" on TV's "WHOS LINE IS IT ANYWAY?")

(Oompah oompah oompah oompah)

We're illegal keyclowns, you know our brand
We invaded the CB and 10 meter band
We splatter all channels, we don't give a f*ck
If people want to use CB they're just sh*t out of luck

(Chorus)
Break, Break the laws, by god
Laws by god, laws by god
Break, Break the laws, by god
It's the song of illegal keyclowns.

(Oompah oompah oompah oompah)

Give us but one inch, and we'll take a mile
We're liars and sleazebags, and that's just our style
Oh, can you imagine a sorrier state
For CB to be in? Well hang on, you just wait!

(Chorus)
Ignore, Ignore the laws, by god
Laws by god, laws by god
Ignore, Ignore the laws, by god
It's the song of illegal keyclowns.

(Oompah oompah oompah oompah)

We drive off the people who're honest and true
Because they shed light on the bad things we do
On CB there's nothing we hate more to see
Than someone who's using their radio legally

(Chorus)
Away, Away with laws, by god
Laws by god, laws by god
Away, Away with laws, by god
It's the song of illegal keyclowns.

(Oompah oompah oompah oompah)

We like competition to see who's more loud
Distortion and harmonics just make us feel proud
We don't give a hoot, our behavior is rash
We've transformed a chunk of spectrum into a pile of trash
(ending)
In...to...a...pile...of...traaaaash!

Oddly enough, I agree with much of what Aaron posts. If only he didn't post it ad nauseum and interjected a little common sense here and there. Reciting the hardline stance of the party does get to be tiresome after awhile...and is responsible for his troll rep.

Which is why they remind me of Prohibitionists. And you get two more
verses.

(waltz time mit oompah und kraut)

We re coming, we re coming our brave little band
On the right side of temp rance we do take our stand
We don t use tobacco because we do think
That people who use it are likely to drink

(Chorus)
Away, Away with Rum, by gum
Rum by gum, rum by gum
Away, Away with Rum by gum
It s the song of the Temperance Union.

We never drink water they put it in gin
And one little sip and a man starts to grin
O, can you imagine a sorrier sight
Than a man drinking water and singing all nite

Chorus

We never eat corn flakes because they have malt
And we cannot imagine a much greater fault
O, can you imagine a sight that s more droll
Than a woman at breakfast slumped over her bowl

Chorus

We never drink milkshakes cause they re made with malt
And one little slurp makes your brain somersault
Oh can you imagine behavior so rash

As bar top gymnastics with a frothy mustache

Chorus

We never eat fruitcake because it has rum
And one tiny bite turns a man to a bum
Oh can you imagine the pitiful plight
Of a man eating fruitcake until he gets tight

Chorus

A man who eats fruitcake lives a terrible life
He's mean to his children and beats on his wife
A man who eats fruitcake dies a terrible death
With the odor of raisins and rum on his breath

Chorus

Source record: 130077

Heya Doc,
Well, what's happening on transmit, is everything works okay, but it only puts out about 1/2 watt (even with VR6 backed all the way off). Switching to sideband doesn't change anything. It almost appears if it had the linear mod conversion done to it, but I don't see any changes in the circuitry that would show the linear modification had been done.
I suspect that it may just be the final transistor, but I'm not positive.
Anyway, thank you for the offer, and I have bookmarked your website.
Once I get the cash I just might hit you up for some service.
Thanks again.

Hi All

I am reposting this request because some of you said you maybe able to help me but didn't have the time last week to look.

I have owned many radios over the past 30 years and have found pictures of all of them on the net except 1. I can't remember the Radio Shack model number but I would know it to see it. It was a 40 Ch SSB mobile with an all black face. It was all push button, (no rotary CH selector). It had 40 Ch scan and channel change on the microphone. It only ran for about 1 year in 1980 or 1981. It had many problems and was not a good radio. Every time you turned it off it went back to Ch-1 and had a bad frequency drift so I only had it for about 2 months and traded it in for an other model. If any of you can remember the radio and come up with a model number it would be appreciate. I check this NG regularly so if you could just post it here. Thanks

1055. CFB vs Ham

Newsgroup: rec.radio.cb
Date: 2002-07-14 07:07:57 UTC
From: WG <nojunk@mail.com>
Message-ID: <hr9Y8.15833$kt5.428440@news1.telusplanet.net>
Source record: 130084

I am wondering what all the fuss is about? When you are on the CB band you are a CBer regardless of if you have a ham license or not. If you are on the ham bands and have the license you are a ham. If you are in the free band you are nether a CBer nor a Ham but a free bander. If you are in the commercial band and have the correct license you are a commercial radio operator even if you have a ham license or a CB radio. If a Ham is operating out of band let us say 27.195 MHz then he would be a CBer not a ham. If a CBer is operating at 28.055 MHz without a proper license then he would be an unlicensed ham not a CBer in the ham band. If we could all look at it this way it may stop all the fighting on this NG but I don't think that will happen.

If you spent $70 on your antenna you got ripped. Now if you were a "no-code" Ham you would have known how to make one for less than $10 in parts.

Actually I bought a radio shack 10m antenna. But you see the 70 dollar antennas cause there shiny and huge. Among truckers gaudy equals class:)

Some of the CBers on this group sure act like "jr high school" kids.

Yea but we act like kids in OUR own newsgroup. Being purile is never as annoying as crossposting. This is not rec.radio.HamspreachtoCB.
> I feel sorry for you.

You should feel sorry for them. The rest of use can take care of ourselves very well thank you.

Ditto:)
Sincerely
Ken

Nope I have a radio shack 10m/11m antenna. But Ive seen the 70 dollar ones
and when a guy spends several hundred on "checken lights" whats 70 bucks fo
a big shiny antenna.
2nd radio was a Maxon compact from Wal-Mart.
It was junk.

Actually I learned some from here like the 18 foot coax myth is just that.
SWR is more importent then how much the crome shines. Get GOOD coax.
On a fibergalss body truck everything stinks as a ground but the worse is
that truck electrical systems have lousy electical systems. Cophase is too
much of a pain I figure one good antenna is better then 2 5 dollar
frieghtliner antennas but the best is a 102 inch whip. Then my radioshack
goes back into its magnet mount and on my car.
Thanks for the info:)

You may not have realized mirror mounts are "crappy grounds", but I do. It
all goes back the basic idea of "images" of the various antenna elements in
the ground. You ever do any antenna modeling using Roy's EZNEC program? One
more thing, Kenneth never mention anything about cophased antennas. Not
every truck on the road uses that kind of antenna arrangement, just look
around.

http://www.eznec.com/index.shtml

I have for verticals, turnstiles, horizontal loops, and helical antennas for
satellite comm.'s. And guess what? One doesn't even have to have a Ham

license to use the software either. Just a simple desire to understand basic antennas, a bit of time to learn to use the software, and a few bucks for materials for experiments.

Wrong: you would be an illegal operator.

> If you are in the
>commercial band and have the correct license you are a commercial radio
>operator even if you have a ham license or a CB radio. If a Ham is operating
>out of band let us say 27.195 MHz then he would be a CBer not a ham.

True, except for the hams that operate on the Citizen's Band with
their ham equipment. Then they are illegal operators.

> If a
>CBer is operating at 28.055 MHz without a proper license then he would be an
>unlicensed ham not a CBer in the ham band.

He would be neither. He would be an illegal operator.

> If we could all look at it this
>way it may stop all the fighting on this NG but I don't think that will
>happen.

I'm kinda on the same wavelength, but I think that there are really
four groups here:

1. Legal CBers (can also be CBers);
2. Legal Hams (can also be Hams);
3. Illegal operators with a ham license;
4. Illegal operators without a ham license.

You might have noticed over the years that many of the anti-ham
activists here are really hams themselves. And many hams are also
proponents of illegal operation. But then again, many of the illegals
will never get a license because they are too lazy, too paranoid, or
whatever reason. Some illegals won't even operate on the Citizen's
Band simply because it's legal (Tim Nebout is a good example).

From what I have seen, on Usenet and elsewhere, legal hams and legal
CBers don't have any real problems with each other. The problems are
between the illegals and anyone that disagrees with them (legal hams,
legal CBers, responsible citizens, the FCC, the Communications Act of
1934, etc). So the real bickering is between two groups: not between

the CBers and the hams, but between the people that respect society and people that reject it.

It's an endless argument. But the argument is actually moot: The fact that such an open disagreement exists, and is discussed publically, is testament to the success (and acceptance) of the same society which they claim to reject. This contradictory behavior defines them either as hard-core hypocrites or as ignorant trogs; take your pick.

You might try looking around for 'fox hunting' sites on the internet.
One of the activities that hams engage in is radio direction finding
(fox hunt) .... they place a low power transmitter somewhere, and then
try to find it.

Try

Subj: [rec-radio-cb] KLV 550 base amp question
Date: 7/13/2002 8:32:24 PM Eastern Daylight Time
From: oneqck76ta@aol.com

A friend of mine brought me a brand new KLV 550 base amp that he had bought from copper (I know, should have gone else where) and he went to do the mod for it and when he did he jumped the wrong two pins inside (he put the jumper
on the two closest to the front pannel insted of the two rear posts) and he said he heard and seen a super small spark in the front of the main board of the amp and now it will not key up. I thought it was maybe one of the diodes but I did replace one and still no go. The two big resistors (100 ohm 2 watts) in the front and center of the board shure do get hot now. Any ideas what the problem could be? I told him to box it back up and send it back for an exchange but this is copper we are talking about. I have not really had to
much time to look at it and am away from home right now but just wanted to see if anyone knew of anything I should look for. Thanks a bunch in advance. If any more info is needed let me know and I will try my best to answer it.

Later,
Kevin

Unlicensed ham is one of them epoxymorons. You can't be a ham and
be unlicensed. If a cber is operating at 28.055 then he is just
another cber operating illegally in the ham band.

> between the fiberglass and the copper, it corrodes the copper very
> quickly and thoroghly.
===

And the wire up the centre is usuaully thin, which does not help with
the efficiency of the antenna.
The fact that the "DV27" antennas were illegal here in the 80s (only
base loading was allowed) made them seem better as they were top
loaded and outlawed, and gave them cult status. But the steel whip
base loaded antennas performed much better.
A fine example of how shouting "don't do that" often has the opposite
effect, even to the point where people refuse the better option. If people
here had of been told how any claimed gain from the "top loading" was
outweighed by the larger loss caused by the thin wire used, maybe they
would never have used them.

Regards,

Brainbuster.

> calibrated for Doppler-type work.
===

The Doppler effect is fine... if you are trying to bust their ass for speeding while under the influence of RF exposure. Maybe you could prove a link between speeding motorists and RF exposure from illegal CB?

As Doppler relates to the shift in frequency caused by an object's motion, it is used for measuring the speed of an object by bouncing a signal off it and reading the frequency shift on the returned signal.
It is NOT applicable to objects which are not moving, as there will be no Doppler shift. So, it is NOT used for direction finding or distance measurements... that's RADAR (or, for underwater tracking, Sonar).
Also, as the frequency shift can be small, a "CRT" (more accurately, a CRO) is not the device to be viewing it on. What you need is some form of digital readout.

What you are describing sounds similar to a device available on this side of the "pond", referred to as an "IFR". Great piece of tackle... The model I have worked with Receives signals to 1200 MHz, has built in signal generator, CRO, spectrum analyser, tonepad for telephone number dialing, plus lots of other features. Great for checking the output of a transmitter for unwanted emissions or excessive output or for tuning a receiver for best reception (with a SINAD meter), but you would track with it the same way as with a standard radio... with a directional antenna.

If you are going to BS the group, at least do a bit of research first... so you at least know a bit of what you are on about.
Save yourself time and money, a good directional antenna and a standard receiver with an RX level indicator is all you really need.
I have seen CBers track a signal across town and get to the source in just a few minutes with a standard CB setup. And they are not technical people, just CBers who enjoyed tracking signals on "CB Foxhunts". One who put a K40 on the boot of his car, would go to the nearest roundabout, go round it once in each direction while watching his meter, then name the place to within a few hundred yards and go straight to them.

Regards,

Brainbuster.

Off topic, but very interesting stuff.

In the UK, drug laws are being relaxed. It will no longer be an arrestable offence to possess Cannabis, although is seems it will be illegal to sell it. Now, if it is still to be illegal to cultivate the plant, then possession is proof that an arrestable offence has occurred (grown or sold to you).
When you hear that certain members of parliament were, in their youth, "druggies" then it becomes all to clear why it is happening. Even the courts seem unwilling to do anything about the problem. . .

A man was caught "red handed" when he tried to sell drugs to an out of uniform policeman. The estate the "dealer" lives on and where he tried to make the sale is known as... wait for it...

The Bronx.

Yep, the crime rate is so bad that people will not leave their homes after dark. The estate is riddled with drugs (the cause of the crime rate), and a young schoolgirl died from sniffing lighter fuel (not the first child on that
estate to die in similar circustances in the last few years).
I have been told (by a council employee) that the estate was covered in used needles until they finally got them cleared, and now they have a special needle bin on the estate. And where is this needle bin?
At the side of the playing field and toddler play area!!!

The estate is so rough, even the dogs walk round in pairs!!
So, with such severe drug and crime problems on the estate, what did the judge do with the man when found guilty of dealing drugs?

Basically, let him off with a "be a good boy" warning. You can get more than that for driving with a broken tail light.
One more druggie back on the street.
What the hell was that judge sniffing just before he made that decision?

Regards,

Peter.

I have notice that, when cornered, Aagent Aaron will scream "Fake, Fake".
He did the same thing when he dropped his guard and posted a Spam e-mail to
some of us at the same time as posting on here... and his IP number matched
that of the e-mail, proving that he sent the Spam e-mails to us.

The more he screams "waaa, it's a fake", the more we know it has to be real
and bad news for him.

Regards,

Peter.

BZZZZZT! A CB'er operating at 28.055 MHz is not a CB'er or a HAM.

He is an unlicensed operator. He is not considered a CB'er at that point.

Actually, Scott, the real answer is 'it all depends'. Kinda like Aaron; to some, he's a pain; to others, he is the comic relief. We could start a discussion - SWR into the antenna really doesn't matter as long as coax loss is relatively low; SWR into the rig IS important. So ... what is your choice? Pain or comedy? ;)

73 from Rochester, NY

The subject is from a document at http://www.nas.edu/bpa/corf/view1195.html
This has been quoted in this illustrious newsgroup by some wayward
interlopers.
Fact: CB never appears in the document. Most of the possible interference
mentioned is amature (read HAM) bands.
Fact: Many of the big radioobsevatories are located in countries where 11m
dx'ing is allowed.
The really sad part is that it is an exciting proposal to eventually place
radio obsevatories ON THE FAR SIDE OF THE MOON.
The reason is to get away from all the interference. Commercial and
Imature whoops forgot to spell check again:)
If the ARRL cared a whit about the progress of our understanding of the
universe they would give the astonomers a break and buy nextel. Heck another
gov program since there all on SocSec anyway...What would that be..maybe 60
phones for all the Hamies under a hundred yrs of age?

snip

Actually there are 3 groups here
1 cb'ers
2 11meter DX'ers
3 Hams that dont have the common decency to stay in there own newsgroup.
I don't believe someone who is such a rude obnoxous net citizen can
operate a radio in any other fashion. 11meter DX'ers are way more
responisble on the net then Hams. I have yet to find an 11meter DX'er
flaming and harasing Hams in there own groups. I have seen newbies ask a
newbe question and treated with the perjoritive "He must be a cb'er"
I don't want a liscense cause the evidence in THIS newsgroup shows me that
the Ham bands are filled with trash talk.

Source record: 130127

there are many of these on the market, which ones are the best for reducing rf-interference"t.v.i." i know they are designed to work over a much wider range than "cb-11 meters",but some have to be better at this than others. so which is the best? (for strickly 11 meters). is it possible to modify one of the better ones so that it is an even better filter? in other words,"narrow" its capability to work best at 11 meters? has anybody had any "real" success at this type of modification?

The cber is also agreeing to abide by the rules governing the cb service when he purchases and uses a cb radio. Just because he hasn't taken a test and issued a license does not make it any less illegal when he breaks the rules. It is the duty of the operator to know the rules. <

Yup, no doubt, it is. But I offered up a plausible possibility for how it could happen. "What if'" scenarios all of a sudden aren't any good anymore? <g>
You're absolutely right, there is no excuse for not knowing.

>He should know that there are only 40 channels in the cb service, if he doesn't then that is his own fault. <

Well, I dunno about all that. What if (Please pardon it this one time and I swear I will never use the ridiculously lame losing line of "what if" again) the guy is a new ride along or driver who has never been into cb...there are probably whiz bang young tech kids that for one reason or another have never even seen a cb, let alone know where in the freqs they may operate, or even how. SO, he's out doing his first solo run but with other drivers in their own trucks. They approach a big city and the noise from the damn hammies with their big radios on 19 is just causing terrible communications for the drivers. So the driver says to the rookie to "switch your PA switch on and off 2 times." The guy could think he is on a company channel. After all, them Mayflower drivers are worldwide in skipzone..even gots dey owned channel!

American Radio Relay League

I f you live in an antenna restricted community, you may cite federal preemption or PRB-1. PRB-1 mandates that you must be allowed to erect a sufficient antenna system to effect reasonable communications. Guess who you can thank for that? Technically, it applies to ARO's, but a Tech ticket is easy to get and a 2m wire antenna can also be made to work on 11m. Ever check out the ARRL antenna handbook? It's filled with great stuff for the communications afficianado...those principles all apply to 11m too.

Knock 'em all you want...but they've already helped you in more ways than you realize.

1106. Re: band-pass filters

Newsgroup: rec.radio.cb
Date: 2002-07-14 16:23:51 UTC
From: Mad Dog <lgsast@strato.net>
Message-ID: <ags8o5$o7dhl$1@ID-20128.news.dfncis.de>
Source record: 130137

A bandpass filter works exactly like it sounds.
It allows a narrow band of frequencies to pass thru while blocking
everything above and below it's cut-off point.

On I-40 in Tennesee one of Vobs buddies was looking for illigal operators.
He found a mobile on ch 19 using WAY to much power.
He found the source. A brand new Crown Vic parked in the median behind a bush. His foxhunt gear worked! This guy makes an illegal U-turn onto the median next to the offending Crown Vic and startes yelling at the guy about illigal power bleedover being a keyclown and calling the FCC.
The poor guy didn't see the uniform until the officer stepped out of his "plain brown wrapper"
Unfortunatly the nearest broomstick was at the stationhouse:)
Aparently officers talk to truckers on there police radios. BTW they are distictive by the fact that they are the best sounding radio I have ever heard and quite powerfull.

There is no such thing as a unlicensed Ham,you are either authorized to operate on a band or you are not. A Ham is a Ham even when he is on 11meter. But i don't use my call letters when i use 11meter, i use my handle.

Hi all,

My TS-570 only puts out appx. 60W on SSB. On CW it's exactly 100W.

I want some more power from the rig. How do i do that? In the TS-50, 450 and 850 there is a VR15 that i can adjust. How is this done in the 570?

Thanks,

Administrator.

I think what you have in mind, Gunsel, is a pretty standard 30 MHz lo-pass filter. Passes everything below 30 and starts chopping things above 30. In other words, it passes Low. Actually, it is a 50-ohm pi-section tuned to 30 MHz in a box so one is about as good as another if the SWR is good and the shield does not light up.

They will knock down harmonic interference but not things like power-line coupling. If you have a problem, see what channels you are nailing. Channels 2 and 5 are harmonic relations to CB; if you are blowing up much else, it is probably not harmonics at all.

Use the e-mail if it makes you comfortable.

Dick, BK

> It's an endless argument. But the argument is actually moot:

The argument is NOT moot. The simple fact that many more people are sand-bagging on the side, just reading the various posts, makes it all worth while. The word has to get out to those who many not have made up their mind whether to operate legal or not. A point needs to be made that there is in fact a rather vocal group that points out the pit falls, and the trouble, one may find themselves in if they choose to go the illegal route. In fact there is nothing wrong with operating totally legal, and the opinions of the pirate operators are not the only opinions out there. The fence sitting CBer needs to understand that should they choose to go the illegal route they are playing with fire, and will sooner or later will get burnt. So the endless debates on this news group are not waged solely to convert the already hard core pirate CBer, but for those who check in for advice etc., and have not yet made up their mind.

So long as the rig can handle the SWR you really don't care. Most ham gear can handle a SWR up to 2:1 before the rig starts to reduce output power. I would think that a good quality CB rig could do as good if not better since the radio was designed to be installed, and operated by non technical people, thus a bit more tolerant of the match found at the antenna terminal.

NOT! Nice try, but it is well known in the Jupiter, Fla area that this guy goes by
the "handle" of "Rabbit Ears" and was an avid CBer. If you had read the story
s l o w l y as befits your reading comprehension (apparently), you would see that
he was a CB guy who got onto 10 and 2 meters, QRMed and interferred with the
Amateurs. Those hams DFed him and turned him into FCC. Now he faces 8
years and up to $100,000 in fines. He was no more a ham than my cat is a Cocker
Spaniel. He was an example of the unusual idiot that believed that he could
do whatever he chose and nothing could be done to him. He continued to harass and
threaten, and interfere with the hams-even going so far as to ram one ham's car. If
he'd done that to me, he'd had about 230 lbs of me all over him. I'd not
hesitated to jack his a** up around his shoulder blades!

You're kidding! "Only base loading was allowed"? I'm
afraid that's just not true. There was never a restriction
on how an antenna was 'loaded' during the '80's, or at any
other time, for Class-D CB.

I hate to burst your bubble, but that's how Derek's Trucking got his warning
in
Cary, NC. It's how an outfit in Idaho (I believe) got its warning. You
apparent-
ly don't know that Riley Hollingsworth is a ham as well as a legal beagle
for FCC.
IF you don't think he is interested in protecting the ham bands from illegal
operators, you are sadly mistaken. If you want to see, at least 20 examples
of
warnings and busts, some of which are those can-do-no-wrong truckers, just
visit
CB City's message board. Just about all those warnings originated from his
desk.
Tell ya what, why don't you ask Riley yourself about the 10 meter issue?
Send your email to rholling@fcc.gov . He DOES answer email, tho it may take
him a
few days to get around to it. I am telling you the guy IS serious--I've met
him. His
home town is only 35 miles from me and he comes thru here on his way there.
I
talk to him on local repeaters. He is also hell on rogue ham operators as
well, re-
cently popping 3 for operating on that precious "freeband". The rest of us
are
HAPPY to see it and support his efforts to remove the bad operators from
the
bands.

I hate to harp on it, but ole Rabbit Ears down in Fla thought he was
invincible as well. Sure, he just kept on and on--which was what got him in
such hot water.
But if you can't see the trend, then no one can help you. If you are hoping
for some
sort of radio "anarchy" it ain't gonna happen. Keep playing radio roulette,
and eventually your number will come up

73

>>Antonio/South Texas area"<
>
>
>Then, when shown he indeed said he what he claims he never did, failed
>with:
>
>>OK, I usually<

I've learned that one of you twisting tactics is to quote (and I use that term VERY loosely) out of context, which you have just done. At that point you were on the idea that I had claimed to have busted someone. I didn't and this sentence doesn't say that either.

>
>But in your post you said "NEVER". Now you are attempting to say
>"USUALLY".
>The two have separate meanings and are NOT interchangeable. So we now
>have you lying after I told you that you had said it. You instantly
>denied it (you LIED).

Again, "quoting" out of context and combining two issues. You accused me of saying that I was an "FCC OFFICIAL OBSERVER." What I said is that I never said that I was an "FCC OFFICIAL OBSERVER." What I USUALLY say is that I am an Official Observer (notice, FCC not there). But what I am is a volunteer member of the FCC Amateur Auxiliary which can be said to be an FCC Official Observer. I USUALLY don't say that. It's still true I am an FCC OFFICIAL OBSERVER as a volunteer in the FCC Amateur Auxiliary. Twist it as you want. You can call me an "FCC OFFICIAL OBSERVER," you can call me an "OFFICIAL FCC OBSERVER" (which is intuitively incorrect because I don't observe the FCC), you can call me a "MEMBER OF THE FCC AMATEUR AUXILIARY," you can call me an "OFFICIAL OBSERVER" but you doesn't have to call me Johnson. (maybe that's before your time Twisty.

>I had to actually show you your own words, and now you say you didn't
>really MEAN it that way, which is exactly what I have been shwing all

>along...that you really don;'t know what you mean. Your lies have
>serously muffed you up, and you sit and attack the messenger for
>pointing it out and merely asking confirmation..
>

No, it's you who don't know what I mean, see the above response. It's confirmed above and the messenger has been tampering with (twisting) the message, that's the issue here.

>> don't refer to Official Observers as "FCC Official
>>Observers" but if you really want to get technical <

>No, I don't want to get technical, but i am certain you do, as your
>mangy tail is caught in the door and you would rather talk about
>"technicalities" while accusing ME of semantics.
>No, we will stay with the issue at hand.....YOUR words, more of what you
>claim you NEVER said.
>

Then what's the issue of whether I call myself an OFFICIAL FCC OBSERVER (your words), an OFFICIAL OBSERVER, an FCC OFFICIAL OBSERVER or a member of the FCC Amateur Auxiliary? They all mean the same thing.

>>It was me and 14 other official FCC observers..<
>
>we are "FCC Official Observers."

And your point is? So I couldn't remember using those exact words. So what. It's not a lie to say that I didn't say something. I'm sure you've never done this before. Ok, "you caught me!" Was I lying? Nope. I just couldn't remember saying those exact words. Were those exact words a lie? Nope. But I'm sure that this little technicality will become the next issue.

>It doesn't matter if you call yourself keystone cops, the fact remains
>that you are confused and lying like hell. ANOTHER claim you made, then
>claimed you didn't, then were shown where you did, and are swallowing
>crow as quick as your mouth will allow me to shove it in.

Nope, no crow here. Read above. If I had said that I am 73 inches tall once and not remembered saying it would it be a lie to say that I'm 6'1" tall? Nope because both are true. Again, you are arguing semantics which seems to be the only thing you can argue.

>And they are not semantics, Kevin.

Sure is! Whether I say I am an OO, FCC OO or Official FCC Observer doesn't make a difference. They are all true.

>They were lies and shown as much. I am beginning to
>wonder if you even know what semantics are.

You are arguing nothing more than semantics which means you arguments are over the phrasing of what I said and not the meaning of what I said. That's

what it means to argue semantics.

>Now you are
>attempting to debate another subject, one of what you MEANT to say, one
>of which you are now attempting to imply you meant.

Oh, the way that you IMPLIED that you want money for information that you had already obtained? Semantics?

>But the issue was,
>and still is, you, are a liar. You asked for proof, I gave you several
>examples.

No you argued that I said something about being an OFFICIAL FCC OBSERVER. I haven't seen one bit of proof about anything else. You said that I lied about the "busts," where's the proof? You have "pinned me down" on the phrasing of something that I said and nothing more.

>You call it semantics, the fact remains that you referred to
>yourself as an FCC observer, then turned around and lied about it,
>claiming you NEVER said it, that it was a figment of my imagination.

Is this the only song you know? Get over it, you are arguing semantics over what I had forgotten that I had said. Like I said, and you ignored, I don't usually say "OFFICIAL FCC OBSERVER" so I had forgotten I had said it. So what if I did say it, it's true. You think you've pinned me down over a semantic issue. Grow up.

....

>>Check out: http://www.arrl.org/news/stories/1999/04/08/3/ The title of

>bust, or
>what part of you denying you never called yourself an official FCC
>observer when in fact you did and denied it, or what part of your other
>lies do you feel were taken out of context? I mean, YOU made the claims,
>then deny them. Are your communication skills that poor that you fail to
>express yourself, can't find the correct words? Attempting to blame your
>lies on your poor communication skills might fly with a newbie, but
>you've been around for a while....lying. BUT, you run on ahead and try
>and convince the world at large that you were quoted out of context each
>and every time. Call me when you think you were successful.

Ok, you got me on this one. I never said that I made busts. That was your twisting. But please feel free to scan this entire thread (and the previous one) to see if I did claim making busts. It's not my communication skills but your reading and interpretation skills (twisting skills) that are in question here. Apparently you (and maybe Moped) are the only ones having trouble understanding what I said.

>
>>I never said that I made busts. <

>Nope, you didn't. What you actually wrote, verbatim (again) was:

>"BZZT! Strike two. I never claimed a single bust. Again, a product of
>your imagination."<

Now that you admit that I never claimed to have made busts I suppose this part is settled.

>
>But, we find you CLAIMING, it WAS a bust, after yet ANOTHER denial that
>you never said it...
>To wit:
>
>>"I don't believe I ever said successfully prosecuted I said "busts." If
>>I did then it was misleading and unintentional." <

>Oh, so you said it, but didn't mean it, but didn't mean it, but said it,
>but meant it and didn't believe you said it, then just denied it, and
>are back claiming you didn't mean it when in fact have been shown you

>said it..

>>I said that I participated in busts. <

>And then made several posts that they weren't "busts" at all, that the
>word "bust" was my choice. I once again showed that to be another in a
>long string of bold-faced lies, and now you have flip-flopped yet AGAIN,

>busts, claiming once again, that they did happen, but not in the manner
>in which you applied the term. That's all nice and stuff, but, just like
>you denying calling yourse;lf an FCC observer, that really isn't the
>issue, is it Kev 'ol boy? No, the issue is (again) many of your claims
>have been shown to be lies. Where there is smoke there is fire.
>

Ok, I'll bite on this one too. Since you are having such a hard time
understand the meaning here's how it works. I am a witness providing
evidence for a bust that the FCC makes. Yes that means I participated in a
bust. I was not there, I did not deliver the notice, I did none of the
"cop" things but I certainly participated in the effort. Twist that as you
wish.

>>Only the FCC can make the busts.
>>Like I have said a couple of times, me and several others provided
>>evidence for these busts. We never made the busts. You are arguing

>And the wire up the centre is usuaully thin, which does not help with
>the efficiency of the antenna.

Some of them have large wires wound around the fiberglass and some
have smaller wires wrapped up in the rod. But the poor efficiency of
fiberglass antennas has little to do with the wire size. One of the
major losses comes with the fiberglass itself, which is a somewhat
lossy dielectric at RF frequencies. Another reason for their poor
efficiency is the helical nature of these antennas: half the signal is
polarized vertically and half horizontally, so half your signal is
wasted because most of the CB antennas are vertical. That's why they
are sometimes referred to as 'helical dummy-loads'.

Hey, didn't you say something in another post about research and BS?

"If you are going to BS the group, at least do a bit of research
first... so you at least know a bit of what you are on about."

I agree. Try it next time.

Actually, Bert, the way I read ALL the info that Mr LaForge sent me is
that the FCC has administratively decided that the listed radios are
'Bad Juju' (even thought they were at one time legally imported into
the US), and not to be tolerated even in the hands of licensed
amateurs. Check out

www.members.aol.com/akwusmc/radios

and see what you think.

Here's a hypothetical: If I'm an amateur operator, and I have one of
these offending radios, but modify the unit to power down to 4w on the
11m band, am I still a criminal?

>actual court appearance to take place, let alone a conviction by the
>FCC.

I guess you missed the part where I said that a great majority of these issues never make it to court. The evidence is so overwhelming that the guy's an idiot to push the issue in court. What you have "verified" does not make me a liar. I believe I said something like these guys are either on their way to court, in court or through court. Please show me the lie.

>>So then you HAVEN'T actually made contacts to "prove that I am lying."

>Ask a lawyer that worked for the FCC is your time frame is even remotely
>possible. There is no chance of your lie being even remotely true. That
>won't cost you anything, as there is a hammie readily accessible that
>loves to disburse wisdom concerning his golden days with the feds. All
>you gotta do is ask, Muenzler, not dance.

...and his name is? "Lawyers" don't work for the FCC. IF he used to "work for the FCC" then he was a federal prosecutor assigned to the FCC. Please what's his name so I can verify his previous employer, his bar status, etc.

>>I understand now. YOU are lying. Or perhaps, again, "lying" is too
>>strong of a word. You were misleading, you misrepresented what you had
>>actually done, YOU LIED! <

>(Chuckle) Hehhe..Sorry to burst your bubble, Kevin, but you're gonna

>fodder for your featherless cap..if the FCC brought anyone to court AND
>convicted them as you claim, within the time frame you claim, it would
>have been the FASTEST convictions for cb or hammie related behavior to
>date.

Ok, again you are putting words in my mouth. Did I say convictions? Nope, not once. Just as I never claimed to have made the busts. Just because someone has been served (received a Notice of Apparent Liability or "NAL") doesn't mean that they are convicted. You're causing your own confusion Twistyboy.

>>You see I have never seen your brain, I don't know anyone else who has >>ever seen your brain. In fact I doubt that anyone in the entire world >>has seen your brain. So we can't verify that it exists at all. So if we >>use your logic of "unable to verify" then your brain doesn't exist. < >
>Your trouble remaining focused on the subject and attempts at making >your agenda one of spewing your venom and insults my way is dangerously >close to becoming trollish.

No trouble remaining focused Twistyboy. I was showing how your logic doesn't work. According to your logic since you can't verify my claims they are lies. Since I can't verify the existence of your brain then, according to your logic, it doesn't exist. Sorry I made it so complicated for you.

>But everyone that frequents the ng can see the lies you tell and lie >about some more. Do you have an alcohol problem, Kev? You seem to be >incapable of posting and focusing on any issue except for your intense >personal dislike of me.

I thought you don't make personal attacks TwistyBoy. Now we've added hypocrisy to twisting.

>>They, like I have said, can see that you are the TwistMeister.<

>They most certainly can, Kev, and all that have met me and most that >have been around here any length of time also know I don't lie...period.

No, you don't lie. You twist someone else's words around and call them a liar. Misrepresentation is the same as lying Twistyboy. Above is a perfect example. Now you say that I claimed convictions. I KNOW I never said that.

>> So you say that I am incapable of focusing? <

>Absolutely! Of course you are. You have now resulted to insults in each >of your postings.

Let's see. The original title of the thread was the I claimed 27 busts this year. Where has it gone from there. FCC OFFICIAL OBSERVERS, convictions, busts....

>>I have been trying my best to follow your twisted "logic," claims and >>accusations. You seem to have a paranoia problem too. I don't >>"personally dislike" anyone in this newsgroup. I know, you aren't >>paranoid but everyone thinks you are. Poor little Twisty, thinks >>everyone hates him. <

>>>checks and a 25.00 NSF fee.

>>General consensus? Get Real Twistyboy! <
>I know, you use the word "boy" as it
>must make you feel like a man.

No I use the word "boy" because you are acting like a 12 year old who is
trying his best to twist his way out of a bad situation.

>If referring to me in such deferred ways
>boosts your ego, I am glad to be of service. What this ng needs less of
>is another angered hammie that feels like a lowly cber had a way bigger
>member, er, number, uh..member number than he.

BWAAAAHAAAAHAAAAA! Testicular Torsion seems to have taken it's toll on you
now TwistedBoy.

>>The only "general consensus" has been people who think you are
>>deranged. Only Modeaholic (who I think is you) has come to your side. <

>Au contraire. This is a cb ng and I am way more representative of the
>average cber than you will ever have a clue. Your beliefs are radical,
>condescending toward cbers (be careful here, you have left a slime trail
>of slams against cb over the years..I'd go check the archives before you
>need another helping of crow jammed down your chickenhawk neck.).....

What does this little rant have to do with the original subject? True or
not it's irrelevant. But I'll bite. You, again, are taking me out of
context. My general feeling toward CBers is that many, not all or most, but
many are undisciplined and advocate selective following of the rules. They
support the louder is better and the biggest linear gets the channel.

11-meters has degenerated into the cesspool of the electromagnetic spectrum because of those (like you) who do advocate selectively obeying the rules. That's the extent of my "radical condescending toward cbers" and I will not deny any of it. What you have conveniently left out is that I am a CBer as well as a ham operator. During natural disasters like the one we just had here in south Texas as well as numerous others CB operators were indispensable. It would have been much more difficult to get information if it weren't for the CB operators that came forward and volunteered. Unfortunately these CB operators are the exception and not the rule.

>>But you, apparently, already have made those phone calls so you have
>>already "paid the fees" right? Oh, you want reimbursement? I think that
>>this is just another attempt to cloud the issue that you are so wrapped
>>up in yourself that you can't see when you have been cornered. <

>What you think doesn't matter to anyone. IF you wish me to perform a
>service, you will pay accordingly.
>

Nope, not now since you've been caught in a "put up or shut up" situation. If you don't "put up" everyone will know that you are a liar. But no, you demand money for your "services." Get real! Like I said, I'm not as stupid as I think you are.

>>There's no way out of this one. Put up or shut up. You made claims that
>>you had some sort of proof that I am lying.<

>Yes, but only after you lied.

Like I said, let's have it.

>>Let's have it. Names of who you called, phone numbers of who you
>>called and the courts you called.<

>Certainly...after you provide proof of your claims...after all, YOU made
>the claims first, I merely asked you to clarify first. I qualified
>several of your lies with proof, and granted, YOU have even qualified
>several of your own lies with proof, but I asked for a clarification
>first, and you failed to produce. Now you are attmpting to ignore that
>inquiry, but ask the same of me....hilarious.

What did you just say? I think you are wanting me to prove something. Prove what? You called me a liar, in this country the one making the accusation is required to provide the proof. Talk to that "FCC Lawyer" friend of yours. Maybe he can explain it better than I have.

>
>>But obviously you don't have them<
>
>Which is the reason you went bezerk in the first place..you obviously
>don't have any proof.

Proof of what?

>>and there is no way in God's green earth that I'm going to send you a
>>single penny. <

>Well, I kind of figured that. A perfect example of someone who wants
>something for nothing...asking for handouts, wanting someone else to do
>the work because you're too lazy, or worse, can't figure out how.
>Typical freeloader.

Hypocrite! You accused me of obfuscation. WOW, this is a wonderful
example. Sure "you figured that" and that's why you want money for your
"proof" that doesn't exist in the first place..

>I can hear everyone else in this newsgroup laughing too! <

>Indeed we are laughing, Kev, but you have a delayed reaction...that must
>run hand-in-hand with your poor recall and retension ability, as we have
>been laughing since day one when you made the claims. Newsflash Kev, ol
>chap: Many in here are way more educated in the ways of the FCC than you

>
>You already expressed your inabilty to pay, so what does my name or addy
>have to do with anything? Ask Frank, he knows where I live. He figured
>it out after I posted directions to my front door.

No, again you are twisting. I expressed my unwillingness to pay for
something that doesn't exist. Like I said YOU don't have the guts to post
your OWN name and address.

>>God must love stupid people, he made so many of them!<
>
>Too bad ignorance isn't painful.

Ignorance? Ignorance simply means a lack of knowledge, there's nothing
wrong with that. Trouble is that you are ignorant of what you speak and
don't have the integrity to admit it. You twist away and hope no one can
follow.

It should be obvious that the FCC can see through the deceptive
business practices of those that manufacture and market unauthorized
radio equipment.

>Here's a hypothetical: If I'm an amateur operator, and I have one of
>these offending radios, but modify the unit to power down to 4w on the
>11m band, am I still a criminal?

Technically yes, because the equipment, modified or not, is not
certificated (type-accepted) for use on the CB. If the purpose of the
modification is to comply with the intent of the law, the FCC probably
wouldn't care just as long as you don't sell it, but it would be much
easier just to get yourself a legal CB radio. And since most of these
'imports' are junk even for amateur operation, get yourself a proper
radio for that purpose as well.

>insults and attempts to make me your topic and you are way past troll
>status. ..in the red, Muenzler old chap, in the red.

hypocrite, old chap, hypocrite. It's like Sandbagger said, you twist and
then accuse people of changing the subject. You twist and then accuse
people of lying. You really should have that psychological problem checked.

>Kevin, WB5RUE<

>And that's the biggest shame of it all.
>Another piss poor example to ham radio.

You insult me (or at least attempt to) right after accusing me of insulting
you. You wonder why I call you TwistyBOY.

Assuming that Aaron is posting legit information, these radios can not
be operated on 10 meters: "As such, OET has further concluded
that these devices cannot legally be imported or marketed within the
United States for the reasons discussed below."

<snip>
>RFI is RARELY the fault of the transmitter.

Most consumer electronics have adequate rejection of RFI under normal circumstances. But they don't usually build stuff to reject signals from your neighbor's 1kW transmitter. These are not considered to be "typical operating conditions" for consumer electronics. So in that respect I would agree with you; except:

Even high-power RF can be done with little RFI if it's done cleanly. If your signal is going out only on it's intended frequency, there are going to be a lot fewer problems with RFI than if your signal is being splattered up the spectrum where it has a much greater chance of finding a resonant circuit in the neighbor's television. There are plenty of people that live next door to hams that don't have problems with RFI, not because their home electronics are protected against it, but because the ham is operating a clean station.

And then there is the problem of IF amplification: the IF of the CB is attenuated enough for legal power, but hook the output to an amplifier and it becomes a broadcast station to any receiver using the same IF. And since the IF path in the receiver is where most of the signal gain occurs, it doesn't take a very strong signal to be received. I'm finding this to be the case more and more often when RFI is affecting a whole neighborhood, and almost always happens at the 10.7MHz IF.

So for those reasons I believe your statement is wrong.

1155. Ranger/Magnum/Cherokee Radios

His budget just got axed to the tune of 13 million. It takes riley a few days to respond to e-mail cause that gov issue 8088 is realll SLOOWW. Aparently Dereks Trucking has more pull on capitol hill then a few Yams. Most of your posts were from years ago. Bush addressed the Yams to try to elicite some help in the war on terrorism. If Hollingsworth thinks he will spend money on tracking down freebanders hell be appliing for a job a Derecks.
Everybody knows thats trucks with Hazmat loads are the next target for highjacking by terrorists. The dirty lil secret is that FBI and homeland security are glad most trucks can put 35 watts and MUCH more with a kicker. Go above 28mhz you may get a warning below that the FCC gave in and handed the ball to the locals who know thats if you have problems go bust chops on the guy with the big antena on his house(the ham).

Basically, most of us don't CARE what the CBers do below 28 MHZ. That's the
whole point. Yet, Mr. H already HAS spent money tracking down
"freebanders".
He's still there. And the reason Riley can't always answer is, he is often
out of the
office on speaking engagements. No one can argue with someone whose mind is
made up and who is determined to ignore the facts. CB Radio is a "cult"
phenom-
a "toy" that became something that was not at all intended. Privately, most
of the
FCC agents would tell you, if they KNEW you well, that they wish CB would
just
die a natural death. OTH, the Amateur Radio Service is regarded in official
circles
as a proven resource that can be counted on in emergencies to provide
manpower
and professional, trained radio operators. Not "BREAK BREAK thar, mercy me,
thar, yuh gotta ole copy thar on this hyar Colorado Cowboy thar, go'rd 'haid
thar,
and kick hit back thar, shore thang thar, ah know whutcha mean thar, shore
do thar, BREAK! SQUEAK!! <<g>> The 28 MHZ line IS and WILL BE defended.

No reason for me to post inaccurate FCC information, nor have I ever
posted intentionally any inaccurate information on this NG, except
within the context of an obvious satire.

Regarding Grant, J.F.K., Jackson and Lincoln, etc. You have to ask
yourself....why hams would want to buy "10 meter radios" with 1-40
"channel knobs" and 15 khz steps?

Be advised, we're working on that issue. Note the Yahoo Auctions TOS
clause (below). Since sale of illegal CB amplifiers and "export
radios" violates FCC law, Yahoo will eventualy have to follow eBay's
lead in banning the sale of these items.

like >enforcing jaywalking or spitting on the street.
>
> My personal opinion - if they venture into 10 meters, they deserve
> what they get. If they keep it below, they should be left alone.

The FCC feels differently:

Q. I don't hear any other stations on "my" frequency, which is not
one of the 40 allocated C.B. radio channels. So what is wrong with
operating my radio station here?

A. You may unknowingly cause interference to legitimate
communications. Many of these frequencies may appear, to the casual
listener, to be unused. Some of the authorized users may be using
emission types which can not be plainly detected. Or, their
transmissions may be intermittent. You will not hear any legitimate
signals within the designated radioastronomy bands. However, just
because a frequency sounds clear, that does not mean that it can be
used without proper authorization.

Q. What are these other frequencies between 24 and 32 MHz used for?

A. These frequencies are assigned to many different licensed radio
services, both in the United States, as well as in other countries.
Authorized users include Maritime and Aeronautical radio stations,
standard time and frequency stations, international broadcasting
stations, amateur radio, and government stations. A portion of this
spectrum is also allocated to radioastronomy, where scientists are
attempting to listen to very weak radio signals coming from distant
stars and galaxies. No radio transmitters of any kind are permitted
within these radioastronomy bands, so any earth-bound transmitted
signals can completely disrupt radioastronomy observations.

I agree totally Rich. I went to the QRZ.com site and did a search for msgs on cb 11m etc and those losers make voob look human! Apparently only the best of the hams come to this ng. This is one of the best and most enjoyable ng's around. Ever visit alt.ham.dx? Its maybe a hundred posts(compared to 31962 here) and most posts where "where is everybody"
The funny thing is that the subject of cb gets more posts then anything else among the Hams. Hams talk more about cb and freebanding then anything else.
Ofcourse both Ham rigs and Cb rigs are toys. CB has legitament commercial use wher Ham has no legit use and are truely toys. CB is one of the most exciting hobbies out there and even Hams recognize this.

If anybody complains to ebay about ANY item someone is selling the just pull the auction. Then you receive a
"canned" message vaguely stating why it was pulled. They don't want to deal with any nonsense that might cut in
on their
zillion dollar profit. The loss of a few messily $$$ by dumping an auction or 2 is no biggie to them. There will
always be these chuckle heads (that plague many newsgroups) that think they are ebay and newsgroup police.
It's a shame because 99% of the stuff pulled is OK and does have the right to be on ebay.

Remember the Napster flap. All these dope smoking rock stars crying like ARRL members? Well they succeded in shuting down Napster.
The result is that now there are about 20 different programs for shareing files and downloading free music. Its worse then ever. This was an unintended consequence. The rock stars really believed once Napster was gone no one would swap files. Now record sales have slumped even lower and more music is free then ever b4.
Hams should clean up there own sorry mess before coming over to 11meters to complain. Someday the FCC may become the Federal Digital Comunications Commision and decided that Nextel quick-connect can replace the whole friggen mess.
Except for cb's Truckers will have those long after Ham dies.
"aint no feeling like chicken mobiling"

>Basically, most of us don't CARE what the CBers do below 28 MHZ.

Very true, historically, hams don't care about what CB'ers did on
their own CB "property". Because of this, CB'ers moved on to trashing
the "neighbors property", too. I'm not saying that hams should be
vigilantes or do the FCC's job of policing the spectrum, but I think
that when you see a neighbors property being trashed you shouldn't
wink and grin at the vandals and tell them "As long as you leave my
place alone I don't care what you do!" because, sure as the sun rises,
they'll be coming onto your property next. Being a good citizen
benefits everyone. Like it or not, the two services (CB and ARS) are
inextricably linked, and the more mature of the two has a
responsibility to be aware of what goes on in "the neighborhood". Do a
search on "Kitty Genovese" for an interesting analogy....

Frank, what you just posted is bullshit and you know it. Most RFI is due to audio circuits amplifying the signals induced upon them. Stop spewing your voodoo electronic hocus-pocus. Sure, it's possible, but not likely.

ROFLMAO.....
Jerry Ham is a toy a hobby and frankly does squat in emergencies. All police everywhere monitor ch19 cause it is the defacto channel for info. As for dying a natural death it looks lively to me. Heck all the Hams seem to talk about cb more then Hams do. Everyday truckers and cb'ers are saving lives disseminatiog real info and helping traffic flow. Hams meanwhile come to rec radio cb and whine.
As for 28mhz if the enemy is in your house drinking your beer and sleeping with your oldlady you lost the war. But well let you keep 6m...for now:)

You know, Kennie, it is conversations like this that convince me that
those saying that pesticides are mimicking estrogen may well have a point.
Maybe it contaminates diesel as well
because while comments like this might be made by my 14 year-old niece,
they would not be made by someone with a functioning set of testicles.

Kenneth, a spell checker won't help - it will not differentiate between 'there' and 'their'. The hams are not capable of buying Nextel - the large conglomerates are buying up the frequencies. Some time do yourself a favor and check who owns the various television stations in the US - or even your own area. Bands are allocated in an attempt to mitigate possible interference. This includes specifications as to harmonics and various unintended garbage. Whether amateur or cb, overdriving amplifiers or running class C certainly creates additional 'garbage'. This can cause interference. BTW, amateurs are limited to 1.5 KW. The really high erp can be found on UFH, but sometime check the erp on the commercial television and FM broadcast stations. The amateurs are a small drop in the bucket as far as potential emi is concerned. Besides, almost 100% of the amateurs don't overdrive amps, do run their signal into tuned antenna systems (read - little out of band garbage), and most run less than 200 watts (which is still excellent for worldwide communications almost all of the time). You'd best go back and re-read YOUR OWN POST concerning having a license and being liable for a lot more than unlicensed folks. Yes, please go back and read your own post (about the CDL) again. Check back if you ever figure that one out.

The "dope smoking rock stars" were just pawns, it was the MPAA and RIAA that were able to shut Napster and Audio Galaxy down.

> Hams should clean up there own sorry mess before coming over to 11meters
> to complain.

This has been happening for several years now, the bands are getting much better. Most of the long time lids on 75,40 and 20 meters are gone. Hams that run their gear on CB and the "freeband" get what they deserve. My hat goes off to Mr. Hollingsworth

When are CBers goin to ask Mr. Hollingsworth to help clean up their service? In fact,why do CBers find it so dificult to stay off the ham bands?

> Someday the FCC may become the Federal Digital Comunications
> Commision and decided that Nextel quick-connect can replace the whole
> friggen mess.

I doubt this highly, this is the first system to fall apart in an emergency. Centeral point systems are too easy to break under heavy user load.

> Except for cb's Truckers will have those long after Ham dies.
> "aint no feeling like chicken mobiling"

I don't think so, CBers have abused their service for so long that it's completely useless. What makes you think CB is going to out live Amateur Radio? I don't see the CB manufactures comming out with any thing really new, it's just the same old stuff they have been making for the 25 years. I would say it's safe to say CB will eventually be replaced by FRS and GMRS.

Your mind is working over-time here... A person is not a CBer unless they are in the band designated as CB use. If a person is in the ham band , then they certainly can't be a CBer at that given time. I don't know of any ham bands that are designated as CB, do you? Didn't think so...

I've just been looking at the new Magnum Delta Force 10 meter mobile rig on the Copper site. Anyone got any views on Magnum? It's certainly a very pretty looking rig. Is there a simple mod to convert it to cover 11 meters as well as 10 meters?

TIA

Hi all,

My TS-570 is only putting out 60W on SSB. I want it to be appx. 100W. I know how to do that on a TS-50, 450 and 850, but for the 570 i seem to have to go in a service menu and change it there.

Does anyone know how to do this? How to get in this menu and what settings to change?

Thanks a mountain,

Ton.

Here's a better suggestion: post on this newsgroup that you want to
run an illegal setup but you are too poor to do so. I'm sure that at
least one of these anti-American anarchists will send you an amp for
free so they can brag about it here. In fact, I'll bet you that just
because of this post, you won't even have to ask and someone will make
you an offer via email. But be careful: it might be an FCC sting
operation....HAHAHAHAHA!!! yeah, like THAT'S ever gonna happen!!!

> distictive by the fact that they are the best sounding radio I have ever
> heard and quite powerfull.

The "BS-O-Meter" was pegged 30 over on that one.

Let's see......

For starters, police radios use a frequency band that is way out of
range of the CB band. The closest allocation is in the 35 Mhz area, and
those radios and the antennas do not cover 27 Mhz. Most are channelized
by either crystal elements or programmable synthesizers, for the few
frequencies that the police normally use, and cannot be easily changed
to cover other frequencies.

Secondly, police radios normally use FM (Some newer systems in metro
areas use digital), which would not be compatible with AM on CB.

Next, police radios usually run no more than 50 watts, which would be
barely noticable on the CB band, where bootleggers typically run several
hundred or more watts.

But even if this were all true, then the cop would be guilty of
violating FCC rules. There is no provision in part 95 for police
personnel to operate power levels above the legal limit, or to use
radios that are not type accepted for the CB band.

Right, Kenneth. I've gotta admit, you are trying to make up for a few codeless techs here, but I'd bet you coffee for a week 99%+ of all roadside emergencies are reported by CELLPHONE. Ever heard of that, or do you want that frequency allocation too? Should cellphones go down, what do you do then? As far as a channel 19, who needs it? Over a year ago, all of our pay phones at work were out of order (no one cared). Then - the COMPANY phones for some reason quit working. Folks were scrambling to borrow someone else's cellphone (probably over half the production people carry cellphones with them - along with the stupid beeping). What do you do, run out and hit channel 19? I simply went to my locker and pulled out the ht. Hit the autopatch - and used the phone. I have access to 13 local repeaters, many of them with autopatch. By local, I mean within 25 miles or so. I've used that ht on a repeater over 100 miles away. What would you do back in the late 90s when a good chunk of New England and Canada were hit with an ice storm and ALL telephones and communications were out? Hit channel 19 and talk to someone whose communications were also out? Wait until after 10 am and before 6 pm and hope that skip was in? 'Cmon, give me a break. This wasn't even a very good troll.

1) Push the button marked "PWR"
2) Turn the "MULTI" control to select the desired level.

Couldn't be simpler.

It's the only type of cooking a "real" man will do. When a man volunteers to do such cooking, the following sequence of events takes place:

1. The woman goes to the market to buy the food;
2. The woman fixes the salad, vegetables, and dessert;
3. The woman prepares the meat for cooking, places it on a tray along with the necessary cooking utensils, and takes it to the man, who is lounging beside the grill;
4. The man places the meat on the grill;
5. The woman goes inside to set the table and check the vegetables;
6. The woman comes out to tell the man that the meat is burning;
7. The man takes the meat off the grill and hands it to the woman;
8. The woman prepares the plates and brings them to the table;
9. After eating, the woman clears the table and does the dishes;
10. The man asks the woman how she enjoyed "her night off."

And, upon seeing her annoyed reaction, concludes that there's just no pleasing some women.

1222. Re: Kevin Muenzler, WB5RUE claims 27 radio busts this year alone,...

Newsgroup: rec.radio.cb
Date: 2002-07-15 15:02:04 UTC
From: twistedhed@webtv.net
Message-ID: <7438-3D32E3EC-115@storefull-2312.public.lawson.webtv.net>
Source record: 130252

From: wb5rue@qsl.net (Kevin Muenzler, WB5RUE)
"Twistedhed" <twistedhed@webtv.net> wrote in message
news:21444-3D2F02D7-100@storefull-2317.public.lawson.webtv.net... What I have done, is verified that the
procedure involved with the FCC takes much longer than six months for an actual court appearance to take place, let alone a conviction by the FCC.

>I guess you missed the part where I said that a great majority of these issues never make it to court. <

What did you do, drink all weekend and
do nothing but reply to my posts?
I guess you were drunk when you claimed that all 27 of them went to court since the 27 of December. Now here you are trying to enter another equation.

>The evidence is so overwhelming that the guy's an idiot to push the issue in court. What you have "verified" does not make me a liar. I believe I said something like these guys are either on their way to court, in court or through court. Please show me the lie. <

You said 27 were already IN court, all made to appear since Dec 27. See, you don;t know what you said.
Do you need to see it for yourself before you lie about it, deny it, and insult me for pointing it out?

>So then you HAVEN'T actually made contacts to "prove that I am lying."<

Of course I have.
Ask a lawyer that worked for the FCC is your time frame is even remotely possible. There is no chance of your lie being even remotely true. That won't cost you anything, as there is a hammie readily accessible that loves to disburse wisdom concerning his golden days with the feds. All you gotta do is ask, Muenzler, not dance.

>...and his name is? "Lawyers" don't work for the FCC. <

Wana bet?

>IF he used to
"work for the FCC" then he was a federal prosecutor assigned to the FCC.
<

Damn Kevin, the whole group is howling at your lame azz, as most of the group is aware of who this gent is and he was indeed an FCC lawyer. Instead of coming off like a jackass in all your posts and trying to

"get something on me", you really ought to slow down,,,you're making quite the fool of yourself with your ignorance.

>Please what's his name so I can verify his previous employer, his bar status, etc. <

Oh, man. Talk to Lelnad. He claims his name is Phil Kane. One of his crossposts are in here now. But merely watching you flop around like this is about as far as I can go.

>I understand now. YOU are lying. Or perhaps, again, "lying" is too strong of a word. You were misleading, you misrepresented what you had actually done, YOU LIED! <

(Chuckle) Hehhe..Sorry to burst your bubble, Kevin, but you're gonna have to wake up much earlier than that if you are going to look for something to personalize.

>Stop being paranoid Twistyboy. It wasn't mean personally, just like you calling me a liar is not meant personally. You're a hypocrite too.<

Actually, I'm not. I really haven't insulted you except for referring to you as a liar, and as you claim, it's really not a lie when it's true, so prove it's not true.
Now you are espousing and sharing your true ignorance concerning your non-knowledge of the FCC. But you did that once, concerning your lies abuot you assisting in getting ALL 27 radio violators to a federal court apearance since the 27of December. Rock on, lieboy.

>Did you "make calls" that were unable to verify my claims or did you make calls that were able to contradict my claims. There is a BIG difference. <

This is getting better by the day. Give you ego trippers enough rope and ya'll piss all over your own legs after the selfhangin's. Here's more fodder for your featherless cap..if the FCC brought anyone to court AND convicted them as you claim, within the time frame you claim, it would have been the FASTEST convictions for cb or hammie related behavior to date.

>Ok, again you are putting words in my mouth. Did I say convictions? <

Nope, you said busts.

>Nope, not once. Just as I never claimed to have made the busts. <

But you DID say busts. Why do keep saying you dind't say busts when you did?

>Just because someone has been served (received a Notice of Apparent Liability or "NAL") doesn't mean that they are convicted. You're causing your own confusion Twistyboy. <

Not at all, junior..you claimed busts, and you claimed 27, and you claimed all in Texas federal court since Dec. 27.

>You see I have never seen your brain, I don't know anyone else who has ever seen your brain. In fact I doubt that anyone in the entire world has seen your brain. So we can't verify that it exists at all. So if we use your logic of "unable to verify" then your brain doesn't exist. <

Your trouble remaining focused on the subject and attempts at making your agenda one of spewing your venom and insults my way is dangerously close to becoming trollish.

>No trouble remaining focused Twistyboy. <

Oh, so the trolling is intentional. Now how did we all figure that?

>I was showing how your logic doesn't work. <

With insults? You have PLENTY to learn, grasshopper. Effective communications skills, peppered with a bit of temperance and diplomacy will improve what you lack.
Logic, hmm? Logic that says when I point out you said something when you denied saying it, calls for you to tell me it was a figment of my imagination and that I'm a liar? Then not even the good graces to admit it when caught, but to blatantly and callously claim "I forgot?" With your logic, no one is interested. You're an island unto yourself.

>According to your logic since you can't verify my claims they are lies.<

According to ANYONE's logic, once can not verify lies, but one can prove it. Think about it.
But, you appaer begging for an explananation. According to journalistic standards, they are lies. A claim comes forward, it is asked of the claimant to provide proof. Either you produce it or you don't. Anything you say will not lend credibility to the claim without tangible proof. No proof, no story, and the claim is discarded and the source is marked as unreliable. Just like you. Your late attempts at saving face serve only to dig your hole deeper, such as the ignorance you shared concerning FCC lawyers.

>Since I can't verify the existence of your brain then, according to your logic, it doesn't exist. Sorry I made it so complicated for you. <

But everyone that frequents the ng can see the
lies you tell and lie about some more. Do you have an alcohol problem, Kev? You seem to be incapable of posting and focusing on any issue except for your intense personal dislike of me.

>I thought you don't make personal attacks TwistyBoy. Now we've added hypocrisy to twisting. <

It was a quesion, and you opened the door. I never said I don't get personal...matter of fact, I have always held that I return what I get. If you have a problem with it, you should dig what you are dishing out.

>They, like I have said, can see that you are the TwistMeister.<

They most certainly can, Kev, and all that have met me and most that have been around here any length of time also know I don't lie...period.

>No, you don't lie. You twist someone else's words around and call them a liar. <

You said 27, Kev..not me. You said "Busts", not me. You said you I began the insults, when I showed it was indeed you that began calling names. You said you assisted in getting them all to appear in federal court since the 27 of December, not I.

>Misrepresentation is the same as lying Twistyboy. Above is a perfect example. Now you say that I claimed convictions. I KNOW I never said that.<

Right, you said "busts." and clariied as much.

>So you say that I am incapable of focusing? <

Absolutely! Of course you are. You have now resulted to insults in each of your postings.

>Let's see. The original title of the thread was the I claimed 27 busts this year. Where has it gone from there. FCC OFFICIAL OBSERVERS, convictions, busts....<

Which has nothing to do with insults in all your posts, but you quickly seem anxious to glaze over this and change the subject yet again.
Also, you chose to focus on those instead of your big lie of 27 busts in Texas and your assistance in gettiing them ALL to federal court since the 27 of last December.

>that the FCC has administratively decided that the listed radios are
>'Bad Juju' (even thought they were at one time legally imported into
>the US), and not to be tolerated even in the hands of licensed
>amateurs.

I gotta say, I have a hard time believing that I cannot use my AR-3500 or Lincoln (HR-2510) legally on 10-meters. I've worked plenty of folks on 10 who were using the same rig. I wonder where we are in the FCC's list of priorities wrt enforcement? I was under the impression that a properly licensed US ARO could use Radio Moscow's transmitter if he/she could procure it and operated within his/her band and power limits. I also find it odd that the ARRL has reviews of said equipment, including the infamous Ranger RCI-2950DX...and that's recent too. If I find this to be true, I'll retire them to my "museum," a display case that holds my radio past.

>Check out

I wholeheartedly believe that, Aaron.

>Regarding Grant, J.F.K., Jackson and Lincoln, etc. You have to ask
>yourself....why hams would want to buy "10 meter radios" with 1-40
>"channel knobs" and 15 khz steps?

Speaking only wrt the Lincoln (HR-2510), I've made allot of contacts on 10 with 5 as the least significant digit of the frequency. Dunno, maybe because there are actually more of these rigs being used on 10 than is commonly believed. As to the "channel knobs," (Actually displays.) the manufacturer's are almost certainly targetting 11-meter ops as well. No argument there. BTW, that's 10 KHz steps and it's variable from 1 KHz through 100 KHz without having to go to the RIT, on the AR-3500 and Lincoln at least.

1227. Re: Kevin Muenzler, WB5RUE claims 27 radio busts this year alone,...

Newsgroup: rec.radio.cb
Date: 2002-07-15 15:31:38 UTC
From: twistedhed@webtv.net
Message-ID: <7437-3D32EADA-258@storefull-2312.public.lawson.webtv.net>
Source record: 130258

Muenzler, not caring what I believe,
replied in his 7th unanswered response to me in 2 long,twisty obsessed days:

>I've learned that one of you twisting tactics is to quote (and I use that term VERY loosely) out of context, which you have just done. <

You said it, I quoted it. It's not my fault you have pisspoor communication skills and can't express yourself without getting frustrated.

>At that point you were on the idea that I had claimed to have busted someone. I didn't and this sentence doesn't say that either. <

But in your post you said "NEVER". Now you are attempting to say "USUALLY".
The two have separate meanings and are NOT interchangeable. So we now have you lying after I told you that you had said it. You instantly denied it (you LIED).

>Again, "quoting" out of context and combining two issues. You accused me of saying that I was an "FCC OFFICIAL OBSERVER." What I said is that I never said that I was an "FCC OFFICIAL OBSERVER."<

No silly, what you said, once again is, "It was me and 14 other official FCC observers..."

>What I USUALLY say is that I am an Official Observer <

What you usually says means nothing. What you did say is everything.

>(notice, FCC not there). <

Yea, I noticed you have dropped it since I pointed it out.

>But what I am is a volunteer member of the FCC Amateur Auxiliary which can be said to be an FCC Official Observer. <

By you.
The FCC doesn't use the term when referring to you, neither does the ARRL..I checked.

>I USUALLY don't say that. <

But you did. You might not usually lie too, but you did, too.

>It's still true I am an FCC OFFICIAL OBSERVER as a volunteer in the FCC Amateur Auxiliary. Twist it as you want. You can call me an "FCC OFFICIAL OBSERVER," you can call me an "OFFICIAL FCC OBSERVER" (which is

intuitively incorrect because I don't observe the FCC), you can call me a "MEMBER OF THE FCC AMATEUR AUXILIARY," you can call me an "OFFICIAL OBSERVER" but you doesn't have to call me Johnson. (maybe that's before your time Twisty.<

Your assumptions preclude your ignorance in many cases. Ray jay indeed. I had to actually show you your own words, and now you say you didn't really MEAN it that way, which is exactly what I have been showing all along...that you really don;'t know what you mean. Your lies have serously muffed you up, and you sit and attack the messenger for pointing it out and merely asking confirmation..

>No, it's you who don't know what I mean, <

Actually, it's you who says something then says you didn't, then I show it to you, and you hang your head and scratch yourself and hurl an insult or three and then quickly bring up another subject or claim you were misunderstood and attack me. You wouldn't be misunderstood if your poor communication skills improved.

see the above response.

>It's confirmed above and the messenger has been
tampering with (twisting) the message, that's the issue here.
  don't refer to Official Observers as "FCC Official Observers" but if you really want to get technical <

No, I don't want to get technical, but i am certain you do, as your mangy tail is caught in the door and you would rather talk about "technicalities" while accusing ME of semantics. No, we will stay with the issue at hand.....YOUR words, more of what you claim you NEVER said.

>Then what's the issue of whether I call myself an OFFICIAL FCC OBSERVER (your words), an OFFICIAL OBSERVER, an FCC OFFICIAL OBSERVER or a member of the FCC Amateur Auxiliary? They all mean the same thing. <

They may to you, but I assure you, your ignorance isn't as widespread as you think.
The "issue" hasn't changed, it's your lies concerning 27 folks in a federal court since Dec that YOU claimed you helped put there.

>It was me and 14 other official FCC observers..<

>we are "FCC Official Observers."
And your point is? So I couldn't remember using those exact words. So what. It's not a lie to say that I didn't say something. <

When you said it, then deny it and tell me I'm twisting your words and deny saying it again, it's a lie.

>I'm sure you've never done this before. <

I have no reason to lie. I was taught this as a young'un and if I did I got the cat o' nine tails.

We do things differently around these here parts..if a man's word ain't no good, neither is the rest of him. A man's word and a handshake is still all that's used among many of us crackers.

>Ok, "you caught me!" Was I lying? Nope. I just couldn't remember saying those exact words.<

Well, that WOULD have been the case, but you accused me of twisting your words, claiming I was a liar for merely claiming what you indeed said. That shows malicious INTENT at the most, and you don't know what you're talking about, at the least.

>Were those exact words a lie? Nope. But I'm sure that this little technicality will become the next issue. <

It's only one of many, and it WAS only a mere technicality until you blew it all out of proportion by saying I was taking it out of context and denying you said it, when in fact you did.
It doesn't matter if you call yourself keystone cops, the fact remains that you are confused and lying like hell. ANOTHER claim you made, then claimed you didn't, then were shown where you did, and are swallowing crow as quick as your mouth will allow me to shove it in.
>Nope, no crow here. <

Just because you can't see what happened to you don't mean the rest of the world has trouble communicating and following.

>Read above. If I had said that I am 73 inches tall
once and not remembered saying it would it be a lie to say that I'm 6'1" tall? Nope because both are true.<

But you denied you said these things. Since it wasn't true, it effectively reduces your flawed analogy to that of nil.

>Again, you are arguing semantics which seems to be the only thing you can argue. <

You're arguing...I'm showing you where you are muffing up with each passing post.
And they are not semantics, Kevin.

>Sure is! Whether I say I am an OO, FCC OO or Official FCC Observer doesn't make a difference. They are all true. <

They were lies and shown as much. I am beginning to wonder if you even know what semantics are.

>You are arguing nothing more than semantics which means you arguments are over the phrasing of what I said and not the meaning of what I said. That's what it means to argue semantics.<

You are making these mundane items the focus here, not I. I prefer the meat of the matter, the lie where you claimed 27 in federal court on radio related charges/infractions, all made to appear, and all since the

27 of December...
Now you are
attempting to debate another subject, one of what you MEANT to say, one of which you are now attempting to imply you meant.

>Oh, the way that you IMPLIED that you want money for information that you had already obtained? Semantics?<

Not at all.....as you said, as "I" obtained. You appear to want something for nothing, like all freeloaders. You don't want to work for it yourself but are too cheap to purchase it, asking someone else to do your work.
But the issue was,
and still is, you, are a liar. You asked for proof, I gave you several examples.

>No you argued that I said something about being an OFFICIAL FCC OBSERVER.<

Effectively, too, I might add.

>I haven't seen one bit of proof about anything else. You said that I lied about the "busts," where's the proof? You have "pinned me down" on the phrasing of something that I said and nothing more. <

I've pinned you down on several claims you made then recanted. You would rather harp on one that appears benign to you as opposed to actually discussing your lie concerning 27 people you assisted in getting to federal court for radio related infractions all since the 27 of Dec. You call it semantics, the fact remains that you referred to yourself as an FCC observer, then turned around and lied about it, claiming you NEVER said it, that it was a figment of my imagination.

>Is this the only song you know?<

It wouldn't be an issue if you never said it. You compounded the matter by denying it after you said it.

> Get over it, <

It also appears itis YOU that can't get over anything, frittering away attempting to explain all your lies and incorrect denials. That's quite different than what one would expect from one who didn't care WHAT I believed.

>you are arguing semantics
over what I had forgotten that I had said. <
I
f you had merely forgotten it, you wouldn't have hurled insults my way when I pointed it out.

>Like I said, and you ignored, I don't usually say "OFFICIAL FCC OBSERVER" so I had forgotten I had said it. So what if I did say it, it's true. You think you've pinned me down over a semantic issue. Grow

up. <

I've pinned you down over lies...several of them.
...
>Check out: http://www.arrl.org/news/stories/1999/04/08/3/ The title of this article is "FCC Official Acknowledges OOs Really Are 'Official'" <

They may be "official", but the designation of FCC is NOT to be found anywhere
in the title by them. It is YOU that chose to refer to yourself as such.

>Also: http://www.arrl.org/FandES/field/org/oo.html No, we are not paid by the FCC to technically (you seem to love technicalities) we don't work for the FCC. We are volunteers. The results are the same, busted illegal operators.<

Nevertheless, you said you NEVER said it, that it was a figment of my imagination. Not only have you demonstrated your fondness for lying, but you have demonstrated beyond a shadow of doubt that you can not be impartial when it comes to legal issues or agendas and have no business being in a position of authority. Your meted insults may serve well filed with a complaint concerning your integrity and ability to remain fair involving anything that calls for offical judgement on your behalf.

>BWWAAAAAAHAAAAAHAAAAAHAAAAA! You are truly a legend in your own mind Twistyboy! <

This isn't about me, as much as you wish it to be, it's about you failing to produce any substance concerning your lying claim of assisting the ARRL in an official capacity in attaining federal court appearances for 27 radio related violators all in Texas since Dec 27.

Moving on...we have your amusing snap:
>"BZZT! Strike two. I never claimed a single bust. Again, a product of your imagination." <

But again, from your first post, we have not only you denying the "prosecutions" but actually CLARIFYING that they were busts. Let's see...
>""I don't believe I ever said successfully prosecuted I said "busts." If I did then it was misleading and unintentional." <

>You are taking me out of context again.<

Again? If anything, you took yourself out of context, but since that is an improbability, it is safe to point out that they were deliberate lies They may not have been all malicious at first, but when you become so angry that you deny everything you said, it shows you a liar. What part of you claiming you did make a bust then you didn't make a bust, or what part of you denying you never called yourself an official FCC observer when in fact you did and denied it, or what part of your other lies do you feel were taken out of context? I mean, YOU made the claims, then deny them. Are your communication skills that poor that you fail to

express yourself, can't find the correct words? Attempting to blame your lies on your poor communication skills might fly with a newbie, but you've been around for a while....lying. BUT, you run on ahead and try and convince the world at large that you were quoted out of context each and every time. Call me when you think you were successful.

>Ok, you got me on this one.<

I got you on several so far. And you never even had the good grace to admit it.

>I never said that I made busts. That was your twisting. <

No it wasn't..here it is again....your quote:
>""I don't believe I ever said successfully prosecuted I said "busts. If I did then it was misleading and unintentional"<
So you not only said "busts", but clarified it by saying you never claimed they were prosecutions, but merely busts.

>But please feel free to scan this entire thread (and the previous one) to see if I did claim making busts. <

I just showed it to you. Ease up on the liquor.

>It's not my communication skills but your reading and interpretation skills (twisting skills) that are in question here. Apparently you (and maybe Moped) are the only ones having trouble understanding what I said. I never said that I made busts. <

Nope, you didn't. What you actually wrote, verbatim (again) was:
>"BZZT! Strike two. I never claimed a single bust. Again, a product of your imagination."<

>Now that you admit that I never claimed to have made busts I suppose this part is settled. <

But, we find you CLAIMING, it WAS a bust, after yet ANOTHER denial that you never said it...
To wit:
>"I don't believe I ever said successfully prosecuted I said "busts." If I did then it was misleading and unintentional." <
Oh, so once again, you said it, but didn't mean it, but didn't mean it, but said it, but meant it and didn't believe you said it, then just denied it, and are back claiming you didn't mean it when in fact have been shown you said it. We know, Muenzler, we know.

>I said that I participated in busts. <

Bullshit, Kevin..here it is again...>"I don't believe I ever said successfully prosecuted I SAID "BUSTS." If I did then it was misleading and unintentional.<

And then made several posts that they weren't "busts" at all, that the word "bust" was my choice. I once again showed that to be another in a

long string of bold-faced lies, and now you have flip-flopped yet AGAIN, and are attempting to convey and palm off your twisted definitions of busts, claiming once again, that they did happen, but not in the manner in which you applied the term. That's all nice and stuff, but, just like you denying calling yourse;lf an FCC observer, that really isn't the issue, is it Kev 'ol boy? No, the issue is (again) many of your claims have been shown to be lies. Where there is smoke there is fire.

>Ok, I'll bite on this one too. Since you are having such a hard time understand the meaning here's how it works. I am a witness providing evidence for a bust that the FCC makes. Yes that means I participated in a bust.<

Oh, now it's a single bust? Not 27 like you originally claimed? Not all in federal court since the 27 of December? Involved in 27 ongoing cases all at once, you must be the first witness in history to be involved in and testifying on that many separate cases simultaneously.

>I was not there, I did not deliver the notice, I did none of the "cop" things but I certainly participated in the effort. Twist that as you wish.<

Just clarify it, how did you participate? And...you said 27, now you're talking as if it's a single bust. Big difference. Where's the other 26?

>Only the FCC can make the busts. <

But YOU used the word.

>Like I have said a couple of times, me and
several others provided
evidence for these busts. We never made the busts. You are arguing semantics and taking me out of context. <

You never made the busts, but you sure lied like hell. You said you never said things, Kevin, and have been shown you did. You can't even own up to them and fail miserablly trying to worm your way out of lie after lie.
Lie upon lie upon lie....

>Ditto on what I said before. Twist upon twist. Truly a legend in your own mind.<

Yet another hammie truly obsessed and concerned with what a lowly cber thinks of himself. You will fare much better around here, Muenzler, when you learn this isn't a personal issue.

>When did I say it was a personal issue? <

Insults and your concern with what I think of myself is quite personal.

>Nope, <

Oh, yea, it really is.

>never said that or even eluded to this. Again your imagination is getting the best of you. <

Your actions speak louder than your communication-challenged words.

>You were the one claiming that I personally disliked you.<

You insult people you like? You insult everyone you debate or who disagrees with you? Do you insult all who remind you that you actually said something you denied saying? It figures, as this would follow sui with your piss poor communication skilss and in not being able to effectively convey what you mean.
Maybe people like you and Frank
have no family or life so you make us your world, and assign likes and dislikes to us all.

>I know what your problem is, you have Bipolar Disorder. A bit of Lithium will take care of that.<

Drug and alcohol free. Won't even take an aspirin. Those chemicals will screw ya up more than anything, but I see you are of the mindset that drugs are the answer to your problems.
You really need to get over yourself. I am just now learning this fractured ego thing in hammie radio has quarantined more than just certain nocodes. I believe you're the highest ranking AKC member I have seen to date that is so obviously angered at what he has no control over. You need a ranking, since you obviously are the highest of the pioused.

>You got me on this one. Twist it a different way so that a person with normal reasoning can understand it.<

A person with normal reasoning has seen you're already sunk.
You have the highest level of hammie stature among your new circle of fiends. You're king of the nocodes 'round here.

>I'm still waiting on those phone numbers, names and court names. <

And I don't work for free.

>Yeah right! I'm not as stupid as I think you are.<

But your insults are actions that prove otherwise.

>Post the information and send me a bill.
  Look up my name and address in the FCC directory. You have my callsign. <

Gladly pay me Tuesday for a hamburger today.
I'm tempted to post a single link proving you wrong yet again with another claim, but you'll just call it semantics.

>Post it! No guts no glory Twistyboy. Go out on a limb.
Kevin, WB5RUE<

If there was an actual need, I would do it. What you fai to recognize, is just how many ARRL members are actually watching this thread and cringing every time you post, hoping you don't slop things up any worse for yourself or them than you have already managed..
There are several members present here, as well as a few hammies who would love nothing more than my freebanding azz to eat some of that nasty crow I been shoving down your/their throats. If anything you claimed concerning this bullshit was true, it would have been posted long before I had to disprove it. Not one hammie or ARRL member has spoken up for you, Kevin..they want no part of this one, as they know what time it is and they sure as hell don't want in on any of the mess you created for yourself.

To which Twistyboy Twisted:
I agree. Muenzler is the one that originally mentioned money needed to
exchange hands in order for information to be had.

>Wrong Twistyboy! YOU were the one who brought the idea of money into
this. You LIE again.<

Sigh! Kevin, not only are you a liar, I now believe you to be a drunk.
YOU were the first one that brought up the subject of money, claiming
that these courthouse services were only available for a fee. Since that
is what you believed, what makes you think I will give you the
information free?
Following the thread the last few days, I'm not at all concerned with
the general consensus, but you should be. Nevertheless, I even accept
personal checks, but there will be ten day hold on all out of state
checks and a 25.00 NSF fee.

>Were these NOT your words? <

Absolutely...long after you claimed certain information cost money to
collect.

>You accept personal checks for what?<

My services.

>But to get back to my original challenge; Names, Phone Numbers.....
Kevin, WB5RUE<

Of course. And to get back to mine......How many results I provide will
be up to you. One will get you one in return. After all I asked first,
you should answer first, it is common decency and etiquette, which you
have proved you have none by sitting here replying to posts by me
Friday, getting no response, trying again Satrday, getting no response,
and finally again on Sunday, with still no response. All this from one
who claims he doesn't care what I believe.

news:<CPkY8.65373$JU3.24962937@e3500-atl1.usenetserver.com>. Basically,
most of us don't CARE what the CBers do below 28 MHZ.
Very true, historically, hams don't care about what CB'ers did on their
own CB "property".<

No. That's not what he said, yet you lent yourself in agreement but fail
by attempting to set forth something other than what you claim to agree
with. Regardless your bias, the fact remains, most hammies don't care
what happens below 28 MHZ, "property" or not...next time, try not to
speak for another and you won't come off so unrefined.

>Because of this, CB'ers moved on to trashing the "neighbors property",
too. <

How you arrived at your mistaken conclusion, nobody even cares..I base
this on how many ask the questions you pose to yourself.

>I'm not saying that hams should be vigilantes or do the FCC's job of
policing the spectrum, <

It doesn't matter what you say.

>but I think that when you see<

And it damn sure never mattered what you thought.

>a neighbors property being trashed <

Tangible vs. a "what-if" non-sequitur...you're getting desperate...like
you're all outta wind.

>noyou shouldn't wink <

YOU should get over yourself and this compulsion you have that causes
you to feel you have the right to tell people what they should and
shouldn't do. It's definitely an inferiority complex shining brightly on
you underground.

>and grin at the vandals and tell them "As long as
you leave my place alone I don't care what you do!" because, sure as the
sun rises, they'll be coming onto your property next. <

Do you take this view with world politics or just domestic radio
hobbies?

>Being a good citizen benefits everyone. <

Your definition of a good citizen means something only to you, evidenced by your underground status. You were so embarassed with yourself, so ashamed, so unable to control yourself among the lowly cbers, you were forced into exile.

>Like it or not, the two services (CB and ARS) are inextricably linked, and the more mature of the two has a responsibility to be aware of what goes on in "the neighborhood".<

Balderdash.
Hammies have no more responsibilty
with cbers than you do with anything.

>Do a search on "Kitty Genovese" for an interesting analogy.... -A <

Your analogies have all been flawed.

Since you choose to pose questions to yourself and answer them yourself, there is no harm in believing yourself.
  Just in case you are hoping some unsuspecting soul may make up their mind whether to operate what you deem illegal or not, I'll disseminate the BS you have posted below. You should present the entire picture and not just that of which you agree.If you were more honest and didn't intentionally try to spread so much disinformation you wouldn't have to contend with what you do.

>A. You may unknowingly cause interference to legitimate communications. Many of these frequencies may appear, to the casual listener, to be unused.<

And indeed, many of the frequencies
are unused.

>Some of the authorized users may be using emission types which can not be plainly detected.<

And some of the users are no more than
freebanders. Some of the frequencies are empty and deserted.

>Or, their transmissions may be intermittent. <

Or there may be no transmission at all.
There may be no "they".

>You will not hear any legitimate signals within the designated radioastronomy bands. <

Posting said bands would carry more weight than anything you could possibly muster to the table.

>However, just because a frequency sounds clear, that does not mean that it can be used without proper authorization. <

Yup. And just because a certain frequency is not part of the cb or hammie band, doesn't mean it's NOT safe to talk on.

>Q. What are these other frequencies between 24 and 32 MHz used for? <

Again, you ask a question for your entertainment only. I decimate them for mine.

>A. These frequencies are assigned to many different licensed radio services, both in the United States, as well as in other countries.<

Not all of them, not even the majority of them.

>Authorized users include Maritime and Aeronautical radio stations, standard time and frequency stations, international broadcasting stations, amateur radio, and government stations. A portion of this spectrum is also allocated to radioastronomy, where scientists are attempting to listen to very weak radio signals coming from distant stars and galaxies.<

Look, stargazer.....the freeband portion of spectrum you speak of that actually gets used is incredibly small. We had this debate before and you were going to produce some proof from a company, any company, that was using a freeband frequency indicated and assigned, that suffered from interference due to freebanders. That endeavor died as quick as your claims.

>No radio transmitters of any kind are permitted within these radioastronomy bands, so any earth-bound transmitted signals can completely disrupt radioastronomy observations. -A<

Post the freeband frequencies you feel are threatened by freebanders and don't hesitate to cite an incident. Personally, I think your fears are on the same level as your expected reply resulting from your search for the andromeda creature.

I have no argument with what you say. It's well thought out and concise.
But note, I said "RARELY." But what I should have also included (maybe I
did) is that when I say that "RFI is rarely the fault of the transmitter" I
mean legal, stock transmitters that have not been modified and are operating
in accordance with their original design. CB transmitters are NOT designed
to be operated behind an RF power amplifier. If they were then the
manufacturers would have to build into them much cleaner oscillators and
have much better isolation between the various IF and mixer stages. While
CB transmitters meet the FCC's MINIMUM standards that's all the have to do.
As you stated when you place one behind a "linear," and I use that term very
loosely since most CB amps are not linear, not only do you amplify the

intended 27MHz signal but EVERY other signal that comes out of the antenna, including all of the phase noise created by the poorly designed PLL circuitry.

In my experiences I can't think of very many instances where the RFI was caused by a PROPERLY OPERATING transmitter. The latest is with a digital satellite TV that I just installed. I could key up on 2-meters and the system would go "dead." The signal strength would go to zero and the system would completely lose the lock on the satellite. When I would unkey it would come right back. No I wasn't running a KW but only 50 watts into a J-Pole that was 100 feet from the dish. What was the cure? Three 8" loops in the coax feeding the dish. Now the signal quality and signal strength indicators don't even budge.

THAT has, indeed, been discussed and, yes, CB radio is stuck in 1958--right
where it started.

Again, they are just a cber that is operating illegally on the ham
band.

Could be. In the days I had anything to do with 4CX5000s they were generally in commercial FM service. The power supply was a 3-phase bridge running about 5.5kv @ 1.25 amps. Ah the glow of the 866/872 mercury rectifiers at 2 AM when the nitrogen ran out of the coax and the stripline final tank melted.

Ahhhh, Dick ... reminds me of the time I had sign off and the following sign on at a commercial radio station down in (was it Elkton?) Maryland. Stupid alarm clock didn't go off and I woke up - and it was 60 seconds before sign on! Fire the filaments, turn on the consoles, and pray like heck the mercury vapors would hold when I hit 'em with the hv for the plates. You would have laughed as I ran around like a chicken with its' head cut off ... where's the stupid sign on tape? Grab a couple of records. Rip paper off the teletype. Keep watching the seconds tick down ... pray ... better throw in a 'Hail Mary' as well ... gawd, I need a carrier ... with the dumb things hold after only 30 seconds? Console is working. One more 'Hail Mary' and hit the switch and ducked. Nothing happened. Oh yes it did! A BEAUTIFUL carrier! Hit the tape deck with the sign on and go to the john to clean out my drawers. It was a sight to see (well, maybe not cleaning out my drawers)!

OK, you asked for this: Twisted, this is NOT meant as a flame, but is
directed
at Kenneth, and Kenneth alone. Let's look at your allegation that "CB has
'legiti-
mate' commercial use wher (sic) Ham has no legit use are are truly toys."
If what
you say is true, then WHY did the emergency services people ask for Amateur
radio support when the Twin Towers fell and NOT CB? Why did the Dutch
family
whose yacht was attacked by pirates ask for help from the Amateur's Maritime
Mobile Service Net instead of screaming on a CB "BREAK THAR ON THIS H'YAR
MERCY ME, GRE'T DAY 'LIVE THAR CB THAR, YUH GOT AN OLE COPY THAR, MERCY ME
THAR, SHORE THANG THAR, KICK HIT
BACK THAR, BREAK! SQUEAK!! ??????? Hmmmm? Tell me! How come I
don't see a CB desk in the state Emergency Operations Centers alongside the
RACES and ARES desks (Both are HAM organizations.) Why were the HAMS
at work in Colorado during the fires while I haven't heard one damn word
about
CBers manning radios and passing health and welfare traffic for families as
well as
providing backup for the regular communications channels? I can just hear
it now:
BREAK THAR ON THIS HYAR COLORADO COWBOY THAR, MERCY ME THAR, WORLDWIDE,
WORLDWIDE THAR, HOW BOUTCHA THAR OUT T'ERE IN THAT T'ERE SKIPLAND THAR,
GRE'T DAY, WE A-TRYIN' TUH PASS THIS H'YAR HEALTH AND WELFARE TRAFFIC
RI'CHERE IN THESE H'YAR COLORADO 'F'ARS (fires), BREAK, GIT BACK THAR!
SQUEAK!" The EOCs would be keeled over in the floor overcome with laughter!!
CB has "legitimate' uses while ham has no legit use?

HA! Give me a break! How come the Feds felt it important enough to pass a regulation that gives hams a minimum of protection from local zoning laws that
restrict Amateur antennas? How come States are gradually codifying this rule?
(the FCC # is PRB-1). Oh, BTW CBers aren't covered by this rule. CB is so "important", right? I wonder why they didn't include CB? How come there is a bill in Congress right now to exempt hams from CC & Rs--those pesky housing
and condo rules that prevent external communications antennas? So far, its outcome looks pretty favorable. Of course, builders and condo associations are
fighting it, but, with all the favorable press ham radio has had in Congress and the
fact that it HAS been recognized as a valuable communications resource both be-
fore AND after 9/11, it will likely become law. Funny thing: I haven't heard a thing
about "protections" for CB radio like I have about ham radio. Wonder why that is?
Even REACT is a dying breed; never see them around here. Could it be that Amateur Radio has such a cadre of trained, disciplined operators, such a fine record of responding to emergencies and providing effective communications that
REACT has nothing to "react" to??? MMffffffff! HAHAHAHAHAHA! Sorry for the outburst, I just couldn't hold it in! During the CB craze, many police and county
dispatch centers did, indeed, install, CB radios. I asked a local friend if they still had one in the radio room and he said, "Hell, NO! That stupid thing drove the operators crazy with all that noise and ridiculous lingo"!
<<mmmmfffft! ggg--now
control yourself, Jerry>>

Tell me, what is so exciting about a hick yelling the same thing over and over and over and over, squeaking and beeping and using goofy slang phrases. Now THAT's boring. How come it is that I see lots of CB ops list their equipment in their sig and all of it is B O U G H T stuff? Overpriced BOUGHT stuff? One of
those "BIG COIL antennas--I can make for $10.00. Want an antenna for ANY frequency from DC to daylight? Lotsa hams make that, too! Sure, some CBers do the very same thing. Not the vast majority. Can YOU explain what "impedance" is? Can you effectively argue that coax length doesn't matter, and PROVE what you say is true (of course that person would have to be shown live
and in person---not just my word). There are exceptions (phased antennas, etc),
but it doesn't matter, and I can prove it in person. How many "resistances" must
a radio signal pass thru in your antenna system? Name them? There IS more to

radio than yap, yap, yap, yap, yap.....

I would bet (if I were a betting man--I don't even play the lottery) that if you asked
about all those Congressmen and "Presidents" that worry about truckers' lobbies,
asked them about the relative importance of the 2 radio "hobbies", you would be
shocked to find that Amateur Radio does, indeed, hold a higher level of esteem among the powers that be than CB radio. Truth is, CB radio is regarded as a kind
of "cultish, lowboy" toy that has numbers, but very little substance or importance in the relative pecking order. It IS a toy. Ham Radio is a toy--part of the time, but it can rally professional, organized communications where CB just can't. CB has also garnered a black eye because of the interference and "rebel" attitude regarding the laws governing its use. If you REALLY knew somebody inside, you might find that the bigwigs would LIKE to find a way to get rid of CB radio -at least, in its present form. And it *may* happen, the way things are going. I could just about guarantee that CB is NOT going to "take over" anything as you like to troll. Radio usage is a (read it carefully now) P R I V I L E G E granted by the government, not a right. You have a right to free speech, not a "right" to use a radio. That privilege CAN be taken away..just like it can for hams. There are discussions right now about sunsetting CB radio and encouraging the use of FRS and MURS instead.

You inflate the importance of trucks and the CB radios they use. For what you
actually use them for, FRS would actually work better. At low power, more trucks
could be on the same channel at the same time without bothering each other. As to
trucks bringing the economy to its "knees", you forget that much of that material now hauled by truck can be put on trains. UPS now ships its trailers on piggyback trains in the US, and Norfolk Southern Railway has something called Triple Crown
Service where there are NO railcars underneath the trailers! The trailers have rail
wheels as well as road wheels, and it is a simply a matter of hooking a locomotive to a long string of these and hauling them to their destination. And if you think ALL
railroads are broke and ineffective, you'd better check again before giving inac-urate information. There would be some disruptions, of course, in the event of a truckers' strike, but much of their haulage can be moved by train--enough to prevent the widespread harm done if truckers quit driving. BTW, I worked in the
rail industry for 23 years before retirement and I know what I am talking about. The rail industry would LOVE to see you strike over a "radio" issue. Or any issue,
for that matter--they'd welcome the extra business!!

Now I have my flameproof suit on. But, Kenny, you brought on this
"debate".

You don't realize that police radios are either on VHF Low band (42-46 MHZ)
FM or VHF Hi (155-160 MHZ) FM. They are not compatible with CB radios.
Maybe they are "quite powerful" because they have a professional installer
at the
radio shop that doesn't "tweak and peak" them like the CB butcher shops do?
If they are operating illegally, don't think for one minute that, if FCC
gets wind of
it, they wouldn't send the department a warning. I recall a Sheriff's
office receiving
such a warning about interfence to a ham repeater on the RainReport sometime
back.

BTW, go up the threads a bit where I posted those 20 warnings and citations
and
fines. You obviously haven't read them yet. Many of them are truckers and
their
employers.

What do you think "convection" is? It's the movement, keyword here is "MOVEMENT" of air produced by a difference in temperatures. If there is air movement then there is air flow. Is heatsink in a closed box where confection isn't possible? Posting one line out of context makes meaningful comments difficult.

Nope, But I know someone, back in the day, before riley hollingsworth came on the scene, back in the days of the 3.895 war, (between 3895 and 3.901), and the gator stakes... He used to run on of these, in class AB1.. and I know of a guy now, who has 3 phase power in his Garage, and he's a 75 meter dude, is seriously thinking of building something with one of these... If and when it's built, I'll post pics of it here... He's thinking of driving it with an L4B or an L7... and would be using hardline to feed the antenna. antenna would be a dipole cut to frequency, with 8 or 10 gauge wire...

Stay Tuned.

OK, sorry. Can you give me any specific examples of why it's lame and
where it needs tweaking and how one might do better? :)

Oh I'm sure you "know someone". You're probably even one of the dunces
whose license has been yanked by Riley for those shenanigans.

You mean "stay tuned for more BS from outlaw anarchist power-junkies
who are afraid to even say what STATE they're in on their ebay
auction"? No thanks.

OK, that link is a bit long for most people to use so try
www.seerustysquirm.shorturl.com which is much easier. Makes for
interesting reading.

news:uj4d6j2qfe3a40@corp.supernews.com...
I agree totally Rich. I went to the QRZ.com site and did a search for
msgs on cb 11m etc and those losers make voob look human! Apparently
only the best of the hams come to this ng. This is one of the best and
most enjoyable ng's around. Ever visit alt.ham.dx? Its maybe a hundred
posts(compared to 31962 here) and most posts where "where is everybody"
        The funny thing is that the subject of cb gets
more posts then anything else among the Hams. Hams talk more about cb
and freebanding then anything else.
Ofcourse both Ham rigs and Cb rigs are toys. CB has legitament
commercial use wher Ham has no legit use and are truely toys. CB is one
of the most exciting hobbies out there and even Hams recognize this.

>OK, you asked for this: Twisted, this is NOT meant as a flame, but is
directed
at Kenneth, and Kenneth alone. <

Hey, no sweat bud, I'm just chillin' checkin' out the scenes and
groovin' on the discussions,.. s'cool!

>Let's look at your allegation that "CB has 'legiti-
mate' commercial use wher (sic) Ham has no legit use are are truly
toys." If what
you say is true, then WHY did the emergency services people ask for
Amateur radio support when the Twin Towers fell and NOT CB? Why did the
Dutch family
whose yacht was attacked by pirates ask for help from the Amateur's
Maritime Mobile Service Net instead of screaming on a CB "BREAK THAR ON
THIS H'YAR MERCY ME, GRE'T DAY 'LIVE THAR CB THAR, YUH GOT AN OLE COPY
THAR, MERCY ME THAR, SHORE THANG THAR, KICK HIT
BACK THAR, BREAK! SQUEAK!! ??????? Hmmmm? Tell me! How come I don't see
a CB desk in the state Emergency Operations Centers alongside the RACES
and ARES desks (Both are HAM organizations.) Why were the HAMS at work
in Colorado during the fires while I haven't heard one damn word about
CBers manning radios and passing health and welfare traffic for families
as well as
providing backup for the regular communications channels? I can just
hear it now:
BREAK THAR ON THIS HYAR COLORADO COWBOY THAR, MERCY ME THAR, WORLDWIDE,
WORLDWIDE THAR, HOW BOUTCHA THAR OUT T'ERE IN THAT T'ERE SKIPLAND THAR,
GRE'T DAY, WE A-TRYIN' TUH PASS THIS H'YAR HEALTH AND WELFARE TRAFFIC
RI'CHERE IN THESE H'YAR COLORADO 'F'ARS (fires), BREAK, GIT BACK THAR!
SQUEAK!" The EOCs would be keeled over in the floor overcome with

laughter!! CB has "legitimate' uses while ham has no legit use? HA! Give me a break! How come the Feds felt it important enough to pass a regulation that gives hams a minimum of protection from local zoning laws that
